Caledonian-Appalachian Orogen of the North Atlantic Region International Geological Correlation Programme. Project 27 - Caledonide Orogen, 1978 The papers published in this volume were prepared as part of one of the 62 projects of the International Geological Correlation Programme IGCP Project 27 The Caledonian Orogen This project is concerned with the great Paleozoic orogenic belt exposed in the lands bordering both sides of the Atlantic Ocean and which forms such a significant feature of the geology of the Appalachian region of Eastern Canada and the United States The papers cover a wide variety of related problems including geological comparisons between Newfoundland and Ireland and between Nova Scotia and Morocco Such comparisons are unquestionably relevant to the elucidation of the significance of the Caledonian orogeny which cannot be attempted from studies within any one country **Progress in Studies of the Lithosphere in Norway** Y. Kristoffersen, 1988 Research papers concentrating on the mechanisms and products of two fundamental processes rifting and continental collision in the Phanerozoic geologic period represented by rocks evolution of the lithosphere in Norway *Ecosystem Dynamics in a Polar Desert*, 1998 Presents information from the primary abiotic forces defining the system and from the present hydrology biogeochemistry and physics of major sites of organic carbon production of the McMurdo Dry Valleys Additionally research on the physical chemical and biological properties of the dry valley soils is included The role of environmental management in long term ecological studies is also addressed The accompanying CDROM provides details and scale to visualize the McMurdo Dry Valleys from an ecosystem perspective *New Developments in the Appalachian-Caledonian-Variscan Orogen* Yvette D. Kuiper, J. Brendan Murphy, R. Damian Nance, Robin A. Strachan, Margaret D. Thompson, 2022-08-01 This volume provides a comprehensive overview of our understanding of the evolution of the Appalachian Caledonian Variscan orogen It takes the reader along a clockwise path around the North Atlantic Ocean from the U S and Canadian Appalachians to the Caledonides of Spitsbergen Scandinavia Scotland and Ireland and thence south to the Variscides of Morocco *Regional Trends in the Geology of the Appalachian-Caledonian-Hercynian-Mauritanide Orogen* P.E. Schenk, 2012-12-06 The classical Appalachian Caledonian Hercynian and Mauritanide orogens are now only segments of a once continuous Paleozoic mountain belt which has been fragmented during Mesozoic Cenozoic formation of the North Atlantic Ocean These segments are major parts of the countries surrounding the North Atlantic most of which are members of NATO The aim of this NATO conference was to evaluate these fragments in terms of their pre Mesozoic positions and to attempt a synthesis of their geologic evolution on an international and orogen wide scale Geologists who have studied these scattered remnants have been separated by both geography and discipline Orogen wide syntheses have been attempted in the past by individuals who are specialists not only in discipline but also in geography therefore these attempts have not been satisfactory to everyone This conference brought together the foremost specialists in different disciplines from each country They attempted to teach other specialists not only in their own fields but in other disciplines about regional variations and

particular problems The resulting international cross fertilization both within and between specialties enriched individual workers and helped to provide a multi disciplinary overview of the orogen

New Perspectives on the Caledonides of Scandinavia and Related Areas F. Corfu, D. Gasser, D. M. Chew, 2014-04-14 The Caledonides are a major orogenic belt that stretches from the Arctic through Scandinavia East Greenland Britain and Ireland into the Atlantic coast of North America Following the break up of Rodinia the Caledonides formed in the Palaeozoic by the drifting of various continents and their eventual aggregation in the Silurian and Devonian The orogen subsequently fragmented during the opening of the Atlantic Ocean This volume brings together 25 papers presenting the results of modern research that investigates the orogenic processes and the provenance of specific components of the belt The contributions reflect different lines of research linking traditional field studies with modern analytical techniques In addition three overview papers summarize the main features of the belts in Scandinavia Svalbard East Greenland Britain and Ireland highlighting the advances made since the last major synthesis of the Scandinavian Caledonides 30 years ago and discussing important open questions *Research papers*, 1975
