Strategies to Protect the Health of Deployed U.S. Forces National Research Council, Division on Engineering and Physical Sciences, Department of Military Science and Technology, Commission on Engineering and Technical Systems, 2000-01-11 Since Operation Desert Shield Desert Storm Gulf War veterans have expressed concerns that their postdeployment medical symptoms could have been caused by hazardous exposures or other deployment related factors Potential exposure to a broad range of CB and other harmful agents was not unique to Gulf operations Hazardous exposures have been a component of all military operations in this century Nevertheless the Gulf War deployment focused national attention on the potential but uncertain relationship between the presence of CB agents in theater and symptoms reported by military personnel Particular attention has been given to the potential long term health effects of low level exposures to CB agents In the spring of 1996 Deputy Secretary of Defense John White met with the leadership of the National Academies to discuss the DoD s continuing efforts to improve protection of military personnel from adverse health effects during deployments in hostile environments Although many lessons learned from previous assessments of Operation Desert Shield Desert Storm have been reported prospective analyses are still needed Strategies to

Protect the Health of Deployed U S Forces Force Protection and Decontamination which addresses the issues of physical protection and decontamination is one of four initial reports that will be submitted in response to that request Specifically this report includes a review and evaluation of the following areas the adequacy of current protective equipment and protective measures as well as equipment in development the efficacy of current and proposed methods for decontaminating personnel and equipment after exposures to CB agents current policies doctrine and training to protect and decontaminate personnel and equipment in future deployments i e major regional conflicts MRCs lesser regional conflicts LRCs and operations other than war OOTWs the impact of equipment and procedures on unit effectiveness and other human performance factors current and projected military capabilities to provide emergency response Protecting Those Who Serve Institute of Medicine,Committee on Strategies to Protect the Health of Deployed U.S. Forces,2000-10-04 Since the Gulf War ended in 1991 various constituencies including a significant number of veterans speculate that unidentified risk factors led to chronic medically unexplained illnesses and these constituencies challenge the depth of the military s commitment to protect the health of deployed troops Despite general concurrence in findings to support these claims few changes have been made at the field level The most important recommendations remain unimplemented despite the compelling rationale for urgent action Protecting Those Who Serve illuminates these recommendations and government developed plans that remain inactive due to a lack of authority within the Department of Defense while describing the dangers that may result from failure to protect our forces in the field **Strategies to Protect the Health of Deployed U.S. Forces** Institute of Medicine,Medical Follow-Up Agency,1999-02-01 Nine years after Operations Desert Shield and Desert Storm the Gulf War ended in June 1991 uncertainty and questions remain about illnesses reported in a substantial percentage of the 697 000 service members who were deployed Even though it was a short conflict with very few battle casualties or immediately recognized disease or non battle injuries the events of the Gulf War and the experiences of the ensuing years have made clear many potentially instructive aspects of the deployment and its hazards Since the Gulf War several other large deployments have also occurred including deployments to Haiti and Somalia Major deployments to Bosnia Southwest Asia and most recently Kosovo are ongoing as this report is written This report draws on lessons learned from some of these deployments to consider strategies to protect the health of troops in future deployments In the spring of 1996 Deputy Secretary of Defense John White met with leadership of the National Research Council and the Institute of Medicine to explore the prospect of an independent proactive effort to learn from lessons of the Gulf War and to develop a strategy to better protect the health of troops in future deployments **Strategies to Protect the Health of Deployed U.S. Forces** National Research Council,Commission on Life Sciences,Board on Environmental Studies and Toxicology,2000-03-17 Risk management is especially important for military forces deployed in hostile and or chemically contaminated environments and on line or rapid turn around capabilities for assessing exposures can create viable options for preventing or minimizing

Deployment of forces in hostile or unfamiliar environments is inherently risky The changing missions and increasing use of U S forces around the globe in operations other than battle call for greater attention to threats of non battle related health problems including infections pathogen and vector borne diseases exposure to toxicants and psychological and physical stress all of which must be avoided or treated differently from battle casualties The likelihood of exposure to chemical and biological weapons adds to the array of tactical threats against which protection is required The health consequences of physical and psychological stress by themselves or through interaction with other threats are also increasingly recognized In addition the military's responsibility in examining potential health and safety risks to its troops is increasing and the spectrum of health concerns is broadening from acute illness and injury due to pathogens and accidents to possible influences of low level chemical exposures which can manifest themselves in reproductive health and chronic illnesses years later perhaps even after cessation of military service Strategies to Protect the Health of Deployed U S Forces develops an analytical framework for assessing risks which would encompass the risks of adverse health effects from battle injuries including those from chemical and biological warfare agents and non battle related health problems The presumed spectrum of deployment ranged from peacekeeping to full scale conflict

