Theory of Linear Differential Operators and Comparison Algebras Heinz Otto Cordes, 1987-04-23 The main aim of this book is to introduce the reader to the concept of comparison algebra defined as a type of C^* -algebra of singular integral operators. The first part of the book develops the necessary elements of the spectral theory of differential operators as well as the basic properties of elliptic second order differential operators. The author then introduces comparison algebras and describes their theory in L^2 spaces and L^2 Sobolev spaces and in particular their importance in solving functional analytic problems involving differential operators. The book is based on lectures given in Sweden and the USA. *Cohomology Theory of Topological Transformation Groups* W.Y. Hsiang, 2012-12-06

Historically applications of algebraic topology to the study of topological transformation groups were originated in the work of L. E. J. Brouwer on periodic transformations and a little later in the beautiful fixed point theorem of P. A. Smith for prime periodic maps on homology spheres. Upon comparing the fixed point theorem of Smith with its predecessors the fixed point theorems of Brouwer and Lefschetz one finds that it is possible at least for the case of homology spheres to upgrade the conclusion of mere existence or non existence to the actual determination of the homology type of the fixed point set if the map is assumed to be prime periodic. The pioneer result of P. A. Smith clearly suggests a fruitful general direction of studying topological transformation groups in the framework of algebraic topology. Naturally the immediate problems following the Smith fixed point theorem are to generalize it both in the direction of replacing the homology spheres by spaces of more general topological types and in the direction of replacing the group π_1 by more general compact groups. *Linear Operators* Richard G. Cooke, 1953 **Spectral Theory of Linear Operators** Henry R. Dowson, 1978 General spectral theory Riesz operators Hermitian operators Prespectral operators Well bounded operators *Glasnik matematičko-fizički i astronomski*, 1958 **Glasnik matematičko-fizički i astronomski** Hrvatsko prirodoslovno društvo, 1958 Linear Operators: Spectral theory Nelson Dunford, 1988 Theory of Linear Operators in Hilbert Space N. I. Akhiezer, I. M. Glazman, 2013-04-15 This classic textbook by two mathematicians from the USSR's prestigious Kharkov Mathematics Institute introduces linear operators in Hilbert space and presents in detail the geometry of Hilbert space and the spectral theory of unitary and self adjoint operators. It is directed to students at graduate and advanced undergraduate levels but because of the exceptional clarity of its theoretical presentation and the inclusion of

results obtained by Soviet mathematicians it should prove invaluable for every mathematician and physicist 1961 1963
