Specificity of Embryological Interactions D. R. Garrod, 2013-12-11 *Specificity of Embryological Interactions* D. R. Garrod, 2014-09-01 *The Specificity and Action of Animal, Bacterial and Plant Toxins* Pedro Cuatrecasas, 2013-12-17
Hormones, Receptors and Cellular Interactions in Plants C. M. Chadwick, D. R. Garrod, 1986-02-06 This book takes a broad look at the current status of research on receptors in higher and lower plants It starts with a discussion of some hormone receptors auxins ethylene and gibberellin in higher plants and then considers the role of cyclic AMP and its receptors in the slime mould Dictyostelium **The Cellular Basis of Morphogenesis** Leon W. Browder, 2012-12-06 This series was established to create comprehensive treatises on specialized topics in developmental biology Such volumes are especially vital in developmental biology since it is a very diverse field that receives contributions from a wide variety of disciplines This series is a meeting ground for the various practitioners of this science facilitating an integration of heterogeneous information on specific topics Each volume is intended to provide the conceptual basis for a comprehensive understanding of its topic as well as an analysis of the key experiments upon which that understanding is based The specialist in any aspect of developmental biology should understand the experimental background of the field and be able to place that body of information in context to ascertain where additional research would be fruitful At that point the creative process takes over and new experiments are designed This series is intended to be a vital link in that ongoing process of learning and discovery If it facilitates scholarship it will serve an important function *Specificity of Embryological Interactions* D. R. Garrod, 1978 *Receptors and Recognition* P. Cuatrecasas, M. F. Greaves, 2013-11-21 This new series is concerned with intercellular communication and recognition It is now widely appreciated that these processes play a crucial role in virtually all biological systems and functions These encompass fertilisation embryonic development infectious interactions the activity of the nervous system the regulation of growth and development by hormones and the immune response to foreign or non self antigens Historically as described in the first review in this volume the general concept of cell associated receptors as the molecular entity primarily responsible for the specificity of signal recognition arose independently in the fields of immunology pharmacology and developmental biology From an early stage the analogy between cellular recognition and the discriminatory activity of antibodies and enzymes was emphasised A vital conceptual advance expressed most clearly by Linus Pauling and Paul Weiss was the idea that non covalent molecular interactions of proteins in particular were responsible for biological specificity in general In the last decade several major advances have led to a new level of understanding of the molecular basis of cellular recognition In several systems in particular with neurotransmitters hormones and antigens it is possible to directly demonstrate the existence of receptors associated in each case with the cell surface These studies have been paralleled by equally important insights into the general structure and organisation of cell membranes and the possible ways in which signals arriving from the outside can be transduced across

the cell surface membrane to induce or regulate the cell's programmed responses Maturation of the Nervous System, 2011-09-22

Maturation of the Nervous System **Biological Physics of the Developing Embryo** Gabor Forgacs, Stuart A. Newman, 2005-11-24 During development cells and tissues undergo changes in pattern and form that employ a wider range of physical mechanisms than at any other time in an organism's life This book shows how physics can be used to analyze these biological phenomena Written to be accessible to both biologists and physicists major stages and components of the biological development process are introduced and then analyzed from the viewpoint of physics The presentation of physical models requires no mathematics beyond basic calculus Physical concepts introduced include diffusion viscosity and elasticity adhesion dynamical systems electrical potential percolation fractals reaction diffusion systems and cellular automata With full color figures throughout this comprehensive textbook teaches biophysics by application to developmental biology and is suitable for graduate and upper undergraduate courses in physics and biology

Purinergic Receptors G. Burnstock, 2013-03-07 Fifty odd years have elapsed since the first observation of the response of visceral smooth muscle to an adenine nucleotide was reported by Drury and Szent Gyorgi 1929 It is now known that purinergic receptors mediating responses to adenosine and the adenine nucleotides AMP ADP and ATP are present in all types of visceral smooth muscle Adenine itself and other endogenous purine derivatives appear to have no direct effects or only minimal effects on most visceral smooth muscles Airway smooth muscle is an exception in this regard and responds to purine bases and non adenine nucleosides and nucleotides Knowledge of the distribution of purinergic receptor sites on the plasma membrane of visceral musculature has grown particularly rapidly since Burnstock and his colleagues 1970 proposed that ATP or a related adenine derivative is the inhibitory transmitter released from non cholinergic non adrenergic nerves present in the gut Much evidence has been presented favoring the view that ATP is the inhibitory transmitter and evidence to the contrary has also been put forward The hypothesis remains controversial primarily because specific blockers of the postsynaptic purinergic site with which the hypothesis might be tested have not been found Nevertheless the numerous studies designed to investigate the purinergic nerve hypothesis have generated much information concerning the nature of the purinergic receptors in visceral smooth muscle
