Striking The Mother Lode In Science The Importance Of Age Time And Place:

Striking the Mother Lode in Science Paula E. Stephan, Sharon G. Levin, 1992 How much truth is there to the popular belief that science is a young person s game Is America s older scientific community retarding economic growth Using a unique data base and an interdisciplinary approach the authors address these and other questions They find evidence that exceptional contributions to science are more likely to be made by those under 40 Age matters but not nearly as much for average scientists Success in science also depends on RPRT being in the right place at the right time Not all generations of scientists have equal access to the type of jobs that foster productivity nor do they have the good fortune to be educated when path breaking events are occurring in their field Changing economic conditions in science have conspired to make those who entered science during the last 25 years less productive than their predecessors In addition extreme competition for jobs and grants can make scientists behave in a dysfunctional manner The authors conclude that the absence of a national science policy can cause serious problems for the United States and they outline a policy to boost productivity in American science Clearly written with many pointed examples this work will appeal to anyone interested in science or science policy

Global Mobility of Research Scientists Aldo Geuna, 2015-08-03 Global Mobility of Research Scientists The Economics of Who Goes Where and Why brings together information on how the localization and mobility of academic researchers contributes to the production of knowledge The text answers several questions including what characterizes nationally and internationally mobile researchers and what are the individual and social implications of increased mobility of research scientists Eight independent but coordinated chapters address these and other questions drawing on a set of newly developed databases covering 30 countries including the US the UK France Germany Italy Japan Russia and China among others Combines theoretically sound and empirically fascinating results in one volume that has international and interdisciplinary appeal Covers topics at the forefront of academic business and policy discussions Data used in the chapters available at a freely accessible website Capital Controversy, Post Keynesian Economics and the History of Economic Thought Philip Arestis, Gabriel Palma, Malcolm Sawyer, 2005-08-17 Harcourt has made substantial and wide ranging contributions to economics in general and to post Keynesian economics in particular In this volume more than forty leading economists pay tribute to and critically evaluate his work The contributors represent a wide range of schools in economics and include Nobel Laureates Paul Samuelson and Robert Solow The Economics of Open Access Thomas Eger, Marc Scheufen, 2018-06-29 Addressing the recent debate on how the future of academic publishing might look in a purely digital environment this book analyzes the experiences of researchers with as well as attitudes towards Open Access OA publishing Drawing on a unique in depth survey with more than 10 000 respondents from 25 countries Thomas Eger and Marc Scheufen discuss their findings in the light of recent policy attempts which have been trying to foster OA revealing considerable shortcomings and lack of knowledge on fundamental features of the academic publishing market Aging Harry R.

Moody, Jennifer R. Sasser, 2017-01-12 Presenting current research in an innovative text reader format Aging Concepts and Controversies Ninth Edition encourages students to become involved and take an informed stand on the major aging issues we face as a society Not simply a summary of research literature Harry R Moody and Jennifer R Sasser's text focuses on controversies and questions rather than on assimilating facts or arriving at a single correct view about aging and older people Drawing on their extensive expertise the authors first provide an overview of aging in three domains aging over the life course health care and the socioeconomic aspects of aging Each section is followed by a series of edited readings offering different perspectives from experts and specialists on that subject New readings focus on whether current federal spending on the elderly is sustainable and fair to other groups how older consumers are reshaping the business landscape and the challenges of marketing and selling to customers 60 and over More emphasis is placed on how social class and inequality earlier in life can shape our final years and the number of older Americans living in poverty The section on Aging and Health Care has been thoroughly updated to reflect the latest data about chronic diseases that affect the elderly government spending on health care and policy changes to programs like Medicaid and Medicare The section on the Social and Economic Outlook for an Aging Society gives the most current picture of the racial and ethnic diversity of older Americans their participation in the labor force and their income and wealth Recruitment, Retention, and Retirement in Higher **Education** Robert Louis Clark, Jennifer Ma, 2005-01-01 This book provides tools and insights for university and college administrators to use when evaluating changes in retirement policy and it presents valuable information in the form of case studies concerning changes in retention policies and retirement policies Lisa M Dickson Industrial and Labor Relations Review This volume a collection of papers presented at the 2004 TIAA CREF Institute conference on higher education contains many excellent chapters John Heuer Journal of Pension Economics and Finance This book enlightens the reader about two important policy issues health care provision and retirement plans by addressing both broad macro issues and specific concerns of higher education administrators Such content is both valuable and practical for the concerned higher education researcher and administrator Marc Kaulisch The Review of Higher Education Attracting and retaining highly qualified faculty is essential to maintaining productivity at institutions of higher education Colleges and universities are at a critical juncture in their history as they attempt to achieve their teaching and research goals This volume examines some of the most pressing employment and compensation issues confronting academic administrators Contributors discuss topics such as ageing of faculty changing economic conditions and shifts in faculty employment patterns rapid increases in health care costs and trends in retiree health insurance and adoption of phased and early retirement programs The volume also includes a series of case studies on how individual universities are confronting these challenges Institutions in these case studies include Syracuse University the University of North Carolina the University of California institutions in the Association of New American Colleges and other colleges and universities included in several surveys and research projects

