Stress Corrosion Cracking Control

Measures. 4. Aluminum Alloys B. F. BROWN,AMERICAN UNIV WASHINGTON DC DEPT OF CHEMISTRY.,1975 The most prevalent form of SCC service failures in aluminum alloys is caused by a combination of water aqueous solutions or atmospheric moisture alloy of susceptible composition and structure and sustained tensile stresses most often caused by heat treatment or assembly The principal practical measures to control SCC are 1 select an alloy of minimum susceptibility 2 for wrought alloy take precautions not to impose high sustained stresses across the short transverse grain direction unless the alloy and temper confer low susceptibility 3 keep water and water vapor from the metal surface by providing natural drainage and by painting with an inhibitor such as chromate 4 minimize opportunities for chlorides to concentrate 5 when using a susceptible alloy and temper compressively stress the metal surface by peening or rolling followed by painting 6 use cathodic protection 7 do not permit mercury or its compounds in close proximity to any aluminum structure

Metallurgy and Corrosion Control in Oil and Gas Production

Robert Heidersbach,2018-09-17 Details the proper methods to assess prevent and reduce corrosion in the oil industry using today s most advanced technologies This book discusses upstream operations with an emphasis on production and pipelines which are closely tied to upstream operations It also examines protective coatings alloy selection chemical treatments and cathodic protection the main means of corrosion control The strength and hardness levels of metals is also discussed as this affects the resistance of metals to hydrogen embrittlement a major concern for high strength steels and some other alloys It is intended for use by personnel with limited backgrounds in chemistry metallurgy and corrosion and will give them a general understanding of how and why corrosion occurs and the practical approaches to how the effects of corrosion can be mitigated Metallurgy and Corrosion Control in Oil and Gas Production Second Edition updates the original chapters while including a new case studies chapter Beginning with an introduction to oilfield metallurgy and corrosion control the book provides in depth coverage of the field with chapters on chemistry of corrosion corrosive environments materials forms of corrosion corrosion control inspection monitoring and testing and oilfield equipment Covers all aspects of upstream oil and gas production from downhole drilling to pipelines and tanker terminal operations Offers an introduction to corrosion for entry level corrosion control specialists Contains detailed photographs to illustrate descriptions in the text Metallurgy and Corrosion Control in Oil and Gas Production Second Edition is an excellent book for engineers and related professionals in the oil and gas production industries It will also be an asset to the entry level corrosion control professional who may have a theoretical background in metallurgy chemistry or a related field but who needs to understand the practical limitations of

large scale industrial operations associated with oil and gas production **Stress Corrosion Cracking Control Measures.**

