Penfield and L. Roberts** Wilder Penfield, Lamar Roberts, **Proceedings; Conference on Brain Mechanisms Underlying Speech and Language** National Institute of Neurological Diseases and Blindness (U.S.), editor. Darley (Frederic L.), Conference on Brain Mechanisms underlying Speech and Language (1965 : Princeton), 1968 *The Age Factor in Second Language Acquisition* David Michael Singleton, Zsolt Lengyel, 1995-01-01 This book takes a hard look at some of the assumptions that are customarily made concerning the role of age in second language acquisition The evidence and arguments the contributors present run counter to the notion that an early start in second language learning is of itself either absolutely sufficient or necessary for the attainment of native like mastery of a second language Another theme of the book is a doubt that there is a particular stage of maturity beyond which language learning is no longer fully possible In short the book presents a challenge to those who take it as given that second language learning is inevitably different in its essential nature from language acquisition in the childhood years and that second language knowledge acquired beyond the critical period is in all circumstances and in all respects doomed to fossilize at a non native like level **Phonological Processes and Brain Mechanisms** Harry Whitaker, 2012-12-06 Phonological Processes and Brain Mechanisms reviews selective neurolinguistic research relating brain structures to phonology The studies in the volume report on a number of timely and important topics such as a neuronal model for processing segmental phonology the role of the thalamus and basal ganglia in language processing and oral reading in dyslexia Increasingly phonology is considered a cognitive module whose brain correlates may be independently investigated Given the modular nature of the phonological system and its direct linkage with peripheral components of the nervous system research on phonology and the brain will undoubtedly flourish in the future The chapters in this volume give substance to this future

Brain Mechanisms L. Andrew Coward, 2021-09-14 Brain Mechanisms Linking Cognitive Phenomena to Neuron Activity shows how to understand higher cognition in terms of brain anatomy physiology and chemistry Natural selection pressures have resulted in all information processes in the brain being one of just two general types condition definition detections and behavioural recommendation definition integrations Using these information process types hierarchies of description can be created that map from cognitive phenomena to the activity of the billions of neurons in the brain These hierarchies make it possible to create an intuitively satisfying understanding of how neuron activity results in human memory consciousness and self awareness These ideas were previously described at a technical level in *Towards a Theoretical Neuroscience from Cell Chemistry to Cognition* This book presents the ideas for a more general readership *Brain Mechanisms Underlying Speech*
