Strategic Planning In Environmental Regulation A Policy Approach That Works:

Strategic Planning in Environmental Regulation Steven Cohen, Sheldon Kamieniecki, Matthew Alan Cahn, 2005

Demonstrates how to increase the effectiveness of environmental regulation by adopting a strategic approach to regulatory planning providing a theoretical model and two case studies Strategic Planning in Environmental Regulation introduces an approach to environmental regulatory planning founded on a creative interactive relationship between business and government The authors argue that regulation often too narrowly defined as direct command and control standard setting and enforcement should include the full range of activities intended to influence private behaviour to conform to public goals The concept of strategic regulatory planning that the book introduces provides a model for designing more effective environmental regulation Strategic planning requires careful consideration of the regulatory objectives the target audiences for regulation and the characteristics of the regulatory agency The two important case studies in the book one on the use of the gasoline additive MTBE and the other on the cleanup of underground storage tanks USTs apply the model compare the approaches and results and illustrate the advantages of a strategic approach gasoline was found to contribute to both air and groundwater pollution shows the drawbacks of top down regulation by fragmented regulatory agencies The success of the UST cleanup in contrast highlights a unique strategic and results oriented approach to policy implementation These two cases demonstrate why regulation works better in some cases than others and the alternative approaches to regulation described in the book promise to promote the achievement of environmental quality goals **American Environmental**

Policy, updated and expanded edition Christopher Mcgrory Klyza, David J. Sousa, 2013-08-30 An updated investigation of alternate pathways for American environmental policymaking made necessary by legislative gridlock The golden era of American environmental lawmaking in the 1960s and 1970s saw twenty two pieces of major environmental legislation including the Clean Air Act the Clean Water Act and the Endangered Species Act passed by bipartisan majorities in Congress and signed into law by presidents of both parties But since then partisanship the dramatic movement of Republicans to the right and political brinksmanship have led to legislative gridlock on environmental issues In this book Christopher Klyza and David Sousa argue that the longstanding legislative stalemate at the national level has forced environmental policymaking onto other pathways Klyza and Sousa identify and analyze five alternative policy paths which they illustrate with case studies from 1990 to the present appropriations politics in Congress executive authority the role of the courts next generation collaborative experiments and policymaking at the state and local levels This updated edition features a new chapter discussing environmental policy developments from 2006 to 2012 including intensifying partisanship on the environment the failure of Congress to pass climate legislation the ramifications of Massachusetts v EPA and other Obama administration executive actions some of which have reversed Bush administration executive actions Yet they argue despite legislative gridlock the legacy of 1960s and 1970s policies has created an enduring green state rooted in statutes bureaucratic routines

Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities updated with the latest research and additional case studies Today most major cities have undertaken some form of sustainability initiative Yet there have been few systematic comparisons across cities or theoretically grounded considerations of what works and what does not and why In *Taking Sustainable Cities Seriously* Kent Portney addresses this gap offering a comprehensive overview and analysis of sustainability programs and policies in American cities After discussing the conceptual underpinnings of sustainability he examines the local aspects of sustainability considers the measurement of sustainability and offers an index of serious sustainability for the fifty five largest cities in the country examines the relationship between sustainability and economic growth and discusses issues of governance equity and implementation He also offers extensive case studies with separate chapters on large medium size and small cities and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts This second edition has been updated throughout with new material that draws on the latest research It also offers numerous additional case

