organization can play a vital role in limiting people's pain and creating opportunities. However, despite generous severance packages and outplacement services, many organizations have been little help to people who lose their jobs, suffer job stress, face unreasonably demanding bosses or suffer from physical handicaps or chronic illnesses. Most of the burden falls on individuals and their families. Assistance can and should come from employers, government agencies, educational institutions, and religious organizations. While the book focuses on the perspectives of people who have been or may be affected by career barriers, the material should be of interest to a broad range of readers, in particular academics who study careers, practitioners in the fields of training and development, and government officials who set public policy that affects displaced workers.

Death by Despair Ramón Martínez de Pisón, Ramón Martínez de Pisón L., 2006 Suicide is one of the major causes of violent death in our societies. The fact that adolescents and the elderly are the two population groups with the highest rates of suicide challenges many assumptions of the past regarding human development. By the time they reach their teens, many adolescents lack the necessary skills to deal with stressful events in a healthy, life-enhancing way. At the same time, the last stage of human development is not necessarily one in which people feel fulfilled. In this book, Ramón Martínez de Pisón expands the theory of Lazarus and Folkman (1984) for coping with stress in order to show that toxic shame is one of the

most important personal and environmental constraints inhibiting one's ability to cope with suicide and suicide related events in a healthy way

Qualitative Researching with Text, Image and Sound Paul Atkinson, Martin W Bauer, George Gaskell, 2000-06-22 This excellent text will introduce advanced students and remind senior researchers of the availability of a broad range of techniques available for the systematic analysis of social data that is not numeric. It makes the key point that neither quantitative nor qualitative methods are interpretive and at the same time demonstrates once and for all that neither a constructivist perspective nor a qualitative approach needs to imply abandonment of rigor. That the chapters are written by different authors makes possible a depth of expertise within each that is unusually strong. Susanna Hornig Priest Texas A
