Stream Of Consciousness Unity And Continuity In Conscious Experience:

Stream of Consciousness Barry Dainton, 2000 Stream of Consciousness will interest anyone concerned with the current debates on consciousness in philosophy psychology and neuroscience **BOOK JACKET** *Henri Bergson and the Philosophy of Religion* Matyáš Moravec, 2023-08-04 This book connects the philosophy of Henri Bergson to contemporary debates in metaphysics and analytic philosophy of religion More specifically the book demonstrates how Bergson s philosophy of time can respond to the problem of foreknowledge and free will The question of how humans can be free if God knows everything has been a perennial issue of debate in analytic philosophy of religion The solution to this problem relies heavily on what one thinks about time The problem of time is central to Bergson s philosophical system In this book the author offers a systematic application of Bergson s thought to the freedom and foreknowledge problem The first chapter presents a discussion of Bergson s central concept of la dur e duration The subsequent two chapters link la dur e to the relation of time and space Here the author provides a Bergsonian response to McTaggart s argument for the unreality of time and develops a novel theory of time connected to Bergson s analysis of temporal experience The last three chapters explore the relation between free will determinism and divine foreknowledge The author reconstructs Bergson s theory of freedom and shows how it undermines the underlying dogmas of contemporary free will theories The author then argues that Bergson s philosophy can be used to resolve the free will and foreknowledge problem in the philosophy of religion The monograph concludes by opening avenues for new research into Bergson and analytic philosophy of religion such as the philosophy of religious language the relation between God and modality religious experience and religious pluralism *Henri Bergson and the Philosophy of Religion* will be of interest to scholars and advanced students working on Bergson 20th century continental philosophy philosophy of religion and philosophy of time *Cognitive Phenomenology* Elijah Chudnoff, 2015-04-10 Phenomenology is about subjective aspects of the mind such as the conscious states associated with vision and touch and the conscious states associated with emotions and moods such as feelings of elation or sadness These states have a distinctive first person feel to them called their phenomenal character In this respect they are often taken to be radically different from mental states and processes associated with thought This is the first book to fully question this orthodoxy and explore the prospects of cognitive phenomenology applying phenomenology to the study of thought and cognition Does cognition have its own phenomenal character Can introspection tell us either way If consciousness flows in an unbroken stream as William James argued how might a punctuated sequence of thoughts fit into it Elijah Chudnoff begins with a clarification of the nature of the debate about cognitive phenomenology and the network of concepts and theses that are involved in it He then examines the following topics introspection and knowledge of our own thoughts phenomenal contrast arguments the value of consciousness the temporal structure of experience the holistic character of experience and the interdependence of sensory and cognitive states the relationship between phenomenal character and mental representation Including chapter summaries

annotated further reading and a glossary this book is essential reading for anyone seeking a clear and informative introduction to and assessment of cognitive phenomenology whether philosophy student or advanced researcher It will also be valuable reading for those in related subjects such as philosophy of mind philosophy of psychology and epistemology

Internalism and the Limits of Twin Earth Scenarios Jan Almäng, 2025-04-01 Internalism and the Limits of Twin Earth Scenarios A Study of Phenomenal Intentionalism explores visual perceptual experiences and whether or not visual intentional content is internal or external Coming from the standpoint of phenomenal intentionalism this book assumes that phenomenal consciousness is internal to the subject of a perceptual experience Jan Almäng argues that the structure of the phenomenal character of visual experiences sets certain limits with respect to whether Twin Earth thought experiments can be successful suggesting that while Twin Earth thought experiments are successful for entities such as colours they fail with respect to more complex geometrical structures Because visual perceptual experiences represent in an analogue manner this prevents certain kinds of Twin Earth scenarios from being successful Almäng then argues that some phenomenal intentional content is internal If visual experiences have a perspectival structure that this by necessity means that they are intentional

The Oxford Handbook of Philosophy and Psychiatry KWM Fulford, Martin Davies, Richard Gipps, George Graham, John Sadler, Giovanni Stanghellini, Tim Thornton, 2013-07-04 Philosophy has much to offer psychiatry not least regarding ethical issues but also issues regarding the mind identity values and volition This has become only more important as we have witnessed the growth and power of the pharmaceutical industry accompanied by developments in the neurosciences However too few practising psychiatrists are familiar with the literature in this area The Oxford Handbook of Philosophy and Psychiatry offers the most comprehensive reference resource for this area ever published It assembles challenging and insightful contributions from key philosophers and others to the interactive fields of philosophy and psychiatry Each contribution is original stimulating thorough and clearly and engagingly written with no potentially significant philosophical stone left unturned Broad in scope the book includes coverage of several areas of philosophy including philosophy of mind science and ethics For philosophers and psychiatrists The Oxford Handbook of Philosophy and Psychiatry is a landmark publication in the field one that will be of value to both students and researchers in this rapidly growing area

