Strategies That Influence Cost Containment In Animal Research Facilities:

Strategies That Influence Cost Containment in Animal Research Facilities National Research Council, Institute for Laboratory Animal Research, Committee on Cost of and Payment for Animal Research, 2001-01-18 Care and use of animals in research are expensive prompting efforts to contain or reduce costs Components of those costs are personnel regulatory compliance veterinary medical care and laboratory animal management equipment and procedures Many efforts have been made to control and reduce personnel costs the largest contributing factor to cost through better facility and equipment design more efficient use of personnel and automation of many routine operations However there has been no comprehensive recent analysis of the various cost components or examination of the strategies that have been proven or are purported to decrease the cost of animal facility operation Strategies that Influence Cost Containment in Animal Research Facilities examines the current interpretation of governmental policy Office of Management and Budget Circular A 21 concerning institutional reimbursement for overhead costs of an animal research facility and describes methods for economically operating an animal research facility This report develops recommendations by which federal auditors and research institutions can establish what cost components of research animal facilities should be charged to institutions indirect cost pool and what animal research facility cost components should be included in the per diem charges to investigators and assesses the financial and scientific ramifications that these criteria would have among federally funded institutions Further the report determines the cost components of laboratory animal care and use in biomedical research and assesses and recommends methods of cost containment for institutions maintaining animals for biomedical research **Management of**

Handbook of Laboratory Animal Science Jann Hau, Steven J. Schapiro, 2021-05-17 Building upon the success of previous editions of the bestselling *Handbook of Laboratory Animal Science* first published in 1994 this latest revision combines all three volumes in one definitive guide It covers the essential principles and practices of Laboratory Animal Science as well as selected animal models in scientific disciplines where much progress has been made in recent years Each individual chapter focuses on an important subdiscipline of laboratory animal science and the chapters can be read and used as stand alone texts with only limited necessity to consult other chapters for information With new contributors at the forefront of their fields the book reflects the scientific and technological advances of the past decade It also responds to advances in our understanding of animal behavior emphasizing the importance of implementing the three Rs replacing live animals with alternative methods reducing the number of animals used and refining techniques to minimize animal discomfort This fourth edition will be useful all over the world as a textbook for laboratory animal science courses for postgraduate and undergraduate students and as a handbook for scientists who work with animals in their research for university veterinarians and for other specialists in laboratory animal science

Animal Models for Assessing Countermeasures to

Bioterrorism Agents National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Committee on Animal Models for Assessing Countermeasures to Bioterrorism Agents, 2012-01-09 The Transformational Medical Technologies TMT has been a unique component of the U S Department of Defense DoD medical biodefense efforts since 2006 Its mission is to advance countermeasure research and development in support of the broader goal of the DoD to protect warfighters from emerging infectious diseases and future genetically engineered biological weapons The TMT using advanced science and technology approaches focused on the development of roadspectrum countermeasures that target common host and pathogen pathways or enhance the host s immune response Many of these

pathogens are lethal or cause such debilitating diseases in humans that it is ethically inappropriate to test the efficacy of these countermeasures in human volunteers In lieu of human participants these products may be tested in animals and approved for human use under the provisions of the Food and Drug Administration FDA s 2002 Animal Rule The reliance on animal models for the development and licensure of medical countermeasures against biothreats is challenging for a number of reasons The ad hoc Committee on Animal Models for Assessing Countermeasures to Bioterrorism Agents prepared a consensus report that would address the challenges stemming from developing and testing medical countermeasures against biothreat agents in animal models Animal Models for Assessing Countermeasures to Bioterrorism Agents evaluates how well the existing TMT employed or candidate animal models reflect the pathophysiology clinical picture and treatment of human disease as related to the agents of interest The report addresses the process and or feasibility of developing new animal models for critical biodefense research placing emphasis on the need for a robust and expeditious validation process in terms of the FDA s Animal Rule The report also evaluates alternatives to the use of animal models based on the premise of the Three Rs Recognition and Alleviation of Pain in Laboratory Animals National Research Council,Division on Earth and Life Studies,Institute for Laboratory Animal Research,Committee on Recognition and Alleviation of Pain in Laboratory Animals,2010-01-14 The use of animals in research adheres to scientific and ethical principles that promote humane care and practice Scientific advances in our understanding of animal physiology and behavior often require theories to be revised and standards of practice to be updated to improve laboratory animal welfare Recognition and Alleviation of Pain in Laboratory Animals the second of two reports revising the 1992 publication Recognition and Alleviation of Pain and Distress in Laboratory Animals from the Institute for Laboratory Animal Research ILAR focuses on pain experienced by animals used in research This book aims to educate laboratory animal veterinarians students researchers and investigators Institutional Animal Care and Use Committee members and animal care staff and animal welfare officers on the current scientific and ethical issues associated with pain in laboratory animals It evaluates pertinent scientific literature to generate practical and pragmatic guidelines for recognizing and alleviating pain in laboratory animals focusing specifically on the following areas physiology of pain in commonly used laboratory species pharmacologic and non pharmacologic principles to control pain identification of humane endpoints and principles for minimizing pain associated with experimental procedures Finally the report identifies areas in which further scientific investigation is needed to improve laboratory animal welfare

