The Nature of Physical Reality Subhash Kak, 1986 This book is a study of the paradoxes that underlie our understanding of the physical world It is shown that many of these paradoxes are actually variants of classical paradoxes known to the ancient Indians and Greeks The book presents a historical perspective on the development of key scientific ideas and discusses the significance of our understanding the nature of consciousness in further advance The book also examines several philosophical issues at the basis of modern physics

The Nature of Physical Reality Henry Margenau, 1950 **Dictionary Of Modern American Philosophers** John R. Shook, 2005-05-15 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

Einstein, Tagore and the Nature of Reality Partha Ghose, 2016-06-23 The nature of reality has been a long debated issue among scientists and philosophers In 1930 Rabindranath Tagore and Albert Einstein had a long conversation on the nature of reality This conversation has been widely quoted and discussed by scientists philosophers and scholars from the literary world The important question that Tagore and Einstein discussed was whether the world is a unity dependent on humanity or the world is a reality independent on the human factor Einstein took the stand adopted by Western philosophers and mathematicians namely that reality is something independent of the mind and the human factor Tagore on the other hand adopted the opposite view Nevertheless both Einstein and Tagore claimed to be realists despite the fundamental differences between their conceptions of reality Where does the difference lie Can it be harmonized at some deeper level Can Wittgenstein for example be a bridge between the two views This collection of essays explores these two fundamentally different conceptions

of the nature of reality from the perspectives of theories of space time quantum theory general philosophy of science cognitive science and mathematics *The Dictionary of Modern American Philosophers: K-Q* John R. Shook, Richard T. Hull, 2005 This biographical dictionary contains around 900 entries on philosophers and other intellectuals who impacted philosophical thought in America from 1860 to the present i e 2005 **NATURE OF PHYSICAL REALITY** H. MARGENAU, 2013 *Appearance and Reality* Peter Kosso, 1998 Appearance and Reality An Introduction to the Philosophy of Physics addresses quantum mechanics and relativity and their philosophical implications focusing on whether these theories of modern physics can help us know nature as it really is or only as it appears to us The author clearly explains the foundational concepts and principles of both quantum mechanics and relativity and then uses them to argue that we can know more than mere appearances and that we can know to some extent the way things really are He argues that modern physics gives us reason to believe that we can know some things about the objective real world but he also acknowledges that we cannot know everything which results in a position he calls realistic realism This book is not a survey of possible philosophical interpretations of modern physics nor does it leap from a caricature of the physics to some wildly alarming metaphysics Instead it is careful with the physics and true to the evidence in arriving at its own realistic conclusions It presents the physics without mathematics and makes extensive use of diagrams and analogies to explain important ideas Engaging and accessible Appearance and Reality serves as an ideal introduction for anyone interested in the intersection of philosophy and physics including students in philosophy of physics and philosophy of science courses The Physical and Philosophical Nature of the Foundation of Modern Physics Ta-you Wu, 1975 **The Journal of Philosophy** , 1926 Covers topics in philosophy psychology and scientific methods Vols 31 include A Bibliography of philosophy 1933 **University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Subjects** University of California (System). Institute of Library Research, University of California, Berkeley, 1972 **21st Century Natural Philosophy of Ultimate Physical Reality** Stephen Blaha, 2011-01 This book develops a 21st century Metaphysics and Natural Philosophy based on the Physics of Quantum Theory and Special and General Relativity It suggests that modern Physics reduces Metaphysics to a much simpler form than the Metaphysical speculations of recent centuries It returns to the original monistic ideas of Thales and his successors and shows that Nature at the sub quantum level leads directly to the view that the universe is composed of one substance that can assume a variety of forms that we call elementary particles and can also have a lack of form by being an infinite superposition of all forms that we call the vacuum The Natural Philosophy presented in this volume is based on the general nature of quantum field theory and particularly on modern Elementary Particle theory Among items of interest is a precise modern view of Causation and Change a proof that all physical Reality is contingent the introduction of a new Modality based on the concept of contingently necessary an explanation of the nature of time and space a demonstration that The Standard Model of Elementary Particles is ultimately based on Logic as well as

many other points differentiating 21st century Metaphysics from classical Metaphysics In the interests of reaching a wide audience there is no mathematics in this work Those wishing to see mathematical detail are directed to earlier work by this author