5. Titanium Alloys B. F. BROWN, AMERICAN UNIV WASHINGTON DC DEPT OF CHEMISTRY., 1975 The practical SCC hazards to titanium involve a wide range of environments For some groups of environments such as natural waters and nearly neutral aqueous solutions the cracking occurs only in the presence of a pre existing crack like flaw and fracture mechanics type tests readily characterize the SCC behavior of alloys Unalloyed titanium and the widely used Ti 6%al 4%V alloy are reasonably resistant to SCC in these environments For N₂O₄ and red fuming nitric acid practical control of the problem is available through controlling the composition of the oxidizers for which standard specifications are available For the hot salt cracking problem during heat treatment meticulous cleanliness of the titanium backed up preferably by excluding moisture and oxygen from the heat treating atmosphere serves to control the problem Though untried in practice a nickel barrier paint may be useful when contamination at elevated temperatures cannot be avoided in service the alternative is to design for low operating stresses For some environments such as methanol mercury cadmium or silver the strategy is to exclude them from titanium surfaces Stress Corrosion Cracking Control Measures B. Metals and Hydrogen-Related Phenomena J. Flis, 2016-01-11 It is estimated that about 40% of the annual production of metals is used to repair or replace materials damaged by corrosion Corrosion causes waste of the natural material and energy resources it creates serious materials problems for many technologies and adversely affects almost every area of engineering The use of metals in various aggressive environments has resulted in an extremely wide diversity of corrosion problems This book presents a collection of concise reviews written by experts in the field on selected topics of metallic corrosion and on some aspects of interaction of hydrogen with metals A comprehensive range of problems is examined including localized corrosion high temperature corrosion in liquid metals and molten salts transport control in corrosion processes entry of hydrogen into metals hydrogen embrittlement and hydrogen reactions with metals The variety of topics covered in the book will provide corrosion scientists engineers university lecturers and students alike with an interdisciplinary approach to solving problems of materials degradation and surface processes in metal corrosion LaQue's Handbook of Marine Corrosion David A. Shifler, 2022-07-01 The new edition of LaQue's classic text on marine corrosion providing fully updated control engineering practices and applications Extensively updated throughout the second edition of La Que's Handbook of Marine Corrosion remains the standard single source reference on the unique nature of seawater as a corrosive environment Designed to help readers reduce operational and life cycle costs for materials in marine environments this authoritative resource provides clear guidance on design materials selection and implementation of corrosion control engineering practices for materials in atmospheric immersion or wetted marine environments Completely rewritten for the 21st century this new edition reflects current environmental regulations best practices materials and processes with special emphasis placed on the engineering behavior and practical applications of materials Divided into three parts the book first

explains the fundamentals of corrosion in marine environments including atmospheric corrosion erosion microbiological corrosion fatigue environmental cracking and cathodic delamination The second part discusses corrosion control methods and materials selection that can mitigate or eliminate corrosion in different marine environments The third section provides the reader with specific applications of corrosion engineering to structures systems or components that exist in marine environments This much needed new edition Presents a comprehensive and up to date account of the science and engineering aspects of marine corrosion Focuses on engineering aspects descriptive behavior and practical applications of materials usage in marine environments Addresses the various materials used in marine environments including metals polymers alloys coatings and composites Incorporates current regulations standards and recommended practices of numerous organizations such as ASTM International the US Navy the American Bureau of Shipping the International Organization for Standardization and the International Maritime Organization Written in a clear and understandable style La Que s Handbook of Marine Corrosion Second Edition is an indispensable resource for engineers and materials scientists in disciplines spanning the naval maritime commercial shipping industries particularly corrosion engineers ship designers naval architects marine engineers oceanographers and other professionals involved with products that operate in marine environments

Corrosion and Corrosion Control R. Winston Revie, Herbert H. Uhlig, 2008-03-11 The classic book on corrosion science and engineering now in a valuable new edition The ability to prevent failures by managing corrosion is one of the main global challenges of the twenty first century However most practicing engineers and technologists have only a basic understanding of how they can actively participate in this urgent economic and environmental issue Now students and professionals can turn to this newly revised edition of the trusted *Corrosion and Corrosion Control* for coverage of the latest developments in the field including advances in knowledge new alloys for corrosion control and industry developments in response to public demand This Fourth Edition presents an updated overview of the essential aspects of corrosion science and engineering that underpin the tools and technologies used for managing corrosion enhancing reliability and preventing failures Although the basic organization of the book remains unchanged from the previous edition this new update includes An introduction to new topics including the element of risk management in corrosion engineering and new advanced alloys for controlling corrosion Expanded discussions on electrochemical polarization predicting corrosion using thermodynamics steel reinforcements in concrete and applications of corrosion control technologies in automotive nuclear and other industries A stronger emphasis on environmental concerns and regulations in the context of their impact on corrosion engineering A discussion of the challenge of reliability in nuclear reactors stainless steels the concept of critical pitting temperature and information on critical pitting potential CPP Complemented with numerous examples to help illustrate important points *Corrosion and Corrosion Control* Fourth Edition enables readers to fully understand corrosion and its control and in turn help reduce massive economic and environmental loss It is a must read for advanced undergraduates and
