Stanley, 2008 Displaced or tectonostratigraphic terranes comprise a huge portion of real estate in the North American Cordillera Terranes are discrete fault bound blocks of regional extent with rocks and fossils that differ to a great extent from those of adjacent blocks The allochthonous nature of most terranes relative to adjacent craton is well established When mapped they resemble a collage of mixed rock types tectonic styles metamorphism and volcanic origins each part resembling the pieces of a puzzle Terrane studies remain integral to understanding the geological evolution of western North America Since the initiation of the concept summarized in 1979 by the late David L Jones the significance of fossils and stratigraphy has been key to solving the puzzle Chapters of this book written by experts in their field provide a sense of the diversity of approaches in paleontology and stratigraphy Contributions
