Taking Learning To Task:

Taking Learning to Task Jane Vella, 2000-07-25 Reading this wonderful book is like having Jane Vella at your side. She gives us the courage to risk changing our established habits of teaching. Clifford Baden, director of programs for professional education, Harvard University. By marrying theory and practice, Vella has shown how to design learning that takes hold of the learner's mind, heart, and muscles. Jack McCall, professor, Principals Executive Program, University of North Carolina, Chapel Hill. You'll feel as though you've found the keys to creating profound and powerfully effective learning experiences. Anyone responsible for engaging a group of adults in learning will find this book invaluable. Rod Brooks, vice president for administration, EXPLORIS. Known for her work in popular education and her worldwide teaching experience, Jane Vella has significantly changed the way we view adult learning. In her three bestselling books, *Learning to Listen*, *Learning to Teach*, *Training Through Dialogue*, and *How Do They Know They Know*, she writes with one basic assumption: that learning is most effective when teachers involve their students in the learning process. In *Taking Learning to Task*, Vella shifts the spotlight from teaching tasks to learning tasks. Unlike traditional teaching methods, learning tasks are open questions leading to open dialogue between teacher and learner. To illustrate this unique approach, Vella provides seven steps to planning learning-centered courses, four types of learning tasks, a checklist of principles and practices, critical questions for instructional design, key components for evaluation, and other tools. She also shares real-world examples of successful learning programs, including online and distance learning courses. *Taking Learning to Task* is a hands-on, practical guide to designing effective learning tasks for diverse learners and diverse content. Teachers, trainers, and all types of instructors will find a wealth of advice for refining their day-to-day practice. *A Practical Approach to Supporting Science and Engineering Students with*

Self-Regulated Learning Erin E. Peters-Burton, 2023-11-16 Science and engineering practices tend to be more difficult to teach and monitor for student progress than content knowledge because practices are skill-based. This book presents tangible ways for teacher educators and teachers to design learning environments that involve student goal setting, monitoring, and reflection on their performance of science and engineering practices. It models ways teachers can support effective learning behaviors and monitor student progress in science and engineering practices. It also presents practical ways to set up preservice teacher instruction and inservice teacher professional development that address both self-regulated learning and science and engineering practices. Educational research designs are presented from qualitative, quantitative, and mixed methods traditions that investigate student and teacher engagement with science and engineering practices through self-regulated learning. **On Teaching and Learning** Jane Vella, 2014-07-17 *On Teaching and Learning* takes the ideas explored in renowned educator Jane Vella's best-selling book *Learning to Listen*, *Learning to Teach* to the next level and explores how dialogue education has been applied in educational settings around the world. Throughout the book, she shows how to put the principles and practices of dialogue education into action and uses illustrative stories and examples from her

extensive travels Dialogue education values inquiry integrity and commitment to equity values that are also central to democracy Learners are treated as beings worthy of respect recognized for the knowledge and experience they bring to the learning experience Dialogue education emphasizes the importance of safety and belonging It is an approach that welcomes one's certainties and one's questions

Metacognition and Learning Technologies Roger Azevedo, Vincent Aleven, 2013-04-23 Education in today's technologically advanced environments makes complex cognitive demands on students pre learning during and post learning. Not surprisingly these analytical learning processes metacognitive processes have become an important focus of study as new learning technologies are assessed for effectiveness in this area. Rich in theoretical models and empirical data the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self regulated learning SRL examining theories and models of metacognition empirical issues in the study of SRL and the expanding role of educational technologies in helping students learn. Innovations in multimedia hypermedia microworlds and other platforms are detailed across the domains so that readers in diverse fields can evaluate the theories data collection methods and conclusions. And for the frontline instructor contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered the Handbook Explains how the technology fosters students metacognitive or self regulated learning. Identifies features designed to study or support metacognitive SRL behaviors. Reviews how its specific theory or model addresses learners metacognitive SRL processes. Provides detailed findings on its effectiveness toward learning. Discusses its implications for the design of metacognitive tools. Examines any theoretical instructional or other challenges. These leading edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education classroom teachers human resource researchers and industrial and other instructors.

Writing as a Learning Tool Päivi Tynjälä, L. Mason, K. Lonka, 2012-12-06 In a brief summary the debate concerning the nature of writing processes is about whether the essential characteristic of expertise in writing is a matter of mastering problem solving strategies. In this respect the role of social and interactive factors such as writers familiarity with the particular genre in which they are writing and their relationship with the discourse community in which they are participating have been pointed out e.g. Nystrand 1989. According to the socio interactive approach which refers to Vygotsky's theory the composition process is a dialogue between the writer and the reader made possible by socially shared knowledge. The meaning of a text is a social construct that is negotiated between the reader and the writer through the medium of the text. The importance of motivational aspects has also been highlighted by two main lines of research studies of the relationship between writing and self efficacy e.g. Pajares Benton Corkill Sharp Downey Khramtsova 1995 Hidi McLaren 1990 1991. Self efficacy in this context individuals beliefs

about their ability to produce certain types of texts have been found to be predictive of writing skills strategy use and writing performance
