Stratification In Cognition And Consciousness Advances In Consciousness Research:

Stratification in Cognition and Consciousness Bradford H. Challis, Boris Mitrofanovich Velichkovski?, 1999-01-01 The notion of stratification has played an important role in linguistics and evolutionary studies for some time but its role in cognitive science has not yet been well articulated and identified What is meant by stratification What is the role and value of stratification in the contemporary study of cognition and consciousness This collective volume speaks to these questions The twelve articles in the book cover a range of relevant issues including a the vertical dimension and modularity of visual processing search and attention b the stratification of encoding and retrieval processes in memory c the hierarchical nature of conscious and unconscious components of memory and d the levels of awareness and varieties of conscious experience The volume presents stimulating and self contained articles for researchers and students of experimental psychology and neuroscience and is suitable for an advanced university course Series B

Spatial Cognition Seán Ó Nualláin, 2000 Spatial Cognition brings together psychology computer science linguistics and geography discussing how people think about space our internal cognitive maps and spatial perception and how we communicate about space for instance giving route directions or using spatial metaphors The technological applications adding dynamism to the area include computer interfaces educational software multimedia and in car navigation systems On the experimental level themes as varied as gender differences in orientation and of course wholly unrelated the role of the hippocampus in rodent navigation are described Much detailed analysis and computational modeling of the structure of short term memory STM is discussed The papers were presented at the 1998 annual meeting of the Cognitive Science Society of Ireland Mind III Series B

The Oxford Handbook of Memory Endel Tulving, Fergus I. M. Craik, 2005-05-05 The strengths and weaknesses of human memory have fascinated people for hundreds of years so it is not surprising that memory research has remained one of the most flourishing areas in science During the last decade however a genuine science of memory has emerged resulting in research and theories that are rich complex and far reaching in their implications Endel Tulving and Fergus Craik both leaders in memory research have created this highly accessible guide to their field In each chapter eminent researchers provide insights into their particular areas of expertise in memory research Together the chapters in this handbook lay out the theories and presents the evidence on which they are based highlights the important new discoveries and defines their consequences for professionals and students in psychology neuroscience clinical medicine law and engineering

Sisyphus's Boulder Eric Dietrich, Valerie Gray Hardcastle, 2005-02-17 Consciousness lies at the core of being human Therefore to understand ourselves we need a theory of consciousness In Sisyphus's Boulder Eric Dietrich and Valerie Hardcastle argue that we will never get such a theory because consciousness has an essential property that prevents it from ever being explained Consequently philosophical debates over materialism and dualism are a waste of time Scientific explanations of consciousness fare no better Scientists do study consciousness and such investigations will continue to grow and advance

However none of them will ever reveal what consciousness is In addition given the centrality of consciousness in philosophy Dietrich and Hardcastle claim that philosophy itself needs to change That the central problems of philosophy persist is actually a profound epistemic fact about humans Philosophy then is a limit to what humans can understand Series A *The Caldron of Consciousness* Ralph D. Ellis, Natika Newton, 2000-01-01 These new studies by prominent neuroscientists psychologists and philosophers work toward a coherent framework for understanding emotion and its contribution to the functioning of consciousness in general as an aspect of self organizing embodied subjects Distinguishing consciousness from unconscious information processing hinges on the role of motivating emotions in all conscious modalities and how emotional brain processes interact with those traditionally associated with cognitive function Computationally registering processing sensory signals e g in the occipital lobe or area V4 by itself does not result in perceptual consciousness which requires subcortical structures such as amygdala hypothalamus and brain stem This interdisciplinary anthology attempts to understand the complexity of emotional intentionality why the role of motivation in self organizing processes is crucial in distinguishing conscious from unconscious processes how emotions account for agency and how an adequate approach to emotion motivation can address the traditional mind body problem through a holistic understanding of the conscious behaving organism Series B *The Structure and Development of Self-Consciousness* Dan Zahavi, Thor Grünbaum, Josef Parnas, 2004-09-23 Self consciousness is a topic of considerable importance to a variety of empirical and theoretical disciplines such as developmental and social psychology cognitive neuroscience psychiatry and philosophy This volume presents essays on self consciousness by prominent psychologists cognitive neurologists and philosophers Some of the topics included are the infants sense of self and others theory of mind phenomenology of embodiment neural mechanisms of action attribution and hermeneutics of the self A number of these essays argue in turn that empirical findings in developmental psychology phenomenological analyses of embodiment or studies of pathological self experiences point to the existence of a type of self consciousness that does not require any explicit I thought or self observation but is more adequately described as a pre reflective embodied form of self familiarity The different contributions in the volume amply demonstrate that self consciousness is a complex multifaceted phenomenon that calls for an integration of different complementary interdisciplinary perspectives Series B Consciousness and Intentionality Grant Gillett, John McMillan, 2001 Is there an internal relationship between consciousness and intentionality Can mental content be described in such a way so as to avoid dualism What is the influence of social context upon consciousness conceptions of self and mental content This book considers questions such as these and argues for a conception of consciousness mental content and intentionality that is anti Cartesian in its major tenets Focusing upon the rule governed nature of concepts and the grounding of the rules for concept use in the practical world intentional consciousness emerges as a phenomena that depends upon social context Given that dependence the authors consider and set aside attempts to reduce human consciousness and intentionality to phenomena