Assessing Health Risks to Deployed U.S. Forces, 2000 Risk management is especially important for military forces deployed in hostile and or chemically contaminated environments and on line or rapid turn around capabilities for assessing exposures can create viable options for preventing or minimizing incapacitating exposures or latent disease or disability in the years after the deployment With military support for the development testing and validation of state of the art personal and area sensors telecommunications and data management resources the DOD can 1 enhance its capabilities for meeting its novel and challenging tasks and 2 create technologies that will find widespread civilian uses This review assesses currently available options and technologies for productive pre deployment environmental surveillance exposure surveillance during deployments and retrospective exposure surveillance post deployment and introduces some opportunities for technological

and operational advancements in technology for more effective exposure surveillance and effects management options for force deployments in future years

Strategies to Protect the Health of Deployed U.S. Forces National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Lorenz Rhomberg, 2000-03-01

Deployment of forces in hostile or unfamiliar environments is inherently risky. The changing missions and increasing use of U.S. forces around the globe in operations other than battle call for greater attention to threats of non battle related health problems including infections, pathogen and vector borne diseases, exposure to toxicants and psychological and physical stress, all of which must be avoided or treated differently from battle casualties. The likelihood of exposure to chemical and biological weapons adds to the array of tactical threats against which protection is required. The health consequences of physical and psychological stress by themselves or through interaction with other threats are also increasingly recognized. In addition, the military's responsibility in examining potential health and safety risks to its troops is increasing and the spectrum of health concerns is broadening from acute illness and injury due to pathogens and accidents to possible influences of low level chemical exposures which can manifest themselves in reproductive health and chronic illnesses years later, perhaps even after cessation of military service.

Strategies to Protect the Health of Deployed U.S. Forces develops an analytical framework for assessing risks which would encompass the risks of adverse health effects from battle injuries including those from chemical and biological warfare agents and non battle related health problems. The presumed spectrum of deployment ranged from peacekeeping to full scale conflict.

Strategies to Protect the Health of Deployed U.S. Forces Medical Follow-Up Agency, Institute of Medicine, 1999-01-15

Nine years after Operations Desert Shield and Desert Storm, the Gulf War ended in June 1991. Uncertainty and questions remain about illnesses reported in a substantial percentage of the 697,000 service members who were deployed. Even though it was a short conflict with very few battle casualties or immediately recognized disease or non battle injuries, the events of the Gulf War and the experiences of the ensuing years have made clear many potentially instructive aspects of the deployment and its hazards. Since the Gulf War, several other large deployments have also occurred including deployments to Haiti and Somalia. Major deployments to Bosnia, Southwest Asia, and most recently Kosovo are ongoing as this report is written. This report draws on lessons learned from some of these deployments to consider strategies to protect the health of troops in future deployments.

In the spring of 1996, Deputy Secretary of Defense John White met with leadership of the National Research Council and the Institute of Medicine to explore the prospect of an independent proactive effort to learn from lessons of the Gulf War and to develop a strategy to better protect the health of troops in future deployments.

Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-09-03

To guide mission planning, military decision makers need information on the health risks of

potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk assessment practices The report finds that the military exposure guidelines are appropriate with some modification for providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment

Gulf War and Health National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Gulf War and Health, Volume 11: Generational Health Effects of Serving in the Gulf War, 2018-12-20 For the United States the 1991 Persian Gulf War was a brief and successful military operation with few injuries and deaths However soon after returning from duty a large number of veterans began reporting health problems they believed were associated with their service in the Gulf At the request of Congress the National Academies of Sciences Engineering and Medicine has been conducting an ongoing review of the evidence to determine veterans long term health problems and potential causes Some of the health effects identified by past reports include post traumatic stress disorders other mental health disorders Gulf War illness respiratory effects and self reported sexual dysfunction Veterans concerns regarding the impacts of deployment related exposures on their health have grown to include potential adverse effects on the health of their children and grandchildren These concerns now increasingly involve female veterans as more women join the military and are deployed to war zones and areas that pose potential hazards Gulf War and Health Volume 11 evaluates the scientific and medical literature on reproductive and developmental effects and health outcomes associated with Gulf War and Post 9 11 exposures and designates research areas requiring further scientific study on potential health effects in the descendants of veterans of any era

Gulf War and Health Institute of Medicine, Division of Health Promotion and Disease Prevention, Committee on Health Effects Associated with Exposures During the Gulf War, 2000-12-28 The men and women who served in the Gulf War theater were potentially exposed to a wide range of biological and chemical agents Gulf War and Health Volume 1 assesses the scientific literature concerning the association between these agents and the adverse health effects currently experienced by a large number of veterans

Gulf War and Health Carolyn Fulco, Catharyn T. Liverman, Harold C. Sox, 2000 Although the Gulf War lasted but a few days many combat troops have suffered lingering health problems that they attribute to their wartime service In an effort to respond to the health concerns of veterans and their families the Department of Veterans Affairs contracted with the Institute of Medicine IOM to study the scientific evidence concerning associations between agents to which Gulf War veterans may have been exposed and adverse health effects These are the reports from those studies

Strategies to Protect the Health of Deployed U.S. Forces.