studies a new chapter on management and implementation issues and a greatly expanded comparative analysis of big city sustainability initiatives Portney shows how cities use the broad rubric of sustainability to achieve particular political ends and he dispels the notion that only cities that are politically liberal are interested in sustainability Taking Sustainable Cities Seriously draws a roadmap for effective sustainability initiatives American Environmental Policy Daniel Press,2015-02-27 More than 40 years after the United States launched bold efforts to curb pollution and waste American environmental management has stalled Drawing extensively on recent environmental science engineering regulatory agency data and trade information **Changing Climates in North American Politics** Henrik Selin, Stacy D. VanDeveer,2009 In this age of high fuel prices and concern with continuing availability of oil scientists are working on a number of approaches to alternate fuel sources These concerns may provoke interest in how some people in gas starved Europe dealt with such problems throughout the war years 1939 1945 One of the most successful innovations were the so called gas producer vehicles that utilized the by products of solid fuel combustion employing such solids as coal charcoal turf and wood to produce fuel gas for a standard internal combustion engine This book provides an overview of such vehicles including those used by the Wehrmacht Schematics of operating systems and the regulations concerning their use are also included along with a translated German illustrated operators manual Publisher *Effective Advocacy* Mary Alice Haddad,2021-03-23 An examination of successful environmental advocacy strategies in East Asia that shows how advocacy can be effective under difficult conditions The countries of East Asia China Japan South Korea and Taiwan are home to some of the most active and effective environmental advocates in the world And the governments of these countries have adopted a range of innovative policies to fight pollution and climate change Japan leads the world in emissions standards China has become the world's largest producer of photovoltaic panels and Taiwan and Korea have undertaken major green initiatives In this book Mary Alice Haddad examines the advocacy strategies that persuaded citizens governments and businesses of these countries to change their behavior **Governing the Tap** Megan Mullin,2009-08-21 An analysis of the political consequences of special district governance in drinking water management that offers new insights into the influence of political structures on local policymaking More than ever Americans rely on independent special districts to provide public services The special district which can be as small as a low budget mosquito abatement district or as vast as the Port Authority of New York and New Jersey has become the most common form of local governance in the United States In *Governing the Tap* Megan Mullin examines the consequences of specialization and the fragmentation of policymaking authority through the lens of local drinking water policy Directly comparing specific conservation land use and contracting policies enacted by different forms of local government Mullin investigates the capacity of special districts to engage in responsive and collaborative decision making that promotes sustainable use of water resources She concludes that the effect of specialization is conditional on the structure of institutions and the severity of the policy problem with specialization offering the most benefit on policy

problems that are least severe Mullin presents a political theory of specialized governance that is relevant to any of the variety of functions special districts perform Governing the Tap offers not only the first study of how the new decentralized politics of water is taking shape in American communities but also new and important findings about the influence of institutional structures on local policymaking

The Power of Narrative in Environmental Networks Raul Lejano, Mrill Ingram, Helen Ingram, 2013-07-26 Theory and case studies demonstrate the analytic potential of mutually constitutive narrative networks in environmental governance For as long as humans have lived in communities storytelling has bound people to each other and to their environments In recent times scholars have noted how social networks arise around issues of resource and ecological management In this book Raul Lejano Mrill Ingram and Helen Ingram argue that stories or narratives play a key role in these networks that environmental communities narrate themselves into existence The authors propose the notion of the narrative network and introduce innovative tools to analyze the plots characters and events that inform environmental action Their analysis sheds light on how environmental networks can emerge in unlikely contexts and sustain themselves against great odds The authors present three case studies that demonstrate the power of narrative and narratology in the analysis of environmental networks a conservation network in the Sonoran Desert which achieved some success despite U S Mexico border issues a narrative that bridged differences between community and scientists in the Turtle Islands and networks of researchers and farmers who collaborated to develop and sustain alternative agriculture practice in the face of government inaction These cases demonstrate that by paying attention to language and storytelling we can improve our understanding of environmental behavior and even change it in positive ways

State and Environment Andreas Duit, 2014-06-06 Studies of environmental governance that show the relevance of the state's role in environmental politics and the analytical power of the comparative approach Many recent studies on environmental governance focus on either the micro level the local and the individual or the macro level the global while neglecting governance at the nation state level State environmental governance is often perceived as inadequate insufficient or constrained by considerations of economic growth And yet the impact of state environmental governance dwarfs that of the market or international organizations This book of comparative studies documents the continuing relevance of the state in environmental politics and policy The book also demonstrates the analytical power of the comparative approach to the study of environmental politics and policy offering cross national comparisons of environmental governance in both developed and developing countries Some chapters are based on qualitative studies from a small number of countries others offer statistical analyses of quantitative data from many more countries over a longer time period Topics discussed include alternative approaches to estimating comparative environmental performance citizens shifting perceptions of their environmental responsibilities U S and German wind policies fisheries management in several African countries and forestry conservation in Bolivia Guatemala and Peru The studies illuminate such key issues as the effect of different political systems on the evolution of environmental

policy regimes why some countries seem to perform better than others in environmental matters and the sociopolitical context of resource management **Comparative Environmental Politics** Paul F. Steinberg, Stacy D.

