## **Stress And Coping In Child Health:**

Stress and Coping in Child Health Annette M. La Greca, Lawrence J. Siegel, Jan L. Wallander, C. Eugene Walker, 1991-12-20 Until recently much of the literature on stress and coping in children was based primarily on conceptual and theoretical models developed for adults. Researchers now recognize the importance of assessing children's responses within a developmental context. This volume, the first in a new series sponsored by the Society of Pediatric Psychology, presents an in-depth examination of current research on pediatric stress and coping and its implications for clinical practice. With contributions from experts at the forefront of pediatric and child health psychology, the volume is divided into three sections. The first two focus on various aspects of research while the third discusses clinical applications. Each section opens with an in-depth introduction by the editors. Part I, addressing conceptual, developmental, and methodological issues, also covers the role of temperament in understanding coping with pediatric conditions, psychophysiological aspects of stress, and the relevance of taking into account contextual factors in children's coping responses. Part II focuses on the coping responses of both children and their families faced with either specific medical stressors, invasive medical procedures, anesthesia, induction, dental procedures, or chronic illnesses such as diabetes or cancer. Several chapters demonstrate the use of conceptual, multivariate approaches for working with chronic pediatric conditions. Chapters in Part III report on empirically based procedures for clinical intervention. Approaches discussed include biologically oriented procedures, cognitive and behavioral coping strategies for stressful situations related to chronic illness, and a variety of cognitive modeling and environmental coping strategies for children undergoing acutely aversive medical procedures. In addition, this section includes a chapter that illuminates how a sophisticated understanding of context can significantly improve the chances of an intervention's successful outcome. Bringing the reader up to date on the latest developments, this volume is an invaluable resource for all researchers in the field of pediatric psychology and an ideal reference for clinicians and physicians who confront the issues of stress and coping in working with children. *Children's Stress and Coping* Elaine Shaw

Sorensen, 1993-04-09 In spite of the increase in stress coping research, little is known about how stress is actually perceived by children in the family setting. This is due in part to the real difficulties involved in collecting data on children's subjective experiences. In addition, what we currently know about children's stress and coping has traditionally derived from adult reporters rather than from the children themselves. Filling a gap in the literature, this volume explores theoretical and methodological issues related to the study of children and families in general and to stress coping phenomena from the child's perspective in particular. The book challenges traditional deference to adult assessment of stress and coping among children by drawing data from both parents and children, revealing significant contrasts between the two. Through open-ended qualitative measures of children's diaries and drawings, the book offers a glimpse into the inner world of the child and gives scholarly expression to the fact that children can and readily will articulate needs and perceptions if given an

appropriate vehicle The book's well documented chapters discuss traditional approaches to stress and coping implications for current child and family study specific needs related to the study of children within the family and implications for theory and methods Taxonomies of children's stressors coping responses and coping resources are drawn from the data and examined in detail The book concludes with suggestions for future research and clinical practice Providing fascinating insight into children's actual experience of stress and coping this volume lays the groundwork for ongoing research scholarship and therapeutic practice Academicians practitioners and graduate students in family studies child development psychology and nursing will find this book invaluable in shedding light on the often overlooked culture of children *Childhood Stress* L. Eugene Arnold, 1990-10-19
