The Haemostatic Mechanism In Man And Other Animals:

The Haemostatic Mechanism in Man and Other Animals Gwyn Macfarlane,1970 Hemostasis and Animal Venoms Hubert Pirkle,1988-03-14 First published in 1988 Routledge is an imprint of Taylor Francis an informa company

Current Catalog National Library of Medicine (U.S.),1979 First multi year cumulation covers six years 1965 70 The Physiology of Hemostasis Derek. Ogston,2012-12-06 The current widespread interest in the hemostatic mechanism stems largely from the probability that its inappropriate function may lead to thrombosis but also for its relevance to the causation and manage ment of bleeding disorders Our understanding of the pathological events leading to thrombus formation or abnormal bleeding depends on knowledge of the basic physiology of the hemostatic system A number of excellent multiauthor texts are available on the general area of hemostasis and thrombosis and many symposia proceedings on specific topics in hemostasis have been published The present volume aims to cover the normal function of hemostasis and ex plicitly excludes consideration of disease states and therapy In addition it is concerned with human hemostasis only although reference is made to studies on other mammalian species when the information supplements that available on man The book is divided broadly into two sections The first covers the current knowledge of the principal components contributing to the hemostatic process the second examines the changes in these com ponents induced by physiological events and details an accumula tion of information not previously brought together in a single text An introductory chapter intended for the non specialist outlines the whole hemostatic process and provides an orientation for the later detailed information on individual components National Library of Medicine Current Catalog National Library of Medicine (U.S.),1971 Nonhuman Primates and Medical Research Geoffrey H. Bourne,2014-05-10 Nonhuman Primates and Medical Research focuses on the contributions of nonhuman primates to biomedical research The selection first elaborates on monkeys and yellow fever cell cultures and tuberculosis and bacterial infection Discussions focus on bacterial diseases tuberculosis radiobiology antibody formation and pharmacologic studies cell culture media and methods the rhesus monkey and early history of yellow fever research and monkeys and yellow fever in the future The text then elaborates on virus research models for investigation in parasitology and primates as organ donors in transplanta tion studies in man The manuscript examines the importance of monkeys for the study of malignant tumors in man use of primates in cardiovascular research and humanlike diseases in anthropoid apes Topics include etiology of humanlike disease in anthropoid apes atherosclerosis historical aspects of primate research selection of a suitable primate and preeclampsia The text also ponders on primate studies and human evolution and mental retardation The selection is a valuable reference for researchers interested in the contributions of nonhuman primates to biomedical research **Animal Physiology** Knut Schmidt-Nielsen,1997-06-09 How do dolphins catch fish in murky water Why do moths drink from puddles How do birds eggs breathe How do animals work In this revised and updated edition of the acclaimed text Animal Physiology the answers are revealed In clear and stimulating style Knut Schmidt Nielsen

introduces and develops the fundamental principles of animal physiology according to major environmental features oxygen food and energy temperature and water The structure of the book is unchanged from the previous edition but every chapter has been updated to take into account recent developments with numerous new references and figures Animal Physiology is suitable as a text for undergraduate and beginning graduate courses in physiology As with previous editions students teachers as well as researchers will find this book a valuable and enjoyable companion to course work and research

Comparative Mammalian Haematology C. M. Hawkey, 2017-09-09 *Comparative Mammalian Haematology Cellular Components and Blood Coagulation of Captive Wild Mammals* presents a critical review of the hematology of the vertebrates It discusses the characteristics of blood components of primates the features of the red cells of carnivores and the different species of canine The book covers the blood components of cats monkeys bears mouse horse rhinoceros pig llama boars camels and deer The book can provide useful information to hematologists biologists students and researchers **Animal Models in Radiotracer Design** Richard M. Lambrecht, William C. Eckelman, 2012-12-06 The editors have asked me to write this foreword probably for two reasons First I have spent 35 years trying to develop radiolabeled compounds that would help diagnose and treat disease I and the people from my laboratory have been much involved with developing Na I for the diagnosis and treatment of hyperthyroidism and well differentiated thyroid cancer Second I was a participant throughout the entire symposium upon which this book is based Our latest ³¹¹I labeled compound ¹³¹I metaiodobenzylguanidine took us 13 years to develop It has succeeded in diagnosing and treating adrenergic tumors ³¹ under circumstances where Na ¹ would have failed for the diagnosis and treatment of thyroid cancer I therefore hope that more scientists will be attracted to this field This book is written by intelligent experienced investigators who are knowledgeable It is a must for anyone new in the field For the experienced I would like to remind you that I attended the entire symposium the breadth and timeliness of the update has helped us to redirect some of our current efforts into more scientifically productive channels William H Beierwaltes M D Human Blood Coagulation, Haemostasis and Thrombosis Rosemary Biggs, 1972 *Radiolabeled Cellular Blood Elements* M. L. Thakur, 2013-03-13 Preparing manuscripts with figures and tables for camera reproduction was a formidable task Care has been taken for consistency and typographic accuracy However I make no claim that no errors exist in this volume I hope however that the reader will understand and ignore any error and find this compendious volume useful for numerous biologic studies physiologic explorations and clinical applications of radiolabeled cellular blood elements in years to come M L Thakur Editor and the ASI Director ACKNOWLEDGEMENTS Dr Max Hardeman of the University of Amsterdam and Dr Michael Ezekowitz of Yale University served as the codirectors of the Advanced Study Institute ASI Dr Hardeman spent countless hours and contributed to the scientific program took care of mailings in Europe organized transportation in Italy and communicated with the hotel management on numerous occasions I cannot thank him enough Dr Ezekowitz collected some manuscripts and corrected a few I am grateful to him I take this opportunity once again

