Carbonate Facies and Sequence Stratigraphy ,1995 **Atlas of Submarine Glacial Landforms** J.A. Dowdeswell,M. Canals,M. Jakobsson,B.J. Todd,E.K. Dowdeswell,K. Hogan ,2016-12-16 New geophysical techniques multibeam echo sounding and 3D seismics have revolutionized high resolution imaging of the modern seafloor and palaeo shelf surfaces in Arctic and Antarctic waters generating vast quantities of data and novel insights into sedimentary architecture and past environmental conditions The Atlas of Submarine Glacial Landforms is a comprehensive and timely summary of the current state of knowledge of these high latitude glacier influenced systems The Atlas presents over 180 contributions describing illustrating and discussing the full variability of landforms found on the high latitude glacier influenced seafloor from fjords and continental shelves to the continental slope rise and deep sea basins beyond The distribution and geometry of these submarine landforms provide key information on past ice sheet extent and the direction and nature of ice flow and dynamics The papers discuss individual seafloor landforms landform assemblages and entire landsystems from relatively mild to extreme glacimarine climatic settings and on timescales from the modern margins of tidewater glaciers through Quaternary examples to ancient glaciations in the Late Ordovician The Zoological Record ,2003 *Proceedings of the Symposium on Mesozoic and Cenozoic Geology* Jiqing Huang,1986 The Geobiology and Ecology of Metasequoia Ben A. LePage,Christopher J. Williams,Hong Yang,2005-03-30 The plant fossil record indicates that the genus Metasequoia was widely distributed throughout the Northern Hemisphere from the early Late Cretaceous to the Plio Pleistocene Today the genus has shrunk to one species with approximately 5 000 mature individuals in southeastern China s Xiaohu Valley This book distills the current understanding of the biology ecology and physiology of fossil and living Metasequoia current research directions and problems that remain unresolved **Geology and Palaeontology of Southeast Asia** Teiichi Kobayashi,Ryūzō Toriyama,Wataru Hashimoto,1964 **Proceedings of the First ASCOPE Conference and Exhibition, October 11-13, 1977, Jakarta, Indonesia** ,1977 *Causes and Consequences of Globally Warm Climates in the Early Paleogene* Scott L. Wing,2003-01-01 Petroleum Abstracts. Literature and Patents ,1989 *Geologisches Jahrbuch* ,1976 **Geotitles** ,1989 **Proceedings of the Third Regional Conference on Geology and Mineral Resources of Southeast Asia, Bangkok, November 14-18, 1978** Prinya Nutalaya,1978 Isotopic Studies in Cretaceous Research A.-V. Bojar,M. C. Melinte-Dobrinescu,J. Smit ,2014-01-24 Isotopic studies combined with geochemical lithological mineralogical and palaeontological investigations have been widely used in reconstructing Cretaceous marine and continental environments Furthermore stable and radiogenic isotope trends play an important role in the interpretation of the causes and consequences of biotic turnovers at stratigraphic boundaries as well as in global correlations **Large Ecosystem Perturbations** Simonetta Monechi,R. Coccioni,Michael R. Rampino,2007-01-01 **Acta geologica polonica** ,1950 **Cretaceous Project 200, Volume 1: The Cretaceous World** M.B. Hart,S.J. Batenburg,B.T. Huber,G.D. Price,N.

Thibault, M. Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers that demonstrate these particularly Cretaceous events of warm climates sea level change and the impact of major volcanic events on the fauna and flora of the time Geochemical and stable isotope data are used to interpret these changing environments and their impact on the Cretaceous ecosystem The volume closes with a description of the recent drilling of the Chicxulub bolide impact site *Origin, Evolution, Environmental Impact of Oceanic LIPs* Clive R. Neal, William W. Sager, Takashi Sano, Elisabetta Erba, 2015-05 The origin evolution and environmental impact of large igneous provinces LIPs represents a topic of high scientific importance because the magmatism associated with these features cannot be directly related to plate tectonics and because the eruption of flood basalts may have global environmental consequences Oceanic LIPs are even more poorly understood due to their relative inaccessibility This volume takes a multidisciplinary approach to understanding LIP origin evolution and environmental impact in ocean basins Papers that focus on plate tectonic reconstructions petrologic and geophysical investigations of various LIPs and sedimentological and micropaleontological evidence of syn LIP sediments are presented Precious materials and data from dredging cruises and scientific ocean drilling expeditions have made this volume possible *Cretaceous Climate Events and Short-Term Sea-Level Changes* M. Wagreich, M.B. Hart, B. Sames, I.O. Yilmaz, 2020 Sea level constitutes a critical planetary boundary for geological processes and human life Sea level fluctuations during major greenhouse phases are still enigmatic and strongly discussed in terms of changing climate systems The geological record of the Cretaceous greenhouse period provides a deep time view on greenhouse phase Earth system processes that facilitates a much better understanding of the causes and consequences of global geologically short term sea level changes In particular Cretaceous hothouse periods can serve as a laboratory to better understand a near future greenhouse Earth This volume presents high resolution sea level records from globally distributed sedimentary archives of the Cretaceous involving a large group of scientists from the International Geoscience Programme IGCP 609 Marine to non marine sedimentary successions were analysed for revised age constraints the correlation of global palaeoclimate shifts and sea level changes tested for climate driven cyclicities and correlated within a high resolution stratigraphic framework of the Geological Timescale For hothouse periods the hypothesis of significant global groundwater related sea level change i.e. aquifer eustasy as a major process is reviewed and substantiated [Bulletin of Canadian Petroleum Geology](#), 1970 [Geologic Time Scale 2020](#) Felix Gradstein, James G. Ogg, Mark D. Schmitz, Gabi M. Ogg, 2020-10-30 Geologic Time Scale 2020 2 volume set contains contributions from 80 leading scientists who present syntheses in an easy to understand format that includes numerous color charts maps and photographs In addition to detailed

overviews of chronostratigraphy evolution geochemistry sequence stratigraphy and planetary geology the GTS2020 volumes have separate chapters on each geologic period with compilations of the history of divisions the current GSSPs global boundary stratotypes detailed bio geochem sequence correlation charts and derivation of the age models The authors are on the forefront of chronostratigraphic research and initiatives surrounding the creation of an international geologic time scale The included charts display the most up to date international standard as ratified by the International Commission on Stratigraphy and the International Union of Geological Sciences As the framework for deciphering the history of our planet Earth this book is essential for practicing Earth Scientists and academics Completely updated geologic time scale Provides the most detailed integrated geologic time scale available that compiles and synthesize information in one reference Gives insights on the construction strengths and limitations of the geological time scale that greatly enhances its function and its utility
