Source In Chemistry 1900 1950:

Source Book in Chemistry 1900-1950 Henry M. Leicester, 1968 A Source Book in Chemistry, 1900-1950 Henry M. Leicester, 2013-10-01 The growing interdependence of the sciences was one of the outstanding characteristics of the first half of the twentieth century Inevitably Dr Leicester points out this expanded vision led to closer contacts among chemists of every speciality and also with scientists in other fields Physics and physical chemistry were applied to organic compounds and new substances that could not have been foreseen by the older theories were prepared Reaction mechanisms were generalized New borderline sciences sprang up Chemical physics and biochemistry became sciences in their own right Chemistry thus became a link between physics and biology A continuation of A Source Book in Chemistry 1400 1900 HUP 1952 this volume contains selections from ninety classic papers in all branches of chemistry papers upon which contemporary research and practices are based The topics include such chemical techniques as microanalysis polarography hydrogen ion concentration chromatography electrophoresis and the use of the ultramicroscope the ultracentrifuge and radioactive tracers modern structural theories with emphasis on crystal structure radioactive decay isotopes molecular structure the applications of quantum mechanics to chemistry thermodynamics electrolytes and kinetics the more recent studies on artificial radioactivity and the transuranium elements organic chemistry with reference to general synthetic methods polymers the structure of proteins nucleic acids alkaloids steroids and carotenoids and biochemistry including the concept of hormones and vitamins separation of enzymes and viruses metabolism of fats proteins and carbohydrates and energy production The Source Book serves as an introduction to present day chemistry and can also be used as supplementary reading in general chemistry courses since in many instances the papers explain the circumstances under which a particular discovery was made information that is customarily lacking in textbooks Although the selections are classified into the usual branches of the science it will be apparent to the reader how the discoveries in any one branch were taken up and incorporated into others Women in Chemistry Marelene F. Rayner-Canham, Geoffrey Rayner-Canham, 1998 Though rarely noted women have been active participants in the chemical sciences since the beginning of recorded history This thought provoking book brings to life the many talented women who besides the universally respected Marie Curie made significant contributions to chemistry The Rayner Canhams examine the forces that have defined women's roles in the progress of chemistry observing that many were thwarted from capitalizing on their achievements by the prejudices of their time Their book discusses women chemists from as far past as the Babylonian civilization but focuses on professional women chemists from the mid 19th century when women gained access to higher education Read this book and learn about the chemist assistants of the French salons about independent researchers in the 19th century about the three disciplinary havens for women in the 20th century about how war helped bring women into the chemical industry and much more

From Atoms to Molecules Colin A. Russell, 2024-08-01 The focus of this volume by Professor Russell is the history of

organic chemistry which arose improbably out of early speculations about the construction of chemical compounds and in particular their electrochemical nature The rise of electrochemistry and the work of Berzelius were critical in this regard and receive much attention in the first few chapters in this book Aspects of the contributions of Frankland fully explored elsewhere and those of Kekul and Hofmann are considered together with the miscellaneous functions of organic synthesis and the origins of conformational analysis Questions of chemical organisation are germane to the whole sequence of events and are briefly summarized before the whole last hundred years of organic chemistry are placed in historical perspective

Library Journal Melvil Dewey, Richard Rogers Bowker, L. Pylodet, Charles Ammi Cutter, Bertine Emma Weston, Karl Brown, Helen E. Wessells, 1900 Includes beginning Sept 15 1954 and on the 15th of each month Sept May a special section School library journal ISSN 0000 0035 called Junior libraries 1954 May 1961 Also issued separately Scientific American, 1880 Monthly magazine devoted to topics of general scientific interest **National Science Board**, 1982