explicable at biological or neuroscientific levels Series A **Advances in Cognitive Research, Artificial Intelligence and Neuroinformatics** Boris M. Velichkovsky, Pavel M. Balaban, Vadim L. Ushakov, 2021-04-17 This book reports on theoretical and experimental research answering key questions in neuroscience philosophy of mind and cognitive research It gives a special emphasis on findings achieved within the territory of the former U S S R which has remained largely unknown to an international readership The volume gathers authoritative studies on cognitive development consciousness attention and perception It covers research on eye movements language speech and semantics emotion as well as brain functional states and a variety of decision making processes It also highlights important advances in cognitive robotics and artificial intelligence discussing brain computer interfaces and other practically relevant technologies It includes studies on human subjects in both healthy and disease conditions and investigations on the molecular mechanisms of cognition in animal models Chapters are based on invited lectures and peer reviewed contributions to the 9th International Conference on Cognitive Sciences Intercognsci 2020 held on October 10 16 2020 in Moscow The conference was organized by the Interregional Association of Cognitive Studies with the participation of the Pavlov Society for Neurophysiology and Higher Nervous Activity and supported by the Russian Academy of Sciences the Russian Foundation for Basic Research and a number of the north eastern European research institutions All in all this book provides cognitive scientists around the world with a timely snapshot of interdisciplinary research and cutting edge models and a major source of inspiration for future collaborations in the areas of artificial intelligence and cognitive neuroscience *Investigating Phenomenal Consciousness* Max Velmans, 2000-01-01 How can one investigate phenomenal consciousness As in other areas of science the investigation of consciousness aims for a more precise knowledge of its phenomena and the discovery of general truths about their nature This requires the development of appropriate first person second person and third person methods This book introduces some of the creative ways in which these methods can be applied to different purposes e g to understanding the relation of consciousness to brain to examining or changing consciousness as such and to understanding the way consciousness is influenced by social clinical and therapeutic contexts To clarify the strengths and weaknesses of different methods and to demonstrate the interplay of methodology and epistemology the book also suggests a number of maps of the consciousness studies terrain that place different approaches to the study of consciousness into a broader interdisciplinary context Series A **Microgenetic approach to the conscious mind** Talis Bachmann, 2000 Many secrets of nature have been discovered since we have a better understanding of microstructures for example subatomic spheres in physics and genetic structures in biochemistry This book is set to convey an overview of the history methods findings and theoretical accounts of microgenetic research in consciousness and experimental psychology The reader will find information about how conscious percepts unfold within only a fraction of a second In a sense and according to the microgenetic hypothesis our subjectively experienced perceptual image undergoes formation similar to the process of developing a photograph Yet the time scale of