to thank all the guests who despite their busy schedules and time constraints accepted my invitation and made valuable contributions to the ASI. I am also grateful to all participants who were so friendly and were primary resources for many lively discussions. They made the ASI professionally beneficial and socially enjoyable.

Natural History of Vampire Bats Arthur M. Greenhall, 2018-05-04 A major problem with vampire bats is that whatever information exists is scattered throughout the literature or is not recorded. There are some excellent books on the ecology and biology of bats with very little on vampire bats. This volume fills that gap to provide an in-depth presentation of these unique animals.

The Significance of Zochromes A.E. Needham, 2012-12-06 As the title indicates the theme of this book is the functions of biochromes in animals. Recent works on zochromes such as those of D. L. Fox 1953, H. M. Fox and VEVERS 1960 and VUILLAUME 1969 have been concerned primarily with the chemical nature and the taxonomic distribution of these materials and although function has been considered where relevant this has not been the centre of interest and certainly not the basis for the arrangement of the subject matter. Functional significance is a profitable focus of interest since it is the one theme which can make biochromatology a discrete and integral subject and because it is the main interest in all biological fields. At present chromatology seems to be a particularly schizoid subject since it is clear that in metabolic functions biochromes are acting in a chemical capacity whereas integumental pigments function mainly biophysically in neurological and behavioural contexts. It is profitable to attempt an integration by studying the functions of as many chromes as possible from all aspects.

Integument, Respiration and Circulation G. A. Kerkut, 2013-10-22 This volume is primarily devoted to the analysis of the integument, epidermis, cuticle, the fat body, the connective tissues, the circulatory and respiratory systems. It discusses the organization and functioning of the insect systems implicated in growth, intermediary metabolism, homeostasis and defence mechanisms. Much of the volume is devoted to anatomical and structural developments which appear as introductions to corresponding biochemical and physiological aspects. Many diagrams, drawings and photographs accompany the text throughout. Altogether this volume presents a clear and up-to-date account of the most recent and important discoveries in the fields and shows the extent of progress which is expected in the near future.

Evolution of Immune Reactions Petr Sima, Vaclav Vetvicka, 1990-08-27 This book on phylogeny and immunity reconstructs the history and evolutionary pathways of immunity among the various forms of life. The authors argue that the immunity could have evolved different adequately successful patterns in the animal sub-regnum which are strictly determined by the morpho-physiological possibilities of the animals. They state that the vertebrate type of immunity evolved only in the chordate branch. The publication devotes special attention to the arthropods and molluscs as they have attracted more investigative efforts than any other invertebrate taxa. The authors selected Agnatha, Chondrichthyes and Osteichthyes from the vertebrate taxa in order

to show where and how the morphofunctional basis of the truly adaptive immunity of the endothermic tetrapods gradually evolved Each chapter gives the description of the origin and interrelationships of the representatives of the taxon in question Also given are the main biological morphological non morphological and immune attributes Emphasized throughout the book is the central idea that immunological reactions are a part of the overall biological phenomena and should be studied only from this aspect The authors express that the fields of comparative and evolutionary immunology will provide inspiration for further investigations in biomedicine in the near future Symposia of the Zoological Society of London ,1960

Antiplatelet Agents Paolo Gresele,Gustav V. R Born,Carlo Patrono,Clive P. Page,2012-08-23 Antiplatelet therapy is the cornerstone of treatment of ischemic cardiovascular disease and over the last few years spectacular advancements in this field have been recorded This is the first comprehensive handbook entirely dedicated to all the aspects of antiplatelet therapy The book is divided into three main sections pathophysiology pharmacology and therapy for a total of 23 chapters A large group of leading experts from different European countries and from the USA both from academia and industry have contributed to the book Besides a detailed overview on the pharmacology and clinical applications of all the currently used or of the novel antiplatelet agents innovative approaches e g intracellular signalling as an antiplatelet target small RNAs as platelet therapeutics etc or unconventional aspects e g pharmacologic modulation of the inflammatory action of platelets are also treated The book is oriented to both basic investigators and to clinicians involved with research on platelet inhibition or with the clinical use of antiplatelet therapies PATHOLOGY OF DOMESTIC ANIMALS 3E K.V.F.
