Streets And The Shaping Of Towns And Cities:

Streets and the Shaping of Towns and Cities Michael Southworth, Eran Ben-Joseph, 2013-04-22 The topic of streets and street design is of compelling interest today as public officials developers and community activists seek to reshape urban patterns to achieve more sustainable forms of growth and development *Streets and the Shaping of Towns and Cities* traces ideas about street design and layout back to the early industrial era in London suburbs and then on through their institutionalization in housing and transportation planning in the United States It critiques the situation we are in and suggests some ways out that are less rigidly controlled more flexible and responsive to local conditions Originally published in 1997 this edition includes a new introduction that addresses topics of current interest including revised standards from the Institute of Transportation Engineers changes in city plans and development standards following New Urbanist Smart Growth and sustainability principles traffic calming and ecologically oriented street design **Tomorrow's Cities,**

Tomorrow's Suburbs William Lucy, 2020-06-16 Cities ruled the first half of the 20th century the second half belonged to the suburbs Will cities become dominant again Can the recent decline of many suburbs be slowed This book predicts a surprising outcome in the decades long tug of war between urban hubs and suburban outposts The authors document signs of resurgence in cities and interpret omens of decline in many suburbs They offer an extensive analysis of the 2000 census with insights into the influence of income disparities housing age and size racial segregation immigration and poverty They also examine popular perceptions and misperceptions about safety and danger in cities suburbs and exurbs that affect settlement patterns This book offers evidence that the decline of cities can continue to be reversed tempered by a warning of a mid life crisis looming in the suburbs It also offers practical policies for local action steps that planners elected officials and citizens can take to create an environment in which both cities and suburbs can thrive **Killed by a Traffic Engineer** Wes

Marshall, 2024-06-04 In the US we are nearing four million road deaths since we began counting them in 1899 The numbers are getting worse in recent years yet we continue to accept these deaths as part of doing business There has been no examination of why we engineer roads that are literally killing us Fixing the carnage on our roadways requires a change in mindset and a dramatic transformation of transportation This goes for traffic engineers in particular because they are still the ones in charge of our streets In *Killed by a Traffic Engineer* civil engineering professor Wes Marshall shines a spotlight on how little science there is behind the way that our streets are engineered which leaves safety as an afterthought While traffic engineers are not trying to cause deliberate harm to anyone he explains they are guilty of creating a transportation system whose designs remain largely based on plausible but unproven conjecture Thoroughly researched and compellingly written *Killed by a Traffic Engineer* shows how traffic engineering research is outdated and unexamined at its best and often steered by an industry and culture considering only how to get from point A to B the fastest way possible to the detriment of safety quality of life equality and planetary health Marshall examines our need for speed and how traffic engineers

disconnected it from safety the focus on capacity and how it influences design blaming human error relying on faulty data how liability drives reporting measuring road safety outcomes and the education and reeducation of traffic engineers Killed by a Traffic Engineer is ultimately hopeful about what is possible once we shift our thinking and demand streets engineered for the safety of people both outside and inside of cars It will make you look at your city and streets and traffic engineers in a new light and inspire you to take action

taylorfrancis.com **Historic Residential Suburbs** David L. Ames, Linda Flint McClelland, 2002 **Remaking the City Street Grid** Fanis Grammenos, G.R. Lovegrove, 2015-03-18 Of all the elements of a neighborhood the pattern of streets and their infrastructure is the most enduring. Given the 20th century's additions to the range of transportation means—trains, subways, buses, trucks, bicycles, motorbikes, and cars—all vying for space and effectiveness, a fresh look at the streets is warranted. This book contributes a new system of neighborhood design with a focus on contemporary planning priorities. Drawing lessons from historic and current development, it proposes a new pattern more fitting for modern culture, addressing such issues as walkability, mobility, health, safety, security, cost, and greenhouse gas emissions. Case studies of national and international neighborhoods and districts based on the new network model demonstrate its application in real-world situations.