the awareness related perceptual development is much finer and therefore accessible only to observation armed with special experimental procedures that are exposed in this book In addition the author presents empirical findings and theoretical interpretations from his own lab Professor Talis Bachmann has been active in microgenetic research on attention perception and consciousness for more than 25 years Series B *Individual Differences in Conscious Experience* Robert G. Kunzendorf, Benjamin Wallace, 2000 *Individual Differences in Conscious Experience* is intended for readers with philosophical psychological or clinical interests in subjective experience It addresses some difficult but important issues in the study of consciousness subconsciousness and self consciousness The book s fourteen chapters are written by renowned pioneering researchers who collectively have published more than fifty books and more than one thousand journal articles The editors introductory chapter frames the book s subtext that mind brain theories embodying the constraints of individual differences in subjective experience should be given greater credence than nomothetic theories ignoring those constraints The next five chapters describe research and theory pertaining to individual differences in conscious sensations specifically individual differences in pain perception phantom limbs gustatory sensations and mental imagery Then two succeeding chapters focus on individual differences in subconsciousness The final six chapters address individual differences in altered states of self consciousness dreams hypnotic phenomena and various clinical syndromes Series B **Psychological Concepts and Biological Psychiatry** Peter Zachar, 2000 This interdisciplinary work addresses the question What role should psychological conceptualization play for thinkers who believe that the brain is the organ of the mind It offers readers something unique both by systematically comparing the writings of eliminativist philosophers of mind with the writings of the most committed proponents of biological psychiatry and by critically scrutinizing their shared anti anthropomorphism from the standpoint of a diagnostician and therapist Contradicting the contemporary assumption that common sense psychology has already been proven futile and we are just waiting for an adequate scientifically based replacement this book provides explicit philosophical and psychological arguments showing why if they did not already have both cognitive and psychodynamic psychologies philosophers and scientists would have to invent them to better understand brains Series A **The Primacy of Movement** Maxine Sheets-Johnstone, 1999-01-01 Through diligent and rigorous attention to both natural history and phenomenological accounts of kinetic phenomena particularly the phenomenon of self movement this interdisciplinary book brings to the fore the long neglected topic of animate form and with it a long neglected inquiry into the significance of animation It addresses methodological and foundational issues at length **Beyond Dissociation** Yves Rossetti, Antti Revonsuo, 2000 Analysis and dissociation have proved to be useful tools to understand the basic functions of the brain and the mind which therefore have been decomposed to a multitude of ever smaller subsystems and pieces by most scientific approaches However the understanding of complex functions such as consciousness will not succeed without a more global consideration of the ways the mind brain works This implies that synthesis rather than analysis should be applied to the brain

The present book offers a collection of contributions ranging from sensory and motor cognitive neuroscience to mood management and thought which all focus on the dissociation between conscious explicit and nonconscious implicit processing in different cognitive situations. The contributions in this book clearly demonstrate that conscious and nonconscious processes typically interact in complex ways. The central message of this collection of papers is: In order to understand how the brain operates as one integrated whole that generates cognition and behaviour we need to reassemble the brain and mind and put all the conscious and nonconscious pieces back together again.

Series B *The Evolution of Human Language*
Wolfgang Wildgen, 2004-06-30 Wolfgang Wildgen presents three perspectives on the evolution of language as a key element in the evolution of mankind in terms of the development of human symbol use.

- 1 He approaches this question by constructing possible scenarios in which mechanisms necessary for symbolic behavior could have developed on the basis of the state of the art in evolutionary anthropology and genetics.
- 2 Non linguistic symbolic behavior such as cave art is investigated as an important clue to the developmental background to the origin of language. Creativity and innovation and a population's ability to integrate individual experiments are considered with regard to historical examples of symbolic creativity in the visual arts and natural sciences.
- 3 Probable linguistic fossils of such linguistic innovations are examined. The results of this study allow for new proposals for a protolanguage and for a theory of language within a broader philosophical and semiotic framework and raises interesting questions as to human consciousness, universal grammar and linguistic methodology.

