Speculative Markets:

Macro Markets Robert J. Shiller, 1994-04-07 Macro Markets puts forward a unique and authoritative set of detailed proposals for establishing new markets for the management of the biggest economic risks facing society. Our existing financial markets are seen as being inadequate in dealing with such risks and Professor Shiller suggests major new markets as solutions to the problem. Shiller argues that although some risks such as natural disaster or temporary unemployment are shared by society, most risks are borne by the individual and standards of living determined by luck. He investigates whether a new technology of markets could make risk sharing possible and shows how new contracts could be designed to hedge all manner of risks to the individual's living standards. He proposes new international markets for perpetual claims on national incomes and on components and aggregates of national incomes, concluding that these markets may well dwarf our stock markets in their activity and significance. He also argues for new liquid international markets for residential and commercial property. Establishing such unprecedented new markets presents some important technical problems which Shiller attempts to solve with proposals for implementing futures markets on perpetual claims on incomes and for the construction of index numbers for cash settlement of risk management contracts. These new markets could fundamentally alter and diminish international economic fluctuations and reduce the inequality of incomes around the world. *The Road to Co-operation*

Gordon Pearson, 2016-02-24 This critical and informed protest against the absurdity and dishonesty of neoclassical economic theory as it has progressed through the 20th century down to the present sheds new light on the predicament faced in 2012. In *The Road to Co-operation* Pearson highlights the dangers of using unrealistic mathematical models of human organisational and market behaviour to guide policy prescriptions. He shows the damage done to real economies, markets, firms and people by the unwarranted trust in unregulated markets proclaimed by Friedman and colleagues, promulgated by academia and adopted by the financial-political corporate nexus now dominant in Anglo-American jurisdictions. Though real markets work better than known alternatives, Pearson makes the crucial distinction between the real and the speculative financial where totally different realities apply. Failure to make that distinction has transformed financial sectors from supportive of the real economy to exploitative and sometimes fraudulent. Pearson provides a comparative analysis of corporate governance theory, law and practice in different jurisdictions, including the self-destruction of post-mature Anglo-American governance with the more robust custom and practice in the industrial economies of Germany and Japan and emerging economies of China and India which all exercise care for their real economic strengths and provide object lessons for governance in UK and US. *The Road to Co-operation* proposes realistic changes in policy and practice in the context of sustainability which would be prerequisite to recapturing real long-term economic success on a co-operative and non-exploitative foundation. It will be invaluable for today's business faculty, students and practitioners as well as the madmen in authority. **Commodity, Futures and Financial Markets** L. Philips, 2012-12-06 Louis Philips The stabilisation of primary

commodity prices and the related issue of the stabilisation of export earnings of developing countries have traditionally been studied without reference to the futures markets that exist or could exist for these commodities. These futures markets have in turn been studied in isolation. The same is true for the new developments on financial markets. Over the last few years, in particular since the 1985 tin crisis and the October 1987 stock exchange crisis, it has become evident that there are interactions between commodity futures and financial markets and that these interactions are very important. The more so as trade on futures and financial markets has shown a spectacular increase. This volume brings together a number of recent and unpublished papers on these interactions by leading specialists and their students. A first set of papers examines how the use of futures markets could help stabilising export earnings of developing countries and how this compares to the rather unsuccessful UNCTAD type interventions via buffer stocks, pegged prices and cartels. A second set of papers faces the fact largely ignored in the literature that commodity prices are determined in foreign currencies with the result that developing countries suffer from the volatility of exchange rates of these currencies even in cases where commodity prices are relatively stable. Financial markets are thus explicitly linked to futures and commodity markets.

Market Analysis for Real Estate

Rena Mourouzi-Sivitanidou, 2020-08-06. Market Analysis for Real Estate is a comprehensive introduction to how real estate markets work and the analytical tools and techniques that can be used to identify and interpret market signals.