Recognition and Alleviation of Distress in Laboratory Animals National Research Council,Division on Earth and Life Studies,Institute for Laboratory Animal Research,Committee on Recognition and Alleviation of Distress in Laboratory Animals,2008-04-10 Scientific advances in our understanding of animal physiology and behavior often require theories to be revised and standards of practice to be updated to improve laboratory animal welfare This new book from the Institute for Laboratory Animal Research ILAR at the National Research Council Recognition and Alleviation of Distress in Laboratory

Animals focuses on the stress and distress which is experienced by animals when used in laboratory research This book aims to educate laboratory animal veterinarians students researchers and investigators animal care staff as well as animal welfare officers on the current scientific and ethical issues associated with stress and distress in laboratory animals It evaluates pertinent scientific literature to generate practical and pragmatic guidelines Recognition and Alleviation of Distress in Laboratory Animals focuses specifically on the scientific understanding of the causes and the functions of stress and distress the transformation of stress to distress and the identification of principles for the recognition and alleviation of distress This book discusses the role of humane endpoints in situations of distress and principles for the minimization of distress in laboratory animals It also identifies areas in which further scientific investigation is needed to improve laboratory animal welfare in order to adhere to scientific and ethical principles that promote humane care and practice

Scientific and Humane Issues in the Use of Random Source Dogs and Cats in Research National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Committee on Scientific and Humane

Issues in the Use of Random Source Dogs and Cats in Research,2009-12-30 Scientific and Humane Issues in the Use of Random Source Dogs and Cats in Research examines the value of random source animals in biomedical research and the role of Class B dealers who acquire and resell live dogs and cats to research institutions Findings include that while some random source dogs and cats may be necessary and desirable for National Institutes of Health NIH funded research there is no clear need to obtain those animals from Class B dealers Several options for random source animal acquisition already exist and additional options are recommended which would further ensure the welfare of these animals and foster a positive public image for NIH While the scientific community has recognized and responded to concerns for humane treatment of animals in research government oversight has thus far been unable to fully enforce the Animal Welfare Act in regard to Class B dealers of live animals Although the animals acquired by Class B dealers are destined for research and NIH research in particular the standard of care while in the possession of some Class B dealers requires an inordinate amount of government enforcement and is not commensurate with the policies of most NIH funded research laboratories This dichotomy of standards reflects poorly on public perceptions of NIH and jeopardizes animal welfare This book will be crucial for NIH and other groups using random source animals in research including veterinary schools and research facilities Animal welfare advocates policy makers and concerned pet owners will also find this a vital and informative work for reconciling the needs of research with the welfare of animals

Planning and Designing Research Animal Facilities Jack Hessler, Noel Lehner, 2011-04-28 Research institutions have or are planning to build expand and renovate animal research facilities to keep up with the demands of biomedical research caused in part by growth in the use of genetically altered rodents and the upsurge of research in infectious diseases Properly designed facilities greatly facilitate effective management and high quality day to day animal care that is required to optimally support animal research and testing There are multiple solutions to address the myriad of factors that influence the design and construction of animal research facilities There is no best design applicable for all facilities and arguably not even a single best design for a given facility For this reason Planning and Designing Research Animal Facilities is not intended to be a how to book The goal is to cover the basic programmatic requirements of animal research facilities provide ideas for meeting those requirements while hopefully stimulating the creative process in which designers in consultation with those who work in animal research facilities generate even better ideas That is how progress has been made and will continue to be made Facilitates communication between the parties involved in planning and designing animal facilities by providing contemporary information and stimulating creativity that will help lead to wise decisions and advance the knowledge base for planning design and constructing animal research facilities