Analytical Framework for Assessing Risks, 2000 The goal of this paper is to recommend to the Department of Defense DoD a preventive research strategy for deployed U S forces to prevent future illness from toxicological interactions from potentially harmful agents By doing so it is implicit that potential health risks exist in deployments because of possible exposures to multiple chemicals drugs and biologics under stressful environmental and occupational conditions similar to those in the Persian Gulf War This conclusion was reached based on the author s knowledge of toxicological interactions among chemicals and other agents and his assessment of the available literature a variable even though any and all such risk predictions are by definition made in time From this recognition it was concluded that something that is basically flawed cannot be fixed Therefore a new risk assessment paradigm that includes time as a variable of toxicity is being suggested it is clear that although dose is a simple function number of molecules time is a complex variable which runs on many different scales at least three of which are interacting with dose to provide the complexity that seems to have bewildered generations of toxicologists The three time scales are the toxicokinetic and toxicodynamic half lives and the frequency of exposure Thus there are three liminal conditions

Assessing the Effects of the Gulf of Mexico Oil Spill on Human Health Institute of Medicine, 2010-09-01 From the origin of the leak to the amount of oil released into the environment to the spill s duration the 2010 Gulf of Mexico oil spill poses unique challenges to human health The risks associated with extensive prolonged use of dispersants with oil fumes and with particulate matter from controlled burns are also uncertain There have been concerns about the extent to which hazards such as physical and chemical exposures and social and economic disruptions will impact the overall health of people who live and work near the area of the oil spill Although studies of previous oil spills provide some basis for identifying and mitigating the human health effects of these exposures the existing data are insufficient to fully understand and predict the overall impact of hazards from the Deepwater Horizon oil spill on the health of workers volunteers residents visitors and special populations

Assessing the Effects of the Gulf of Mexico Oil Spill on Human Health identifies populations at increased risks for adverse health effects and explores effective communication strategies to convey health information to these at risk populations The book also discusses the need for appropriate surveillance systems to monitor the spill s potential short and long term health effects on affected communities and individuals

Assessing the Effects of the Gulf of Mexico Oil Spill on Human Health is a useful resource that can help policy makers public health officials academics community advocates scientists and members of the public collaborate to create a monitoring and surveillance system that results in actionable information and that identifies emerging health risks in specific populations

Protecting Those Who Serve: Strategies to Protect the Health of Deployed U.S. Forces, 2000 The 670 000 service members deployed in 1990 1991 to Southwest Asia for Operations Desert Shield and Desert Storm the Gulf War were different from the troops deployed in previous similar operations they were more ethnically diverse there were more women and more parents and more activated members of the Reserves and National Guard were uprooted from civilian jobs The overwhelming victory that

they achieved in the Gulf War has been shadowed by subsequent concerns about the long term health status of those who served Various constituencies including a significant number of veterans speculate that unidentified risk factors led to chronic medically unexplained illnesses and these constituencies challenge the depth of the military's commitment to protect the health of deployed troops Recognizing the seriousness of these concerns the U S Department of Defense DoD has sought assistance over the past decade from numerous expert panels to examine these issues DoD 1994 National Institutes of Health Technology Workshop Panel 1994 IOM 1996 a b 1997 Presidential Advisory Committee on Gulf War Veterans Illnesses 1996 Although DoD has generally concurred in the findings of these committees few concrete changes have been made at the field level The most important recommendations remain unimplemented despite the compelling rationale for urgent action A Presidential Review Directive for the National Science and Technology Council to develop an interagency plan to address health preparedness for future deployments led to a 1998 report titled A National Obligation National Science and Technology Council 1998 Like earlier reports it outlines a comprehensive program that can be used to meet that obligation but there has been little progress toward implementation of the program *Airborne Hazards Related to Deployment* The Borden Institute, U.S. Army Medical Department, Coleen P Baird, Deanna K Harkins, 2015-04-30 Developed from the Airborne Hazards Symposium held in Washington DC in August 2012 this book covers diagnosis and workup of symptomatic individuals exposure characterization current epidemiology the potential role of pulmonary function testing spirometry in surveillance strategic research planning clinical follow up and registries risk communication etc Symposium presentations were delivered by a diverse group of scientific experts and contain valuable veteran perspectives This book represents a compendium of what is currently known regarding the potential long term health consequences of exposure to airborne hazards during Operation Enduring Freedom Operation Iraqi Freedom and Operation New Dawn deployments Airborne Hazards Related to Deployment presents a balanced comprehensive approach to furthering the understanding of airborne hazards during deployments and other military operations ultimately improving airborne hazard prevention protection and avoidance while improving healthcare and minimizing adverse health outcomes of our service members and veterans
