

Stress Induced Analgesia

- + The pain inhibiting centers can be activated naturally by injury and athletic over-exertion.
- + Often, people severely injured or in an athletic competition may not feel pain until the event has passed.
- + Stress occurring during the event can trigger pain inhibition centers.
- + Stress induced analgesia activates the following:
 - + Raphe nuclei descending tracts
 - + Release of hormonal endorphins from the pituitary gland (beta-endorphins)
 - + Release of hormonal endorphins from the adrenal medulla (enkephalins)
- + Hormonal endorphins bind to opiate receptors in the brain and spinal cord.
- + Beta-endorphins can trigger analgesic effects that can last for hours.

Advances in Electromagnetic Fields in Living Systems James C. Lin, 2006-05-28 In spite of the remarkable progress that has been made against cancer the battle is far from over It is estimated that there are 175 000 new female breast cancer cases annually and 40 000 deaths resulting from it in the U S In fact breast cancer incidence rates have shown little change in the 1990s while breast cancer death rates have been declining about 2 percent per year since 1990 Ries et al 1999

Modern mammography is relied upon most often for breast cancer screening Mammograms can detect most breast cancers but they miss some Its accuracy and sensitivity are age and breast density dependent For example the false negative rate is about 25% for women under age 50 with invasive breast cancer Kerlikowske et al 1996 1997 It reduces to 10% for women more than 50 years of age Although the amount of radiation exposure during mammography is minimal about the same as receiving a dental x ray the radiation from mammograms can cause additional breast cancer deaths Feig 1996 NIH 1997 It has been estimated that if 10 000 women have yearly mammograms for ten years the radiation from mammograms will cause one additional breast cancer death Because the absolute benefit of screening women aged 40 to 49 years is small and there is concern that the harm may be substantial there have been suggestions that these women should be informed about the potential benefits and risks of screening mammography Kerlikowske 1997
