Studies In Quaternary Entomology An Inordinate Fondness For Insects:

Studies in Quaternary Entomology A. C. Ashworth, P. C. Buckland, Dr Jonathan P. Sadler, 1998-07-01 This volume assembled in honour of the pioneering work of Professor Russell Coope within the field of palaeoentomology consists of 30 contributions almost all of which are by former students of Russell or by scientists greatly influenced by him It is a mark of the important role that palaeoentomology has had to play in recent palaeoenvironmental research as well as of the very wide influence that Russell has had in this field that the contributions are so diverse in scope and application They range in focus from for example the origins of the present and fossil faunas of Greenland the theory of island biogeography and late Quaternary palaeoclimatology based on quantified temperature estimates to the interpretation of synanthropic insect faunas preserved on archaeological sites The geographical scope of the contents of this volume radiates to Antarctica North America several small Atlantic islands Greenland Africa and Europe Most of the contributions consider coleopteran assemblages but there are also articles on Acari Muscidae Chironomidae and Hymenoptera Supplied with the volume at no additional charge is a disk containing a comprehensive bibliography of scientific publications concerning Quaternary insect assemblages One of the articles also introduces a versatile computerised data base named Bugs which provides comprehensive information on numerous insect fossil records as well as on the distributions and ecological preferences of much of the North European beetle fauna

Advances in Quaternary Entomology Scott A. Elias, 2009-08-18 *Advances in Quaternary Entomology* addresses the science of fossil insects by demonstrating their immense contribution to our knowledge of the paleoenvironmental and climatological record of the past 2.6 million years In this comprehensive survey of the field Scott A. Elias recounts development of scholarship reviews the fossil insect record from Quaternary deposits throughout the world and points to rewarding areas for future research The study of Quaternary entomology is becoming an important tool in understanding past environmental changes Most insects are quite specific as to habitat requirements and those in non island environments have undergone almost no evolutionary change in the Quaternary period We therefore can use their modern ecological requirements as a basis for interpreting what past environments must have been like Describes and identifies principal characteristics of fossil insect groups of the Quaternary period Ties Quaternary insect studies to the larger field of paleoecology Offers global coverage of the subject with specific regional examples Illustrates specific methods and procedures for conducting research in Quaternary Entomology Offers unique insight into overlying trends and broader implications of Quaternary climate change based on insect life of the period

The Quaternary Period in the United States A.R. Gillespie, S.C. Porter, B.F. Atwater, 2003-12-17 This book reviews advances in understanding of the past ca two million years of Earth history the Quaternary Period in the United States It begins with sections on ice and water as glaciers permafrost oceans rivers lakes and aquifers Six chapters are devoted to the high latitude Pleistocene ice sheets to mountain glaciations of the western United States and to permafrost studies Other chapters discuss ice age lakes caves sea level

fluctuations and riverine landscapes With a chapter on landscape evolution models the book turns to essays on geologic processes Two chapters discuss soils and their responses to climate and wind blown sediments Two more describe volcanoes and earthquakes and the use of Quaternary geology to understand the hazards they pose The next part of the book is on plants and animals Five chapters consider the Quaternary history of vegetation in the United States Other chapters treat forcing functions and vegetation response at different spatial and temporal scales the role of fire as a catalyst of vegetation change during rapid climate shifts and the use of tree rings in inferring age and past hydroclimatic conditions Three chapters address vertebrate paleontology and the extinctions of large mammals at the end of the last glaciation beetle assemblages and the inferences they permit about past conditions and the peopling of North America A final chapter addresses the numerical modeling of Quaternary climates and the role paleoclimatic studies and climatic modeling has in predicting future response of the Earth's climate system to the changes we have wrought