Narrative and Ethical Understanding Garry L. Hagberg, 2024-07-05 There has been a steady stream of articles written on the relations between ethics and the interpretation of literature but there remains a need for a book that both introduces and significantly contributes to the field particularly one that shows how we can think more openly and creatively about the multiform powers of ethical narrative by considering ethically significant literature This volume offers an analytically acute and culturally rich way of understanding how it is that we can productively think philosophically about the narrative structures that describe our ethical lives and what kind of distinctive conceptual and in some cases personal progress we can make by doing so Given the extremely widespread interest in ethical issues this volume will strike resonant chords far and wide on arrival while offering

something new in bringing together the study of long form narrative the language of moral psychology and detailed literary case studies Given the vast expansion of narrative studies in recent years the time for just such a volume is right

Phenomenology Shaun Gallagher, 2022-08-23 With a focus on phenomenological methods this new edition of Shaun Gallagher's highly regarded textbook provides a comprehensive introduction to phenomenology considered as a philosophical and interdisciplinary practice Phenomenology 2e encompasses both the classic 20th century explications of phenomenology as well as recent developments in the practical and scientific uses of phenomenology Key features Explores debates about naturalizing phenomenology and reviews recent extensions of phenomenological methodology Relates the phenomenological analysis of intentionality to discussions of enactive perception Includes a discussion of the phenomenology of performance and a new chapter on critical phenomenology Examines specialized topics in phenomenology including Husserl's concept of hyletic data embodiment time consciousness action intersubjectivity and self consciousness Each chapter concludes with suggestions for further reading This book is essential reading for all undergraduate and graduate philosophy students taking courses in phenomenology It is also ideal for use on cognitive science modules that incorporate a phenomenological perspective

The Philosophy of Psychiatry Jennifer Radden, 2004 This is a comprehensive volume of essays by leading thinkers that explores the newly emerging interdisciplinary field of the philosophy of psychiatry

What Is the Present? Michael North, 2018-06-05 A provocative new look at concepts of the present their connection to ideas about time and their effect on literature art and culture The problem of the present what it is and what it means is one that has vexed generations of thinkers and artists Because modernity places so much value on the present many critics argue that people today spend far too much time in the here and now but how can we tell without first knowing what the here and now actually is What Is the Present takes a provocative new look at this moment in time that remains a mystery even though it is always with us Michael North tackles puzzles that have preoccupied philosophy neuroscience psychology history and aesthetic theory and examines the complex role of the present in painting fiction and film He engages with a range of thinkers from Aristotle and Augustine to William James and Henri Bergson He draws illuminating examples from artists such as Fra Angelico and Richard McGuire filmmakers like D W Griffith and Christopher Nolan and novelists such as Elizabeth Bowen and Willa Cather North offers a critical analysis of previous models of the present from the experiential present to the historical period we call the contemporary He argues that the present is not a cosmological or experiential fact but a metaphor a figurative relationship with the whole of time Presenting an entirely new conception of the temporal mystery Georg Lukacs called the unexplained instant What Is the Present explores how the arts have traditionally represented the present and also how artists have offered radical alternatives to that tradition

Meaning Takes Time to Unfold: Towards a Heideggerian Ontology of Temporal Differentiation Renxiang Liu, 2025-03-29 This book proposes a reconsideration of the intertwinement of time meaning and the piecemeal unfolding of things It gives a phenomenological ontological account of the

time horizon at work in each being's manifestation explores the notion of time as a productive resistance in this manifestation and redefines human finitude and subjectivity accordingly to enable an attentive mode of waiting for meaning. The discussion is significantly informed by but not limited to the works of Martin Heidegger and thus responds to the question of the turn in Heidegger's career by suggesting a systematic framework centered upon a generalized finitude of Being as such which may have consistently underlain Heidegger's thinking before and after the turn. As subjectivity receives a qualified affirmation in the book in contrast to both subjectivist voluntarism and impersonalism, this text also opens up the possibility to think of the plurality of human beings as essential to being human. While the book is a continuation of a few traditions in continental philosophy which takes time philosophically seriously, it is distinctive in not considering time abstractly but always situating its conceptualization in the context of what it means for a thing or an event to be. Instead of a mere measure of change, an itself invariant structure of happening or a new metaphysical absolute time is interpreted here as the way beings are. The interpretation comes from and seeks to do justice to the basic experience of time bringing about wonder, fulfillment or disappointment. The book appeals to students and researchers working on Heidegger scholarship, phenomenology and more generally the philosophy of time and subjectivity. It inspires a patience for meaning in mortal transience to find dignity and beauty in what will eventually expire, that is in life as such.

Reading Sartre Jonathan Webber, 2010-10-04. Specially commissioned chapters examine Sartre's achievements and consider his importance to contemporary philosophy.

Neuroscience and Media Michael Grabowski, 2014-12-05. This volume explores how advances in the fields of evolutionary neuroscience and cognitive psychology are informing media studies with a better understanding of how humans perceive, think and experience emotion within mediated environments. The book highlights interdisciplinary and transdisciplinary approaches to the production and reception of cinema, television, the Internet and other forms of mediated communication that take into account new understandings of how the embodied brain senses and interacts with its symbolic environment. Moreover, as popular media shape perceptions of the promises and limits of brain science, contributors also examine the representation of neuroscience and cognitive psychology within mediated culture.