Vandever, 2012-02-17 Combining the theoretical tools of comparative politics with the substantive concerns of environmental policy experts explore responses to environmental problems across nations and political systems How do different societies respond politically to environmental problems around the globe Answering this question requires systematic cross national comparisons of political institutions regulatory styles and state society relations The field of comparative environmental politics approaches this task by bringing the theoretical tools of comparative politics to bear on the substantive concerns of environmental policy This book outlines a comparative environmental politics framework and applies it to concrete real world problems of politics and environmental management After a comprehensive review of the literature exploring domestic environmental politics around the world the book provides a sample of major currents within the field showing how environmental politics intersects with such topics as the greening of the state the rise of social movements and green parties European Union expansion corporate social responsibility federalism political instability management of local commons and policymaking under democratic and authoritarian regimes It offers fresh insights into environmental problems ranging from climate change to water scarcity and the disappearance of tropical forests and it examines actions by state and nonstate actors at levels from the local to the continental The book will help scholars and policymakers make sense of how environmental issues and politics are connected around the globe and is ideal for use in upper level undergraduate and graduate courses **Networking the Bloc** Klara Kemp-Welch, 2019-02-12 The story of the experimental zeitgeist in Eastern European art seen through personal encounters pioneering dialogues collaborative projects and cultural exchanges Throughout the 1970s a network of artists emerged to bridge the East West divide and the no less rigid divides between the countries of the Eastern bloc Originating with a series of creative initiatives by artists art historians and critics and centered in places like Budapest Pozna and Prague this experimental dialogue involved Western participation but is today largely forgotten in the West In Networking the Bloc Klara Kemp Welch vividly recaptures this lost chapter of art history documenting an elaborate web of artistic connectivity that came about through a series of personal encounters pioneering dialogues collaborative projects and cultural exchanges Countering the conventional Cold War narrative of Eastern bloc isolation Kemp Welch shows how artistic ideas were relayed among like minded artists across ideological boundaries and national frontiers Much of the work created was collaborative and personal encounters were at its heart Drawing on archival documents and interviews with participants Kemp Welch focuses on the exchanges and projects themselves rather than the personalities involved Each of the projects she examines relied for its realization on a network of contributors She looks first at the mobilization of the network from 1964 to 1972 exploring five pioneering cases a friendship between a Slovak artist and a French critic an artistic credo an exhibition a conceptual proposition and a book She then

charts a series of way stations for experimental art from the Soviet bloc between 1972 and 1976 points of distribution between studios private homes galleries and certain cities Finally she investigates convergences a succession of shared exhibitions and events in the second half of the 1970s in locations ranging from Prague to Milan to Moscow Networking the Bloc Kemp Welch invites us to rethink the art of the late Cold War period from Eastern European perspectives *The Resistance Dilemma* George Hoberg,2021-08-17 How organized resistance to new fossil fuel infrastructure became a political force and how this might affect the transition to renewable energy Organized resistance to new fossil fuel infrastructure particularly conflicts over pipelines has become a formidable political force in North America In this book George Hoberg examines whether such place based environmental movements are effective ways of promoting climate action if they might inadvertently feed resistance to the development of renewable energy infrastructure and what other more innovative processes of decision making would encourage the acceptance of clean energy systems Focusing on a series of conflicts over new oil sands pipelines Hoberg investigates activists strategy of blocking fossil fuel infrastructure often in alliance with Indigenous groups and examines the political and environmental outcomes of these actions After discussing the oil sands policy regime and the relevant political institutions in Canada and the United States Hoberg analyzes in detail four anti pipeline campaigns examining the controversies over the Keystone XL the most well known of these movements and the first one to use infrastructure resistance as a core strategy the Northern Gateway pipeline the Trans Mountain pipeline and the Energy East pipeline He then considers the resistance dilemma the potential of place based activism to threaten the much needed transition to renewable energy He examines several episodes of resistance to clean energy infrastructure in eastern Canada and the United States Finally Hoberg describes some innovative processes of energy decision making including strategic environment assessment and cumulative impact assessment looking at cases in British Columbia and Lower Alberta

