Dyadic Coping: A Collection of Recent Studies Guy Bodenmann, Mariana K. Falconier, Ashley K. Randall, 2019-09-25

Dyadic coping is a concept that has reached increased attention in psychological science within the last 20 years. Dyadic coping conceptualizes the way couples cope with stress together in sharing appraisals of demands, planning together how to deal with the stressors, and engage in supportive or joint dyadic coping. Among the different theories of dyadic coping, the Systemic Transactional Model (STM) (Bodenmann, 1995, 1997, 2005) has been applied to many studies on couples coping with stress. While a recent meta-analysis shows that dyadic coping is a robust and consistent predictor of relationship satisfaction and couple's functioning in community samples, some studies also reveal the significance of dyadic coping in dealing with psychological disorders, e.g., depression, anxiety, or severe illness, e.g., cancer, diabetes, COPD, etc. Researchers all over the world build their research on this or other concepts of dyadic coping, and many typically use the Dyadic Coping Inventory (DCI) for assessing dyadic coping. So far, research on dyadic coping has been systematically presented in two books: one written by Revenson and Kayser (Bodenmann, 2005) focussing on emerging perspectives on couples coping, the other by Falconier and Randall (Bodenmann, more recently in 2016) addressing intercultural aspects of dyadic coping in African American, Asian, and European couples. This eBook gives an insight into recent dyadic coping research in different areas and countries.
