Barnes, David C. Good, 2013-01-10 Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series It is the first time that this increasingly important subject has been included in the series and this

reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research. The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community. The volume is divided into five key sections. The first is a summary of current research on neural repair, recovery and plasticity. The authors have kept the topics readable for a non-scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice. The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition, outcome measurement and functional neuroimaging. The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems such as spasticity, pain, sexual functioning and dysphagia. Cognitive, emotional and behavioural problems are just as important and are covered in the next section with excellent chapters, for example, on memory and management of executive dysfunction. The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders. The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field. A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology.

International list of contributors including the leading workers in the field. Describes the advances which have occurred in clinical neurology and the neurosciences, their impact on the understanding of neurological disorders and on patient care.

Social Support and Psychiatric Disorder Traolach S. Brugha, 1995-08-24. This second volume in a series looking at the social dimensions of mental illness collates and critically examines the information currently available on social support as it impacts on mental health. The international team of contributors, each actively involved in both clinical and research work in this field, collectively covers the whole range of perspectives from biological mechanisms through to psychological and social theory. An overview of the latest published evidence and a description of the nature and origins of social support are followed by evidence from observational studies and specific interventions and trials. The text concludes with a summary which will act as a valuable resource for practitioners in their evaluation of social and psychological treatments and should also serve to stimulate further research and intervention trials. Practitioners and researchers in psychiatry, psychology and social work are certain to welcome this timely guide.

The SAGE Handbook of Mental Health and Illness David Pilgrim, Bernice Pescosolido, Anne Rogers, 2011. This title integrates the conceptual, empirical and evidence-based threads of mental health as an area of study, research and practice. It approaches mental health from two perspectives: firstly as a positive state of well-being and secondly as psychological difference or abnormality in its social context.