Can We Price Carbon? Barry G. Rabe,2018-04-06 A political science analysis of the feasibility and sustainability of carbon pricing drawing from North American European and Asian case studies Climate change economists generally agree is best addressed by putting a price on the carbon content of fossil fuels by taxing carbon by cap and trade systems or other methods But what about the politics of carbon pricing Do political realities render carbon pricing impracticable In this book Barry Rabe offers the first major political science analysis of the feasibility and sustainability of carbon pricing drawing upon a series of real world attempts to price carbon over the last two decades in North America Europe and Asia Rabe asks whether these policies have proven politically viable and if adopted whether they survive political shifts and managerial challenges over time The entire policy life cycle is examined from adoption through advanced implementation on a range of pricing policies including not only carbon taxes and cap and trade but also such alternative methods as taxing fossil fuel extraction These case studies Rabe argues show that despite the considerable political difficulties carbon pricing can be both feasible and durable *Natural Experiments* Judith A. Layzer,2008 EBM entails collaborative landscape scale planning and

flexible adaptive implementation **Environmental Regulation Through Strategic Planning** Steven Cohen, Sheldon Kamieniecki, 1991-10-17 Presents a workable approach for implementing hazardous materials regulation Focusing on the development of comprehensive tactical plans the authors both veteran researchers of the EPA's regulatory procedures offer a blueprint for future environmental management programmes *Climate Change* Joseph F. DiMento, Pamela Doughman, 2007 Explains how the earth's climate system works and how global climate change can impact individual nations Also explains the science of why these changes are occurring including discussion of greenhouse gases and aerosols and their effect on melting glaciers Carbon Captured Matto Mildenberger, 2020-02-18 A comparative examination of domestic climate politics that offers a theory for cross national differences in domestic climate policymaking Climate change threatens the planet and yet policy responses have varied widely across nations Some countries have undertaken ambitious programs to stave off climate disaster others have done little and still others have passed policies that were later rolled back In this book Matto Mildenberger opens the black box of domestic climate politics examining policy making trajectories in several countries and offering a theoretical explanation for national differences in the climate policy process Mildenberger introduces the concept of double representation when carbon polluters enjoy political representation on both the left through industrial unions fearful of job loss and the right through industrial business associations fighting policy costs and argues that different climate policy approaches can be explained by the interaction of climate policy preferences and domestic institutions He illustrates his theory with detailed histories of climate politics in Norway the United States and Australia along with briefer discussions of policies in Germany Japan the United Kingdom and Canada He shows that Norway systematically shielded politically connected industrial polluters from costs beginning with its pioneering carbon tax the United States after the failure of carbon reduction legislation finally acted on climate reform through a series of Obama administration executive actions and Australia's Labor and Green parties enacted an emissions trading scheme which was subsequently repealed by a conservative Liberal party government Ultimately Mildenberger argues for the importance of political considerations in understanding the climate policymaking process and discusses possible future policy directions

Failed Promises David M. Konisky, 2015-03-27 A systematic evaluation of the implementation of the federal government's environmental justice policies In the 1970s and 1980s the U.S. Congress passed a series of laws that were milestones in environmental protection including the Clean Air Act and the Clean Water Act But by the 1990s it was clear that environmental benefits were not evenly distributed and that poor and minority communities bore disproportionate environmental burdens The Clinton administration put these concerns on the environmental policy agenda most notably with a 1994 executive order that called on federal agencies to consider environmental justice issues whenever appropriate This volume offers the first systematic empirically based evaluation of the effectiveness of the federal government's environmental justice policies The contributors consider three overlapping aspects of environmental justice distributive justice or the

equitable distribution of environmental burdens and benefits procedural justice or the fairness of the decision making process itself and corrective justice or the fairness of punishment and compensation Focusing on the central role of the Environmental Protection Agency they discuss such topics as facility permitting rulemaking participatory processes bias in enforcement and the role of the courts in redressing environmental injustices Taken together the contributions suggest that despite recent environmental justice initiatives from the Obama administration the federal government has largely failed to deliver on its promises of environmental justice Contributors Dorothy M Daley Eileen Gauna Elizabeth Gross David M Konisky Douglas S Noonan Tony G Reames Christopher Reenock Ronald J Shadbegian Paul Stretesky Ann Wolverton
