**Innovative Strategies and New Insights for the Treatment of Stage III Non-Small Cell Lung Cancer** Aakash Desai, Andrea R. Filippi ,Jessica Desiree Menis,Francesco Cortiula,2024-11-19 Stage III NSCLC comprises a heterogeneous group of patients It includes both resectable disease for which the standard of care is surgery plus neo adjuvant chemotherapy immunotherapy and unresectable disease for which the standard of care is concurrent chemoradiotherapy CCRT followed by one year of adjuvant durvalumab Survival in stage III NSCLC is still poor despite all the progress made in recent years with the advent of immunotherapy Many questions and unmet clinical needs are still to be addressed in both resectable and unresectable disease in order to further improve patients survival and limit toxicities It is unlikely that a one fits all model or simply adding new drugs represent the best solutions Predictive biomarkers are strongly needed and identifying the patients who benefit the most from a specific treatment would be key Adaptive strategies to spare unnecessary treatment e g adjuvant therapy for patients cured with surgery alone or to timely escalate therapy might also be important With this Research Topic we aim to shed some light on the best treatment for patients with stage III NSCLC

 Oncology has expanded its activities in postgraduate teaching which consisted mainly of traditional disease orientated  
 courses by promoting new educational initiatives One of these is the cloister seminars short meetings intended for highly  
 qualified oncologists and dealing with specific controversial aspects of clinical practice and research Another is the  
 institution of permanent study groups also called task forces where a limited number of leading experts are invited to meet  
 once a year with the aim of defining the state of the art and possibly reaching a consensus on developments and treatment in  
 specific fields of oncology This series of ESO Monographs was designed with the specific purpose of disseminating the results  
 of the most interesting of the seminars and study groups and providing concise and updated reviews of the subjects  
 discussed It was decided to keep the layout very simple in order to keep costs to a minimum and make the monographs

 thyroid gland leading to inflammation and damage to the gland This can result in a range of thyroid pathologies including  
 hypothyroidism and hyperthyroidism The prevalence of thyroid autoimmunity is increasing worldwide and it is more common  
 in women than in men Recent advances in research on thyroid autoimmunity and pathology have improved our

understanding of the mechanisms underlying the development of autoimmune thyroid disease and have identified new targets for therapeutic interventions These advances have also led to improvements in treatment strategies for patients with thyroid autoimmunity This Research Topic welcomes contributions of any type clinical trial correction editorial general commentary hypothesis theory methods mini review opinion original research perspective policy and practice reviews review study protocol systematic review technology and code on topics around recent studies on new treatment strategies for patients with thyroid autoimmunity thyroid orbitopathy and selected thyroid cancer

**New immunotherapy strategies and related therapeutic targets for gastrointestinal malignancies** Chi Chun Wong,Yantao Tian,Chenyu Sun,Qun Zhao,Ganesan Ramamoorthi,Ping'An Ding,2024-03-13 Currently the treatment options for gastrointestinal malignancies mainly include surgery chemotherapy radiotherapy and molecular targeted therapy etc Drug therapy is one of the main treatments for patients with advanced stages but the efficacy of chemotherapy seems to have reached a plateau and the progress of traditional molecular targeted therapy is relatively slow In addition the benefits of the current chemotherapy combined with targeted therapy for patients with advanced stages of gastrointestinal malignancies are still not satisfactory Tumor immunotherapy is an emerging therapeutic approach and is a current research hotspot and there are hopes that immunotherapy can help further improve the prognosis and quality of life for patients with gastrointestinal malignancies At the same time potential targets of immunotherapeutic drugs and prognostic biomarkers for gastrointestinal malignancies have been less studied than other common cancers such as lung cancer Prognostic biomarker studies are the beginning of exploring new drug targets and revealing potential mechanisms of tumor progression Immunotherapies particularly PD1 or PD L1 antagonists have demonstrated effective therapeutic efficacy against various types of cancer To date many PD1 drugs are available for cancer treatment and more than 100 PD1 drugs are in clinical trials However the question of how to screen sensitive patients and predict the efficacy of immunotherapy remains unresolved In addition predictive biomarkers and treatment guidelines for immunotherapy of gastrointestinal malignancies have hardly been studied
