Speaking Minds Interviews With Twenty Eminent Cognitive Scientists:

Speaking Minds Peter Baumgartner, Sabine Payr, 2014-07-14 Few developments in the intellectual life of the past quarter century have provoked more controversy than the attempt to engineer human like intelligence by artificial means Born of computer science this effort has sparked a continuing debate among the psychologists neuroscientists philosophers and linguists who have pioneered and criticized artificial intelligence Are there general principles as some computer scientists had originally hoped that would fully describe the activity of both animal and machine minds just as aerodynamics accounts for the flight of birds and airplanes In the twenty substantial interviews published here leading researchers address this and other vexing questions in the field of cognitive science The interviewees include Patricia Smith Churchland *Take It Apart and See How It Runs* Paul M Churchland *Neural Networks and Commonsense* Aaron V Cicourel *Cognition and Cultural Belief* Daniel C Dennett *In Defense of AI* Hubert L Dreyfus *Cognitivism Abandoned* Jerry A Fodor *The Folly of Simulation* John Haugeland *Farewell to GOFAI* George Lakoff *Embodied Minds and Meanings* James L McClelland *Toward a Pragmatic Connectionism* Allen Newell *The Serial Imperative* Stephen E Palmer *Gestalt Psychology Redux* Hilary Putnam *Against the New Associationism* David E Rumelhart *From Searching to Seeing* John R Searle *Ontology Is the Question* Terrence J Sejnowski *The Hardware Really Matters* Herbert A Simon *Technology Is Not the Problem* Joseph Weizenbaum *The Myth of the Last Metaphor* Robert Wilensky *Why Play the Philosophy Game* Terry A Winograd *Computers and Social Values* and Lotfi A Zadeh *The Albatross of Classical Logic* *Speaking Minds* can complement more traditional textbooks but can also stand alone as an introduction to the field Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Clever as a Fox* Sonja Ingrid Yoerg, 2002 *Researched Clever as a Fox* will challenge your previously held notions about animals and the measure of intelligence both theirs and ours

Self-Organizing Natural Intelligence Myrna Estep, 2006-12-26 *Self Organizing Natural Intelligence* brings new scientific methods to intelligence research that is currently under the influence of largely classical 19th century single causal theory and method This out dated classical approach has resulted in the single capacity g theory a central processor top down genetically determined linguistic view of intelligence that is directly contradicted by empirical facts of human and animal studies of intelligence This book proposes utilizes and demonstrates the research superiority of a highly developed multidisciplinary theory models approach to intelligence With conceptual tools concepts and mathematical methods more

suited to continuous dynamic phenomena of living things the entire scope of natural intelligence based upon empirical studies of actual human and animal experience is addressed Results show that human and animal intelligence is largely self organizing and emergent across a spectrum of major categories of kinds of natural intelligence not limited to a single top down capacity as current proponents of the single capacity g theory and IQ approach support Contrary to the single capacity verbal theory of intelligence this work argues and shows evidence for three major categories of natural intelligence Overwhelming empirical evidence is given to show that our understanding of cognition itself must be broadened to include nonverbal immediate awareness as a category of natural intelligence that is embedded within sensory and somatosensory motor processes that make possible yet another category of intelligence knowing how While most current theories of intelligence assume that the mind is entirely computational and also assume that sensation is cognitively neutral having no intentionality here empirical evidence is presented from numerous clinical studies showing that certain primitive sensory processes are not cognitively neutral nor do they require a representational language interface in order to be accessible to cognitive intelligence processes This volume describes a rigorous treatment and exhaustive classification of natural intelligence while also demonstrating a more adequate scientific and mathematical approach than current statistical and psychometric approaches shoring up the out dated and misused IQ hypothetical construct

What You Don't Know You Know Ken Eisold, 2010-01-19 The unconscious sprang to the attention of the West a hundred years ago and we are still struggling to absorb its full impact It was one thing to understand the concept to see it and believe it but another to live with it to take in fully its challenge to our deepest cultural assumptions Today as we expand our understanding of its reach we are still coming to grips with what it means This new unconscious is driven by the identities we assume the groups we belong to the ideas we inherit the languages we use all the elements that provide meaning and structure to our world What You Don't Know You Know is about this emergent understanding and how it forces us to rethink our relationships with each other as well as our beliefs about what it means to be a person to have a self It is for all those who want a better understanding of the complexity of human motivation whether as an executive faced with employees resisting change an elected official trying to forge agreements among competing interests a consultant brought in to restructure an ailing corporation or individuals struggling to understand their relationships and why they do the things they do All too often our actions do not conform to our explicit intentions or to common sense We are more constricted than we think but sometimes we are also smarter

Conceptual Challenges in Evolutionary Psychology Harmon R. Holcomb III, 2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and to computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time Few areas of inquiry have generated as much interest and enthusiasm in recent times as has the discipline known as evolutionary psychology but its pretensions and its accomplishments have not always been properly understood This collection brings together important work in psychology anthropology and the philosophy of science that contributes toward that goal especially by emphasizing the role of natural selection and sexual selection as crucial factors in the evolution of cognitive mechanisms for information processing The methodological studies that are presented here are bound to enhance appreciation for the scope and limits of this fascinating domain The editor has produced a fascinating volume that should appeal to a broad and diverse audience
