Studies in Inductive Probability and Rational Expectation Theo A.F. Kuipers, 2012-12-06 3 in philosophy and therefore in metaphilosophy cannot be based on rules that avoid spending time on pseudo problems Of course this implies that if one succeeds in demonstrating convincingly the pseudo character of a problem by giving its solution the time spent on it need not be seen as wasted We conclude this section with a brief statement of the criteria for concept explication as they have been formulated in several places by Carnap Hempel and Stegmüller Hempel's account 13J Chapter 1 is still very adequate for a detailed introduction The process of explication starts with the identification of one or more vague and perhaps ambiguous concepts the so called explicanda Next one tries to disentangle the ambiguities This however need not be possible at once Ultimately the explicanda are to be replaced not necessarily one by one by certain counterparts the so called explicata which have to conform to four requirements They have to be as precise as possible and as simple as possible In addition they have to be useful in the sense that they give rise to the formulation of theories and the solution of problems The three requirements of preciseness simplicity and usefulness have of course to be pursued in all concept formation

Studies in Inductive Logic and Probability Rudolf Carnap, Richard C. Jeffrey, 1980-01-01 A basic system of inductive logic An axiomatic foundation for the logic of inductive generalization A survey of inductive systems On the condition of partial exchangeability Representation theorems of the de Finetti type De Finetti's generalizations of exchangeability The structure of probabilities defined on first order languages A subjectivist's guide to objective chance Studies in Inductive Logic and Probability, Volume II Richard C. Jeffrey, 2023-11-15 This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1980 **Induction and Deduction in the Sciences** Friedrich Stadler, 2004-04-30 The articles in this volume deal with the main inferential methods that can be applied to different kinds of experimental evidence These contributions accompanied with critical comments by renowned scholars in the field of philosophy of science aim at removing the traditional opposition between inductivists and deductivists They explore the different methods of explanation and justification in the sciences in different contexts and with different objectives The volume contains contributions on methods of the sciences especially on induction deduction abduction laws probability and explanation ranging from logic mathematics natural to the social sciences They present a highly topical pluralist re-evaluation of methodological and foundational procedures and reasoning e.g. focusing in Bayesianism and Artificial Intelligence They document the second international conference in Vienna on Induction and Deduction in the Sciences as part of the Scientific Network on Historical and Contemporary Perspectives of Philosophy of Science in Europe funded by the European Science Foundation ESF Confirmation, Empirical Progress, and Truth

Nomic Truth Approximation Revisited Theo A. F. Kuipers, 2019-03-05 This monograph presents new ideas in nomic truth approximation It features original and revised papers from a formal philosopher of science who has studied the concept for more than 35 years Over the course of time the author's initial ideas evolved He discovered a way to generalize his first theory of nomic truth approximation viz by dropping an unnecessarily strong assumption In particular he first believed to have to assume that theories were maximally specific in the sense that they did not only exclude certain conceptual possibilities but also that all non excluded possibilities were in fact claimed to be nomically possible Now he argues that the exclusion claim alone or for that matter the inclusion claim alone is sufficient to motivate the formal definition of being closer to the nomic truth The papers collected here detail this generalized view of nomic truthlikeness or verisimilitude Besides this the book presents in adapted form the relation with several other topics such as domain revision aesthetic progress abduction inference to the best explanation pragmatic aspects probabilistic methods belief revision and epistemological positions notably constructive realism Overall the volume presents profound insight into nomic truth approximation This idea seeks to determine how one theory can be closer to or more similar to the truth about what is nomically e g physically chemically biologically possible than another theory As a result it represents the ultimate goal of theory oriented empirical science Theo Kuipers is the author of *Studies in Inductive Probability and Rational Expectation* 1978 *From Instrumentalism to Constructive Realism* 2000 and *Structures in Science* 2001 He is the volume editor of the *Handbook on General Philosophy of Science* 2007 In 2005 there appeared two volumes of *Essays in Debate with Theo Kuipers* entitled *Confirmation Empirical Progress and Truth Approximation* and *Cognitive Structures in Scientific Inquiry*