The Greenland Entomofauna Jens Böcher, N.P. Kristensen (†), Thomas Pape, Lars Vilhelmsen, 2015-05-26 In *The Greenland Entomofauna* an international team of 64 taxonomic specialists provide for the first time a richly illustrated guide to the identification of the 1200 species of Hexapods Insects Arachnids and Myriapods so far known to occur in the country While the composition origin and adaptations of the Greenland fauna has always been a challenge to biogeographers and ecologists ecophysiologicalists the provision of a tool for detailed identification of its constituent species is now particularly timely since global climate change will expectedly have a particularly noticeable impact on biota at high latitudes This obviously renders the feasibility of monitoring distributional range shifts of the principal components of this biota a matter of some urgency Contributors are Achterberg Cornelius van Ahola Matti Bartk Miroslav Behan Pelletier Valerie Bird Jeremy M B g Katrine Brodo Fenja Buhl Peter N Dahl Christine Disney R Henry L Dittmar Katharina Fjellberg Arne Gammelmo ivind Forshage Mattias Gerecke Reinhard Gertsson Carl Axel Haastriter Michael M L Haenni Jean Paul Heie Ole E Heraty John M Hodgson Chris Hodgkinson Ian D Horsfield David Huber John T Jaschoff Matthias Jensen Frank Johanson Kjell A Jussila Reijo Karsholt Ole Krzeminska Ewa Lantsov Vladimir I L ska Pavel Lindegaard Claus Lyneborg Leif Makarova Olga Marusik Yura M Mathis Wayne N Maz nek Libor Michelsen Verner Munk Thorkild Murphy William L Nielsen S ren A Nielsen Tore R Noyes John S Oosterbroek Pjotr Ozerov Andrey L Pape Thomas Pinto John D Pollet Marc Rindal Eirik Roh cek Jindrich Simonsen Thomas J Smith Vincent S S li Geir Star Jaroslav Strassen Richard zur Svensson Bo W Vilhelmsen Lars Vilkamaa Pekka Wilson Michael Zatwarnicki Tadeusz

Reconstructing Quaternary Environments J. John Lowe, Michael Walker, 2014-10-28 This third edition of *Reconstructing Quaternary Environments* has been completely revised and updated to provide a new account of the history and scale of environmental changes during the Quaternary The evidence is extremely diverse ranging from landforms and sediments to fossil assemblages and geochemical data and includes new data from terrestrial marine and ice core records Dating methods are described and evaluated while the principles and practices of Quaternary stratigraphy are also discussed

The volume concludes with a new chapter which considers some of the key questions about the nature causes and consequences of global climatic and environmental change over a range of temporal scales This synthesis builds on the methods and approaches described earlier in the book to show how a number of exciting ideas that have emerged over the last two decades are providing new insights into the operation of the global earth ocean atmosphere system and are now central to many areas of contemporary Quaternary research This comprehensive and dynamic textbook is richly illustrated throughout with full colour figures and photographs The book will be of interest to undergraduates postgraduates and professionals in Earth Science Environmental Science Physical Geography Geology Botany Zoology Ecology Archaeology and Anthropology

The Iceberg in the Mist: Northern Research in Pursuit of a "Little Ice Age" A.E.J. Ogilvie, Trausti Jónsson, 2013-04-17 THE LITTLE ICE AGE LOCAL AND GLOBAL PERSPECTIVES P D JONES and K R BRIFFA Climatic Research Unit University of East Anglia Norwich NR4 7TJ UK This volume of Climatic Change is devoted to the study of the climate of the last 1000 years with a major emphasis on the last few centuries The timespan encompasses what has been referred to as the Little Ice Age Bradley 1992 This term was originally coined by glaciologists with reference to the most recent major glacial advance of the Holocene Bradley and Jones 1993 Although other such advances in different parts of the world may not have been synchronous the term Little Ice Age has

come to be associated with the period of a widespread forward movement of European glaciers between about 14 50 to 1850 as well as with relatively cooler temperatures The issue of whether or not this concept is appropriate is a major theme of many of the papers included in this volume
