Stress Reduction And Prevention:

Stress Reduction and Prevention M. Jaremko, Donald Meichenbaum, 2013-11-11 Since 1950 when Hans Selye first devoted an entire book to the study of stress professional and public concern with stress has grown tremendously. These concerns have contributed to an understanding that has implications for both prevention and treatment. The present book is designed to combine these data with the clinical concerns of dealing with stressed populations. In order to bridge the gap between research and practice contributions are included by major researchers who have been concerned with the nature of stress and coping and by clinical researchers who have developed stress management and stress prevention programs. The book is divided into three sections. The goal of the first section is to survey the literature on stress and coping and to consider the implications for setting up stress prevention and management programs. Following some introductory observations by the editors are the observations of three prominent investigators in the field of stress and coping. Irving Janis, Seymour Epstein and Howard Leventhal have conducted seminal studies on the topic of coping with stress. For this book they have each gone beyond their previous writings in proposing models and guidelines for stress prevention and management programs. While each author has tackled his task somewhat differently a set of common suggestions has emerged. **Stress**

Putney, 2003-07-14 *The Full Value of Parks* is the first comprehensive look at the values associated with parks and other kinds of protected areas. Much has been written about the importance of parks to the tourism industry, yet the reasons why people care deeply about them usually have little or nothing to do with money. Instead, people value parks as sacred sanctuaries and places of spiritual self-discovery, as settings of breathtaking beauty, as venues of scientific inquiry, as destinations for much-needed recreation, even as places where one can go to heal a wounded psyche. The profound attachment that people feel to the world's great natural areas and cultural sites arises from an incredibly diverse, complex, and sometimes conflicting array of values. After a thorough overview of the kinds of values found in parks, the unique challenges of managing parks to accommodate differing viewpoints are surveyed in this path-breaking book. Drawing on insights from a broad group of international experts and offering examples from Siberia to tropical Africa, from the Andes to

the Australian outback The Full Value of Parks is an engaging and lucid exploration of the entire range of benefits and values of protected areas from economics to the intangible **Mental Health Research** United States.
