Some Topological And Geometrical Structures In Banach Spaces Memoirs Of The American Mathematical Society 378:

Some Topological and Geometrical Structures in Banach Spaces Nassif Ghoussoub, 1987 In this memoir we study the interrelations between the topological measure theoretical and geometrical structures in certain classes of Banach spaces The focus is on those spaces whose bounded subsets have arbitrarily norm small convex combinations of slices This class contains spaces with the Radon Nikodym property as well as B convex Banach spaces The topological analysis leads to the concept of first class functions around sets This extension of the classical notion of Baire 1 functions is developed in a general non linear setting *Introduction to Banach Spaces: Analysis and Probability: Volume 1* Daniel Li, Hervé

Queffélec, 2017-11-02 This two volume text provides a complete overview of the theory of Banach spaces emphasising its interplay with classical and harmonic analysis particularly Sidon sets and probability The authors give a full exposition of all results as well as numerous exercises and comments to complement the text and aid graduate students in functional analysis The book will also be an invaluable reference volume for researchers in analysis Volume 1 covers the basics of Banach space theory operator theory in Banach spaces harmonic analysis and probability The authors also provide an annex devoted to compact Abelian groups Volume 2 focuses on applications of the tools presented in the first volume including Dvoretzky's theorem spaces without the approximation property Gaussian processes and more In volume 2 four leading experts also provide surveys outlining major developments in the field since the publication of the original French edition Introduction to Banach Spaces: Analysis and Probability Daniel Li, Hervé Queffélec, 2018 This second volume of a two volume overview focuses on the applications of Banach spaces and recent developments in the field **Introduction to Banach Spaces: Analysis and Probability: Volume 2** Daniel Li, Hervé Queffélec, 2017-11-02 This two volume text provides a complete

overview of the theory of Banach spaces emphasising its interplay with classical and harmonic analysis particularly Sidon sets and probability The authors give a full exposition of all results as well as numerous exercises and comments to complement the text and aid graduate students in functional analysis The book will also be an invaluable reference volume for researchers in analysis Volume 1 covers the basics of Banach space theory operator theory in Banach spaces harmonic analysis and probability The authors also provide an annex devoted to compact Abelian groups Volume 2 focuses on applications of the tools presented in the first volume including Dvoretzky's theorem spaces without the approximation property Gaussian processes and more Four leading experts also provide surveys outlining major developments in the field since the publication of the original French edition *Operator and Matrix Theory, Function Spaces, and Applications* Marek Ptak, Hugo J. Woerdeman, Michał Wojtylak, 2024-04-02 This volume features presentations from the International Workshop on Operator Theory and its Applications that was held in Kraków Poland September 6-10 2022 The volume reflects the wide interests of the participants and contains original research papers in the active areas of Operator Theory These

interests include weighted Hardy spaces geometry of Banach spaces dilations of the tetrablock contractions Toeplitz and Hankel operators symplectic Dirac operator pseudodifferential and differential operators singular integral operators non commutative probability quasi multipliers Hilbert transform small rank perturbations spectral constants Banach Lie groupoids reproducing kernels and the Kippenhahn curve The volume includes contributions by a number of the world s leading experts and can therefore be used as an introduction to the currently active research areas in operator theory

Lord,Fedor Sukochev,Dmitriy Zanin,2021-07-19 This book is the second edition of the first complete study and monograph dedicated to singular traces The text offers due to the contributions of Albrecht Pietsch and Nigel Kalton a complete theory of traces and their spectral properties on ideals of compact operators on a separable Hilbert space The second edition has been updated on the fundamental approach provided by Albrecht Pietsch For mathematical physicists and other users of Connes noncommutative geometry the text offers a complete reference to traces on weak trace class operators including Dixmier traces and associated formulas involving residues of spectral zeta functions and asymptotics of partition functions
