**Special Places** Betty Roots, Donald Chant, Conrad Heidenreich, 2011-11-01 High Park Scarborough Bluffs the Humber Valley the Port Lands These are among the special places of Toronto Each is a unique ecosystem within the busy urban region Even though Torontonians think of the city as almost entirely built up savannah or wetlands are only a subway ride away Special Places explores the changing ecosystems of the Toronto area over this century looking at the environmental conditions that influence the whole region and at the surprising range of plants and animals you can still find in many of its natural spaces Special Places explores the changing ecosystems of the Toronto area over this century looking at the environmental conditions that influence the whole region and at the surprising range of plants and animals you can still find in many of its natural spaces In Special Places a group of science professionals show how actions in one location produce ripples in every direction Changes in forest cover for example affect not only the organisms that live in the forest but also those that use it from time to time such as migrating birds and those that live in watersheds fed by water husbanded by forest cover Changes in bird populations cause changes in the populations of insects on which they feed changes in insect populations affect the plants on which they feed and so on As a new millennium arrives it is time to take stock of our effect on the world around us and to consider the consequences Special Places assesses how we can minimize the impact of human activity on the environment and even remedy some of the harm we have already done One way is to bridge the gap between scientists and decision makers by making the natural sciences more accessible to everyone Special Places was written at the initiative of the Royal Canadian Institute which is the oldest active scientific society in Canada and is dedicated to bringing the natural sciences to the public Richly illustrated and written for a general audience this book celebrates the glory and fragility of these interlocking ecosystems and helps us appreciate the uniqueness of the special places

General Technical Report RMRS ,1998      **Volunteer Stream Monitoring** ,1997      Combined Sewer Overflows and the Multimetric Evaluation of Their Biological Effects ,1996      **River Ecology and Management** Robert Naiman, Robert E. Bilby, 2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing

these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management

**Microbial Diversity and Ecosystem Functioning in Fragmented Rivers Worldwide** Lunhui Lu, Dayong Zhao, Leonardo D. Fernández, Zhe Li, 2023-11-27 Dams or barriers are among the most significant anthropogenic threats to global freshwater ecosystems although they provide invaluable services for shipping hydropower generation flood protection and storage of drinking and irrigation water River fragmentations due to dams and barriers lead the aquatic landscape into isolated river sections resulting in hydromorphological discontinuities along longitudinal or lateral gradients Fragmented river habitats are unstable They experience uncertain disturbances in both time and space with random and complex hydrological and environmental processes such as water flow particulate matter sedimentation reservoir regulation and terrestrial input The diversity composition functionality and activity of microbial communities are important indicators of river ecosystem functions and services Yet river fragmentations are likely to disrupt and reconstruct microbial communities redirecting the patterns of biogeochemical cycles of biogenic elements Methodology such as mathematical models is still limited to describing and elucidating microbial processes under changing hydrological environments in the fragmented rivers Thus how do the riverine microbial communities and ecosystem functions respond to the fragmentation in rivers This Research Topic represents a collective focus on microbial ecology functional diversity and new microbial modeling in fragmented rivers We wish to present new findings in community assembly mechanisms biotic interactions functional diversity and ecosystem functioning responses to the river fragmentations New perspectives will also provide us with deep insights into the ecological effects of river fragmentation This Research Topic aims to present the original research articles and reviews to provide new findings on microbial diversity and ecosystem functioning in fragmented rivers worldwide We welcome original research reviews mini reviews opinions methods hypotheses and theories and perspectives The directions include but are not limited to the following aspects The continuum of the microbial community in responses to dams or barriers Novel microbial community assembly mechanisms functional traits and biotic interactions in fragmented rivers at local regional and global scales Functional genes functional groups and functional diversity in driving biogenic element cycles Mathematical modeling in aquatic microbial ecology

**Geomorphic Analysis of River Systems** Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary's research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and

Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at [www.wiley.com/go/fryirs\\_riversystems](http://www.wiley.com/go/fryirs_riversystems)
