Women and Depression Corey L. M. Keyes, Sherryl H. Goodman, 2006-01-23 Throughout the world rates of depression are greater among females than males and this gender gap emerges during adolescence and persists throughout adulthood Until recently women's health has centered on the topic of reproductive health because research focused almost exclusively on biological and anatomical differences distinguishing men and women Social and behavioral research on gender differences in health now employs multiple disciplinary frameworks

and methodologies and researchers seek to understand the higher rates of specific diseases and disorders in women and men. Symptoms of depression and the diagnosis of depression are more prevalent in women and research that focuses on biological, psychological, and sociopolitical explanations for this gender gap should now be brought together to better inform efforts at treatment and prevention. Women and Depression is a handbook that serves to move toward a more integrative approach to women's depression in particular and mental health for all more generally.

Handbook of Social Support and the Family Gregory R. Pierce, Barbara R. Sarason, I.G. Social Support, Life Events, and Depression Nan Lin, Alfred Dean, Walter M. Ensel, 2013-10-22 Social Support, Life Events, and Depression describes a research program that looked into the social process of mental health. This research program provided an arena for opportunities to explore many topics concerning the relationships among social support, life events, and mental health, primarily depressive symptoms. The volume is organized into six parts. Part I sets the background and scope of the study. Part II focuses on the dependent variable, depression, one of the two independent variables, life events, and the key control variable, psychological resources. Part III describes the measurement of social support. Part IV examines the basic models involving social support, life events, psychological resources, and depression. Part V proceeds to examine the reduced basic model in terms of a number of factors such as age, sex, marital status, social class, and history of prior illness. Part VI discusses several specific issues regarding the dynamics of social support. This book is intended primarily for researchers, scientists, professionals, and instructors who are interested in examining both conceptual and methodological issues regarding social factors in mental health. Thus, those working in the area of public health, social and behavioral sciences, and medical professions may find this book useful. Because of the way the chapters are organized, it is possible for researchers and practitioners alike to select and read chapters pertinent to their specific interests.

Health Psychology of Women Catherine Niven,Doug Carroll,2013-12-16 First Published in 1993 Since health psychology is concerned with the universal values of life and death well being and suffering it might be expected that its researchers would be keen to examine both male and female experiences of these phenomena In practice however health psychology has followed health research in adopting a largely male perspective both in its general approach and selection of topics Women are different from men not only in terms of anatomy but in terms of the socialization processes to

which they have been exposed and the social and economic positions they occupy These differences have a significant impact on women s health predisposing them to some disorders and protecting them from others While it is true that male mortality exceeds female mortality from conception to old age women s survival has the price of increased mental and physical illness Men die but women suffer Despite a growing awareness of these differences there continues to be a distinct bias towards using male subjects for research and studying those diseases which affect more men than women The Health Psychology of Women is a response to this imbalance and a challenge to the attitude which explores the behavior of half the population in order to draw conclusions about the experience of the whole It is essential reading for students and researchers of psychology and health and health professionals in training and practice
