Stress And Depression:

How to overcome stress and depression Iren Nova, Stress and depression are among the two most common health concerns in today's fast paced and modern world. As the decades go by more and more people are finding themselves in workplaces that brew stress and in situations that foster depression. Stress in itself is considered good by many medical professionals; stress keeps an individual alert, motivated and ready to respond to any kind of threat. People who have faced tough deadlines in work or have actively competed in sports know the positive effects of stress as it pushes the body to respond better and improve its performance. However, too much stress is believed to be one of the causes of major depression in individuals that are susceptible or predisposed to the condition. *Depression and Stress* Katie Marsico, 2013-08-01. Depression and stress affect close to 30 percent of all teens, a staggering statistic. Stress and anxiety can exhibit in teens by feeling overwhelmed, sad or depressed and tired. This book provides teens with the tools and vocabulary they need to express how they are feeling and when to seek help. Personal interviews with teens coping with depression and stress are revealed as well as warning signs, treatment options and most importantly, solutions. Sidebars, a relevant glossary of terms, current websites and science content are included in this detailed look into the teen issue of stress and depression. *Stress, the Brain and Depression* H. M. van Praag, E. R. de Kloet, J. van Os, 2004-05-20. Can traumatic life events cause depression? Studies generally point to a connection between adverse life events and depression. However, establishing a causal rather than associative connection, the key concern of this book, is more problematic. What neurobiological changes may be induced by stress and depression and to what extent do these changes correspond? The authors structure their examination around three major themes: the pathophysiological role of stress in depression, whether or not a subtype of depression exists that is particularly stress-inducible and finally, how best to diagnose and treat depression in relation to its biological underpinnings.