Series B

Curious Emotions Ralph D. Ellis, 2005-04-26 Emotion drives all cognitive processes largely determining their qualitative feel, their structure and in part even their content. Action initiating centers deep in the emotional brain ground our understanding of the world by enabling us to imagine how we could act relative to it based on endogenous motivations to engage certain levels of energy and complexity. Thus understanding personality, cognition, consciousness and action requires examining the workings of dynamical systems applied to emotional processes in living organisms. If an object's meaning depends on its action affordances then understanding intentionality in emotion or cognition requires exploring why emotion is the bridge between action and representational processes such as thought or imagery and this requires integrating phenomenology with neurophysiology. The resulting viewpoint, enactivism, entails specific new predictions and suggests that emotions are about the self-initiated actions of dynamical systems, not reactive responses to external events. Consciousness is more about motivated anticipation than reaction to inputs.

Series A *Brain and Being* Gordon G. Globus, Karl H.

Pribram, Giuseppe Vitiello, 2004-09-17 This book results from a group meeting held at the Institute for Scientific Exchange in Torino, Italy. The central aim was for scientists to think together in new ways with those in the humanities inspired by quantum theory and especially quantum brain theory. These fields of inquiry have suffered conceptual estrangement but now are ripe for rapprochement if academic parochialism is put aside. A prevalent theme of the book is a moving away from individual elements and individual actors acting upon each other toward a coordinate hermeneutic dynamics that manifests

as a coherent totality Among the topics covered are image in photography and in neuroscience language time brain and mathematics quantum brain dynamics and quantum communication **Memory and Understanding** Renate Bartsch,2005-01-01 This book treats memory and understanding on two levels on the phenomenological level of experience on which a theory of dynamic conceptual semantics is built and on the neuro connectionist level which supports the capacities of concept formation remembering and understanding A neuro connectionist circuit architecture of a constructive memory is developed in which understanding and remembering are modelled in accordance with the constituent structures of a dynamic conceptual semantics Consciousness emerges by circuit activation between conceptual indicators and episodic indices with the sensory motor emotional and proprioceptual areas This theory of concept formation remembering and understanding is applied to Proust s *A la recherche du temps perdu* with special attention to the author s excursions into philosophical and aesthetic issues Under this perspective Proust s work can be seen as an artistic exploration into our capacity of understanding whereby the unconscious the memory is exteriorized in consciousness by presenting the experienced episodes in the conceptual order of similarity and contiguity through our capacity of concept formation Series A

The Development of Implicit and Explicit Memory Carolyn K. Rovee-Collier,Harlene Hayne,Michael Colombo,2001-01-01 This is the only book that examines the theory and data on the development of implicit and explicit memory It first describes the characteristics of implicit and explicit memory including conscious recollection and tasks used with adults to measure them Next it reviews the brain mechanisms thought to underlie implicit and explicit memory and the studies with amnesics that initially prompted the search for different neuroanatomically based memory systems Two chapters review the Jacksonian first in last out principle and empirical evidence for the hierarchical appearance and dissolution of two memory systems in animal models rats nonhuman primates children and normal amnesic adults Two chapters examine memory tasks used with human infants and evidence of implicit and explicit memory during early infancy Three final chapters consider structural and processing accounts of adult memory dissociations their applicability to infant memory dissociations and implications of infant data for current concepts of implicit and explicit memory Series B **Consciousness and Self-Consciousness**

Rocco J. Gennaro,1996-03-20 This interdisciplinary work contains the most sustained attempt at developing and defending one of the few genuine theories of consciousness Following the lead of David Rosenthal the author argues for the so called higher order thought theory of consciousness This theory holds that what makes a mental state conscious is the presence of a suitable higher order thought directed at the mental state In addition the somewhat controversial claim that consciousness entails self consciousness is vigorously defended The approach is mostly analytic in style and draws on important recent work in cognitive science perception artificial intelligence neuropsychology and psychopathology However the book also makes extensive use of numerous Kantian insights in arguing for its main theses and in turn sheds historical light on Kant s theory of mind A detailed analysis of the relationships between self consciousness behavior memory intentionality and de se

attitudes are examples of the central topics to be found in this work Series A
