*Strength of Metals and Alloys (ICSMA 7)* H. J. McQueen, J.-P. Bailon, J. I. Dickson, 2016-07-29 *Strength of Metals and Alloys Volume 3 ICSMA 7* presents the proceedings of the 7th International Conference on the Strength of Metals and Alloys held in Montreal Canada on August 12-16 1985. The book includes papers on the work hardening of face centered cubic single crystals, precipitation hardening and microstructure evolution and flow stress during hot working. The text also covers papers on microstructure evolution and flow stress during hot working, the prediction of deformation textures in cubic metals, creep of copper base shape memory alloys and flow behavior of nickel base superalloys at isothermal forging temperatures and strain rates. Grain refinement by recrystallization, hot rolling to achieve high strength and notch toughness in microalloyed steel plate as well as the influence of mean stress on fatigue strength of Ti 6Al 4V are also encompassed. The book further includes papers on the comparative mechanical properties of human bones, the effect of precipitation hardening on the decomposition of the solid solution in 7075 alloy during quenching and the mechanical properties of stable and unstable austenitic stainless steels.

*Strength of Metals and Alloys (ICSMA 8)* P. O. Kettunen, T. K. Lepistö, M. E. Lehtonen, 2013-10-22. Containing almost 250 technical and review papers, these proceedings form an authoritative state of the art review of this important multidisciplinary topic. Emphasis is placed on the study of the strength of mechanical properties of materials and their dependence on the microstructure and defect arrangements. Areas covered include dislocations, dislocation arrangements, plastic deformation, strengthening mechanisms, cyclic deformation and fatigue, plastic deformation at high temperatures, fracture, modern strengthening methods in steels, boundaries and interfaces.

**Deformation Processes in Minerals, Ceramics and Rocks** D.J. Barber, P.G. Meredith, 2012-12-06. This monograph has its origins in a two day meeting with the same title held in London, England, in the spring of 1987. The idea for the meeting came from members of the UK Mineral and Rock Physics Group. It was held under the auspices of and made possible by the generous support of the Mineralogical Society of Great Britain and Ireland. Additional financial assistance was provided by ECC International plc and the Cookson Group plc. The aims of the London meeting were to survey the current state of knowledge about deformation processes in non-metallic materials and to bring together both experts and less experienced Earth scientists and ceramicists who normally had little contact but shared common interests in deformation mechanisms. This monograph has similar aims and indeed most of its authors were keynote speakers at the meeting. Consequently most of the contributions contain a review element in addition to the presentation and discussion of new results. In adopting this format the editors hope that the monograph will provide a valuable state of the art sourcebook both to active researchers and also to graduate students just starting in the relevant fields.
