Soviet Academy Of Sciences The Communi:

Scientific Communication Across the Iron Curtain Christopher D. Hollings, 2015-12-12 This monograph provides a concise introduction to the tangled issues of communication between Russian and Western scientists during the Cold War. It details the extent to which mid twentieth century researchers and practitioners were able to communicate with their counterparts on the opposite side of the Iron Curtain. Drawing upon evidence from a range of disciplines a decade by decade account is first given of the varying levels of contact that existed via private correspondence and conference attendance. Next the book examines the exchange of publications and the availability of one side's work in the libraries of the other. It then goes on to compare general language abilities on opposite sides of the Iron Curtain with comments on efforts in the West to learn Russian and the systematic translation of Russian work. In the end author Christopher Hollings argues that physical accessibility was generally good in both directions but that Western scientists were afflicted by greater linguistic difficulties than their Soviet counterparts whose major problems were bureaucratic in nature. This volume will be of interest to historians of Cold War science particularly those who study communications and language issues. In addition it will be an ideal starting point for anyone looking to know more about this fascinating area. *Biology Bulletin of the Academy of Sciences of the USSR. Akademiia nauk SSSR.*, 1988

Soviet Scientists and the State Peter Kneen, 1984-01-01 Soviet Scientists and the State examines the constraints placed upon the natural scientist in the Soviet Union. The book brings into sharp relief the social and economic consequences arising from the highly centralized character of Communist Party rule. Because conditions regarded as essential for effective scientific research conflict with the form of political control prevailing in the Soviet Union the Soviet scientists working environment provides a fruitful context for assessing the methods adopted by the Communist Party. This study is an excellent base from which to explore some important sources of change in contemporary Soviet politics. The book is also a survey of the present state of natural science in the U S S R. Topics of concern range from the scientists background and social characteristics institutions status and leadership to their social relations and effectiveness. The relationship of the Communist Party to the scientists is examined in detail.

Scientific Communication and National Security National Academy of Engineering, National Academy of Sciences, Policy and Global Affairs, Institute of Medicine, Committee on Science, Engineering, and Public Policy, Panel on Scientific Communication and National Security, 1982-02-01 The military political and economic preeminence of the United States during the post World War II era is based to a substantial degree on its superior rate of achievement in science and technology as well as on its capacity to translate these achievements into products and processes that contribute to economic prosperity and the national defense. The success of the U S scientific enterprise has been facilitated by many factors important among them the opportunity for American scientists and engineers to pursue their research and to communicate with each other in a free and open environment. During the last two administrations however concern has arisen that the characteristically open U S scientific

community has served as one of the channels through which critical information and know how are flowing to the Soviet Union and to other potential adversary countries openness in science is thus perceived to present short term national security risks in addition to its longer term national security benefits in improved U S military technology The Panel on Scientific Communication and National Security was asked to examine the various aspects of the application of controls to scientific communication and to suggest how to balance competing national objectives so as to best serve the general welfare The Panel held three two day meetings in Washington at which it was briefed by representatives of the departments of Defense State and Commerce and by representatives of the intelligence community including the Central Intelligence Agency the Federal Bureau of Investigation the Defense Intelligence Agency and the National Security Agency The Panel also heard presentations by members of the research community and by university representatives In addition to these briefings the Rand Corporation prepared an independent analysis of the transfer of sensitive technology from the United States to the Soviet Union To determine the views of scientists and administrators at major research universities the Panel asked a group of faculty members and administrative officials at Cornell University to prepare a paper incorporating their own views and those of counterparts at other universities The main thrust of the Panel s findings is completely reflected in this document However the Panel has also produced a classified version of the subpanel report based on the secret intelligence information it was given this statement is available at the Academy to those with the appropriate security clearance