This timely volume will appeal to academic administrators at colleges and universities in the US and internationally as they face the common challenges of rising employment costs faculty aging and global competition Researchers interested in the future of higher education economics and the academic labor market in general will find this a valuable addition to their The Road To Excellence K. Anders Ericsson, 2014-03-05 Excellence and the highest levels of performance in the arts and sciences sports and games have always been an object of fascination to both scientists and lay people Only during the last 20 years have scientists studied these levels of performance in the laboratory in order to identify their mediating mechanisms Contrary to the common belief that innate talents are the critical factors for exceptional performance investigators have found that acquired skills knowledge and physiological adaptations in response to intense practice are the primary mechanisms mediating the highest levels of performance This is the first and only book to examine how elite performers effect their exceptional accomplishments The world's leading researchers on expert performance and creative achievement review theories and recent findings from many different domains of expertise on how experts optimize improvement in their performance and eventually attain excellence Elite performers are shown to have engaged in deliberate practice activities specifically designed to improve their performance from an early age By age 20 they have often accumulated over 10 000 hours of practice The essential elements of deliberate practice such as specific goals to improve performance successive refinement through repetition feedback and instruction are explicated for different domains Although the content of practice tasks will necessarily differ from domain to domain investigators have found invariant characteristics for the optimal duration of practice sessions maximal amounts of daily practice the length of intense preparation around 10 years and ages of peak performance Some of the book s chapters extend the review to the acquisition of everyday life skills such as reading to the performance of teams of experts and to the development of creative achievement geniuses and artistic child prodigies The book concludes with commentaries by several outstanding scientists in psychology education and history of science who discuss the generalizability of presented ideas and raise issues for future issues EXTRA COPY It could be said that striving for excellence is what characterizes humanity or perhaps what characterizes humanity at its best Why do so few individuals ever reach the highest levels when so many start out on the Road to Excellence In this book the world's foremost researchers of expert performance in domains as diverse as sports medicine chess and the arts explore the similarities and differences in the extended and strenuous Road to Excellence taken by the successful individuals in each domain Their findings will intrigue and inspire readers who are themselves driven to achieve or who simply want to better understand the processes involved What Price Fame? Tyler Cowen, 2000 In a world where more people know who Princess Di was than who their own senators are where Graceland draws more visitors per year than the White House and where Michael Jordan is an industry unto himself fame and celebrity are central currencies In this intriguing book Tyler Cowen explores and elucidates the economics of fame Fame motivates the talented and draws like minded fans together But

it also may put profitability ahead of quality visibility above subtlety and privacy out of reach The separation of fame and merit is one of the central dilemmas Cowen considers in his account of the modern market economy He shows how fame is produced outlines the principles that govern who becomes famous and why and discusses whether fame seeking behavior harmonizes individual and social interests or corrupts social discourse and degrades culture Most pertinently Cowen considers the implications of modern fame for creativity privacy and morality Where critics from Plato to Allan Bloom have decried the guest for fame Cowen takes a more pragmatic optimistic view He identifies the benefits of a fame intensive society and makes a persuasive case that however bad fame may turn out to be for the famous it is generally good for society Aging and Old Age Richard A. Posner, 1995-12-18 Exploding the myth that the United States is on the brink of gerontological disaster this provocative and revealing book paints a surprisingly rich and unsentimental portrait of the millions of elderly people in the U S and offers fresh insight into a wide range of social and political issues relating to the elderly including health care crime social security and discrimination **International Perspectives on the Governance** of Higher Education Jeroen Huisman, 2009-03-28 Essential reading for policy makers institutional leaders managers advisors and scholars in the field of higher education International Perspectives on the Governance of Higher Education analyzes how the governance of higher education systems has evolved in recent years This volume is an authoritative overview with contributions from authors from the U K the Netherlands Denmark Portugal Norway Italy Ireland Austria Germany Canada the U S and Australia Comprehensive in coverage this volume explores how the use of disciplinary approaches and frameworks particularly from political science public administration and public policy help us to understand better the coordination of higher education systems This is an arduous but gratifying challenge given the current complexity of multi actor and multi level steering in higher education rife with unintended outcomes and unanticipated dynamics The edited volume looks to The role of government market and network steering in higher education systems Governance in the knowledge society How the use of disciplinary approaches help to better understand the steering policy processes and outcomes in higher education Empirical studies exploring governance issues across systems and over time within systems

