This essay collection comes from an economist and so is not, strictly speaking, a philosophy book. But the author is an outstanding economist, and *Strategies of Commitment* is a very philosophical book. All pieces in it are remarkably lucid and truly engaging; each contains an original idea, and some read as series of insights; many offer examples of the kind that works effectively in a variety of settings – a conference talk, a journal article, a university class or even at the dinner table. The book will be of interest to philosophers of economics, rational choice theory, game theory, ethics, political theory and environmental philosophy.

Strategies of Commitment contains a total of nineteen essays grouped in eight chapters. Two chapters will serve as focal points of this discussion: the opening chapter which gives title to the collection and section number three under the heading, “Commitment as Self-Command.”

Associations from one group have their origin in a Kantian understanding of commitment traceable back to Plato and recently revived by neo-Kantians. On that understanding, to make a commitment is to bind oneself with reasons, reasons to pursue particular courses of action and avoid others. If one fails a commitment, on this view, one fails as a moral being and possibly, echoing more recent versions of the account, scathes one’s own practical identity. The other chain of associations begins with Hobbes’s idea that commitments should be made and kept for self-interested reasons. Keeping a commitment is in one’s own interest, on Hobbes’s reckoning, just in case a strong

The Evolved Apprentice Kim Sterelny, 2014-08-29 A new theory of the evolution of human cognition and human social life that emphasizes the role of information sharing across generations Over the last three million years or so our lineage has diverged sharply from those of our great ape relatives Change has been rapid in evolutionary terms and pervasive Morphology life history social life sexual behavior and foraging patterns have all shifted sharply away from those of the other great apes In The Evolved Apprentice Kim Sterelny argues that the divergence stems from the fact that humans gradually came to enrich the learning environment of the next generation Humans came to cooperate in sharing information and to cooperate ecologically and reproductively as well and these changes initiated positive feedback loops that drove us further from other great apes Sterelny develops a new theory of the evolution of human cognition and human social life that emphasizes the gradual evolution of information sharing practices across generations and how these practices transformed human minds and social lives Sterelny proposes that humans developed a new form of ecological interaction with their environment cooperative foraging The ability to cope with the immense variety of human ancestral environments and social forms he argues depended not just on adapted minds but also on adapted developmental environments

C. Pauly,2025-08-15 The Art of Coercion presents a fresh explanation for the success and failure of coercive demands in international politics Strong states are surprisingly bad at coercion History shows they prevail only a third of the time Reid B C Pauly argues that coercion often fails because targets fear punishment even if they comply In this damned if you do damned if you don t scenario targets have little reason to obey Pauly illustrates this logic in nuclear counterproliferation efforts with South Africa Iraq Libya and Iran He shows that coercers face an assurance dilemma When threats are more credible assurances not to punish are less so But without credible assurances targets may defy threats bracing for seemingly inevitable punishment For coercion to work as such coercers must not only make targets believe that they will be punished if they do not comply but also that they will not be if they do Packed with insights for any foreign policy challenge involving coercive strategies The Art of Coercion crucially corrects assumptions that tougher threats alone achieve results *India, Climate Change, and The Global Commons* A.
