The Developmental Psychopathology of Eating Disorders Linda Smolak, Ruth H. Striegel-Moore, Michael P. Levine, 2013-01-11 Although eating problems ranging from body dissatisfaction and dieting to anorexia nervosa or bulimia nervosa can begin and typically have their roots in childhood theory and research in developmental psychopathology and developmental psychology have not received substantial attention in eating disorders research This book provides crucial background material from both fields and then makes direct applications to numerous aspects of the field of eating disorders including theory research treatment and primary prevention This book was born out of a transaction between frustration and optimism The frustrations reflected the limitations of current knowledge about eating problems and disorders Etiological causes which are sensitive and specific to eating disorders have been elusive Although

there is some understanding of risk factors little is known about protective factors This has made prevention among other things difficult Furthermore the mechanisms underlying the association between risk factors and disordered eating are poorly understood For example it is known that women are at greater risk than men are but clinicians are hard pressed to get beyond gender based speculations and demonstrate why this is true The optimism grows from familiarity with the field of developmental psychopathology It seems evident that this approach has much to offer the field of eating disorders This book is an early step in the integration of developmental psychopathology into theorizing research treatment and prevention of eating disorders It addresses four specific goals to introduce the principles and methodologies of developmental psychopathology to review the work of developmental psychologists in several major areas of behavior relevant to understanding the causes treatment and prevention of eating disorders to apply developmental psychopathology principles to the area of eating disorders both in the form of theoretical models and in specific areas issues raised by developmental psychopathology and to discuss the implications of developmental approaches for prevention programs and treatments

situations of overwhelming violence can permanently damage a person's capacity for responsive agency For Christians this theory raises the very troubling possibility that humans can inflict ultimate harm on each other such that some individuals' eternal destiny can be determined not by themselves but by those who do great harm Jennifer Beste addresses the challenges that contemporary trauma theory and feminist theory pose to deeply held theological convictions about human freedom and divine grace Do our longstanding widespread beliefs regarding one's access to God's grace remain credible in light of recent social scientific research on the effects of interpersonal injury With an eye toward the concrete experiences of trauma survivors Beste carefully considers the possibility that one can be victimized in such a way that his or her receptiveness to God's grace is severely diminished or even destroyed Drawing on insights present in feminist and trauma theory Beste articulates a revised Rahnerian theology of freedom and grace responsive to trauma survivors in need of healing Her thinking is characterized by two interconnected claims that human freedom to respond to God's grace can in fact be destroyed by severe interpersonal harm and that God's love can be mediated at least in part through loving interpersonal relations Offering crucial insights that lead to a more adequate understanding of the relation between God's grace and human freedom Beste's important theory reconfigures our visions of God and humanity and alters our perceptions of what it means to truly love one's neighbor