Copyright Versus Open Access Marc Scheufen, 2014-12-29 This book addresses the recent debate about copyright law and its impact on the distribution of scientific knowledge from an economic perspective The focus is on the question whether a copyright regime or an open access regime is better suited to the norms and organizational structure in a purely global science community The book undertakes a thorough economic analysis of the academic journal market and showcases consequences of a regime change It also takes account of the Digital Divide debate reflecting issues in developing countries Finally a comprehensive analysis of legal action in the light of international Intellectual Property IP agreements offers prospects on the future of academic publishing Incentives and Performance Isabell M. Welpe, Jutta Wollersheim, Stefanie Ringelhan, Margit Osterloh, 2014-11-07 This book contributes to the current discussion in society politics and higher

education on innovation capacity and the financial and non financial incentives for researchers The expert contributions in the book deal with implementation of incentive systems at higher education institutions in order to foster innovation On the other hand the book also discusses the extent to which governance structures from economy can be transferred to universities and how scientific performance can be measured and evaluated This book is essential for decision makers in knowledge intensive organizations and higher educational institutions dealing with the topic of performance management

Essays in Public Sector Entrepreneurship David B. Audretsch, Albert N. Link, 2016-02-05 This book explores public sector entrepreneurship from an international perspective It features essays from eminent scholars in the field addressing entrepreneurial public policies from different countries Public sector entrepreneurship is at the cusp of becoming a watchword in international policy circles This book is a pioneer volume in this emerging field and provides topics and policies that are broadly applicable across different economies Public sector entrepreneurship refers to innovative public policy initiatives that generate greater economic prosperity by transforming a status quo economic environment into one that is more conducive to economic units engaging in creative activities in the face of uncertainty In today s economy public sector entrepreneurship affects that transformation primarily by increasing the effectiveness of knowledge networks that is by increasing the heterogeneity of experiential ties among economic units and the ability of those same economic units to exploit such diversity Through policy initiatives that are characterized by public sector entrepreneurship there will be more development of new technology and hence more innovation throughout the economy **Higher Education: Handbook of** Theory and Research John C. Smart, Michael B. Paulsen, 2012-04-25 Published annually since 1985 the Handbook series provides a compendium of thorough and integrative literature reviews on a diverse array of topics of interest to the higher education scholarly and policy communities Each chapter provides a comprehensive review of research findings on a selected topic critiques the research literature in terms of its conceptual and methodological rigor and sets forth an agenda for future research intended to advance knowledge on the chosen topic The Handbook focuses on twelve general areas that encompass the salient dimensions of scholarly and policy inquiries undertaken in the international higher education community The series is fortunate to have attracted annual contributions from distinguished scholars throughout the world Transformation of University Institutional and Organizational Boundaries Emilia Primeri, Emanuela Reale, 2015-11-02 An emerging issue in higher education studies is that of boundaries crossing This is the main topic of the book The transformation of University institutional and organizational boundaries Several signals of shifting boundaries can be envisaged in higher education and research institutions which could be glimpsed through organizations the institutions and changes to the academic profession That of boundaries crossing in Higher Education is a complex and heterogeneous issue which characterizes scientific knowledge today and represents a key issue when looking at University transformations across contexts and policies instruments and practices The analysis of boundaries supplies interpretative frameworks for the