Fostering the Ontological Turn Rosaria Egidi, Guido Bonino, 2013-05-02. Gustav Bergmann 1906-1987 was arguably one of the greatest ontologists of the twentieth century. In 2006 and 2007, after a period of relative neglect, international conferences devoted solely to Bergmann's work were held at the University of Iowa in the USA, Université de Provence in France and Università degli Studi di Roma Tre in Italy. The fifteen papers collected in this volume were presented at the third of these conferences in Rome and are here divided into three sections: Categories of a realistic ontology; World, mind and relations; Metaphysics of space and time.

The View from Everywhere Helen Yetter-Chappell, 2025 Few contemporary philosophers take idealism seriously The View from Everywhere aims to change this developing a new quasi Berkeleyan realist idealism which does not depend upon God to do the metaphysical heavy lifting This non theistic idealism requires a fresh approach to the persistence and stability of the physical world The resulting theory offers unique accounts of the nature of perception and the relationship between our minds and our bodies When we peel away all the attributes of God that aren't essential for ensuring the stability of the world we're left with a simpler and more intelligible metaphysical picture On the resulting view reality is a vast unity of consciousness that binds together experiences as of every object from every perspective a tapestry woven out of experiential threads Helen Yetter Chappell seeks to fully flesh out this idealist metaphysics in a way that lets us make sense of the structure of reality and the deliverances of scientific inquiry to consider the relationship between our minds and reality within an idealist framework and to show that there are distinctive benefits to embracing idealism benefits that should lead us to reassess our commitment to the materialist orthodoxy

Towards embodied artificial cognition: TIME is on my side Michail Maniadakis, Marc Wittmann, Sylvie Droit-Volet, Yoonsuck Choe, 2015-06-05 From the moment of birth humans

and animals are immersed in time all experiences and actions evolve in time and are dynamically structured The perception of time is thus a capacity indispensable for the control of perception cognition and action The last 10 years have witnessed a remarkable resurgence of interest in timing and time perception with a continuously increasing number of researchers exploring these innate abilities However existing robotic systems largely neglect the key role of time in cognition and action This is a major barrier for accomplishing the long term goal of symbiotic human robot interaction The critical question is how is time instantiated in a biological system and how can it be implemented in an artificial system Recent years have for example seen an increasing focus on the relationship between affective states and the experience of time The influence of affective states on subjective time seems to depend on the embodiment of emotions intertwined affective and interoceptive states may create our subjective experience of time Since robotic systems are in essence embodied information processing systems that interact with the real world we hope to inspire a reciprocal exchange of ideas between the field of Robotics and the Cognitive Neurosciences In this research topic we call researchers from different disciplines Robotics Neurosciences and Psychology to present their empirical work their models or reviews on the question of how time judgments are instantiated in biological and artificial systems Of particular interest are papers on time perception in humans and animals with a focused interest on embodied time perception i e the influence of affective and body states on time judgments Moreover the present Research Topic seeks to gather papers discussing the key role of time on different aspects of robotic cognition as well as modeling approaches We are interested in paving the way for a new generation of intelligent computational systems that incorporate the sense of time in their processing loop and thus accomplish more efficient and more advanced cognitive capacities

The Roles of Representation in Visual Perception Robert French, Berit Brogaard, 2024-05-30 This volume contains new papers addressing a number of new and traditional issues pertaining to the roles of representations in visual perception Among these issues is the one concerning the nature of the perceptual state itself e g on the issue of whether the perceptual state like its distal objects is structured for instance by possessing a spatial character Other issues include those of whether at least aspects of the distal object are presented immediately to us visually whether representation plays any interesting role in disjunctivist and naive realist accounts of visual experience and the relationship among visual perception attention and representation The anthology includes a wide variety of positions on the subject of the roles of representations in visual perception which would help to close the literature gap and will be of interest to scholars from all schools and trends of philosophy of mind

Implementing Mobile TV Amitabh Kumar, 2010-03-08 *The Emotions* Julien A. Deonna, Fabrice Teroni, 2012 The emotions are at the centre of our lives and for better or worse imbue them with much of their significance The philosophical problems stirred up by the existence of the emotions over which many great philosophers of the past have laboured revolve around attempts to understand what this significance amounts to Are emotions feelings thoughts or experiences If they are experiences what are they experiences of Are emotions rational In what sense do

emotions give meaning to what surrounds us The Emotions A Philosophical Introduction introduces and explores these questions in a clear and accessible way The authors discuss the following key topics the diversity and unity of the emotions the relations between emotion belief and desire the nature of values the relations between emotions and perceptions emotions viewed as evaluative attitudes the link between emotions and evaluative knowledge the nature of moods sentiments and character traits Including chapter summaries and guides to further reading The Emotions A Philosophical Introduction is an ideal starting point for any philosopher or student studying the emotions It will also be of interest to those in related disciplines such as psychology and the social sciences