interactions between the development of professions and disciplines as well as the relationships of the science with various parts of society such as state professionals and the market Fuelling further the discussion on HEIs transformations allows capturing changes in the function objectives and scope of higher education and research institutions the move beyond sectoral and disciplinary boundaries and the increasingly blurred boundaries of academic professions and of scientific work Public policies and HE reforms can push or impede the mentioned transformations but they can also derive from individual likelihood of moving in blurring spaces or from the transformations of the epistemic communities and the emergence of new fields and sectors Hence changes are there open to our observations Entrepreneurial Wage Dynamics in the Knowledge Economy Adam K. Korobow, 2012-12-06 The role that small firms and entrepreneurship play in economic development has been particularly contentious Joseph Schumpeter 1911 in his early work argued that through a process of creative destruction small and new firms would serve as agents of change and a catalyst for innovation and growth But he later rescinded this view instead concluding that large corporations were the engines of growth Just as it seemed that a consensus had emerged among scholars and policy makers that small business was at best superfluous and at worst a drag on growth and economic development David Birch provided evidence that in fact small firms were the engines of job creation The early skepticism of challenge to Birch's findings revolved around methodology and measurement However a wave of subsequent studies by different authors spanning different time periods sectors and even countries generally confirmed Birch's original findings for most developed countries and in most time periods small business has provided most of the job creation Economics Should Be Done David C. Colander, Huei-chun Su, 2018-01-26 David Colander has been writing about economic methodology for over 30 years but he goes out of his way to emphasize that he does not see himself as a methodologist His pragmatic methodology is applicable to what economists are doing and attempts to answer questions that all economists face as they go about their work The articles collected in this volume are divided with the first part providing a framework underlying Colander's methodology and introducing Colander's methodology for economic policy within that framework Part two presents Colander's view on the methodology for microeconomics while part three looks at Colander's methodology for Steal This Idea M. Perelman, 2016-09-27 This book macroeconomics The book closes with discussions of broader issues describes how corporate powers have erected a rapacious system of intellectual property rights to confiscate the benefits of creativity in science and culture This legal system threatens to derail both economic and scientific progress while disrupting society and threatening personal freedom Perelman argues that the natural outcome of this system is a world of excessive litigation intrusive violations of privacy the destruction system of higher education interference with scientific research and a lopsided distribution of income Regression Models for Categorical and Limited Dependent Variables J. Scott Long, 1997-01-09 THE APPROACH J Scott Long's approach is one that I highly commend There is a decided emphasis on the application and interpretation of the specific statistical techniques Long works from the premise that the major difficulty with

the analysis of limited and categorical dependent variables LCDVs is the complexity of interpreting nonlinear models and he provides tools for interpretation that can be widely applied across the different techniques Robert L Kaufman Sociology Ohio State University A thorough and comprehensive introduction to analyzing categorical and limited dependent variables from a traditional regression perspective that provides unusually clear discussions concerning estimation identification and the multiplicity of models available to the researcher to analyze such data Scott Hershberger Psychology University of Kansas THE ORGANIZATION The thing that impresses me the most about this book is how organized it is The chapters are in excellent logical sequence. There is a useful repetition of important concepts e.g. estimation hypothesis testing from chapter to chapter J Scott Long has done a terrific job of organizing like things from disparate literatures such as the scaler measures of fit in Chapter 4 Herbert L Smith Sociology University of Pennsylvania A major strength of the book is the way that it is organized The chapter about each technique is written in a highly organized and parallel format First the statistical basis and assumptions for the particular model are developed then estimation issues are considered then issues of testing and interpretation are considered then variations and extensions are explored Robert L Kaufman Sociology Ohio State University FOR THE COURSE I have been teaching a course on categorical data analysis to sociology graduate students for close to 20 years but I have never found a book with which I was happy I Scott Long s book on the other hand is nearly ideal for my objectives and preferences and I expect that many other social scientists will feel the same way I will definitely adopt it the next time I teach the course It deals with the right topics in the most desirable sequence and it is clearly written Paul D Allison Sociology University of Pennsylvania Class tested at two major universities and written by an award winning teacher J Scott Long s book gives readers unified treatment of the most useful models for categorical and limited dependent variables CLDVs Throughout the book the links among models are made explicit and common methods of derivation interpretation and testing are applied In addition Long explains how models relate to linear regression models whenever possible In order for the reader to see how these models can be applied Long illustrates each model with data from a variety of applications ranging from attitudes toward working mothers to scientific productivity The book begins with a review of the linear regression model and an introduction to maximum likelihood estimation. It then covers the logit and probit models for binary outcomes providing details on each of the ways in which these models can be interpreted reviews standard statistical tests associated with maximum likelihood estimation and considers a variety of measures for assessing the fit of a model Long extends the binary logit and probit models to ordered outcomes presents the multinomial and conditioned logit models for nominal outcomes and considers models with censored and truncated dependent variables with a focus on the tobit model He also describes models for sample selection bias and presents models for count outcomes by beginning with the Poisson regression model and showing how this model leads to the negative binomial model and zero inflated count models He concludes by comparing and contrasting the models from earlier chapters and discussing the links between these models and

models not discussed in the book such as loglinear and event history models Helpful exercises are included in the book with brief answers included in the appendix so that readers can practice the techniques as they read about them
