

Stretto House Steven Holl Architects

Joan M. Marter

Stretto House Steven Holl Architects:

Stretto House Steven Holl Architects, 1996 The *Stretto House* built near Dallas Texas in 1992 exemplifies the poetic nature of his architecture as well as his method of following an initial concept to its fullest realization The need for protection from the scorching Texas sun led the architect to explore the ideas of shadow and overlap the bold overlapping stretto between heavy percussion and light strings in Bela Bartok's *Music for Strings Percussion and Celeste* proved fertile for the form and construction of the residence Like Bartok's score the house has four sections each consisting of heavy concrete block spatial dams with light metal roofed aqueous space flowing between Orthogonal floors pull one space through to the next while curvilinear roofs stretch space over the walls Essential to the sequential balance are rich details and carefully selected materials including glass slumped or cast in fluid shapes and liquid terrazzo **Stretto House, Dallas, Texas**, 1996 *Steven Holl Architect* Kenneth Frampton, 2003 The definitive monograph on the leading American architect

Intertwining: Steven Holl, 1996-04 To his earlier articulated concept of anchoring which connects a construction with the history of the ground locale and region Holl adds the concept of intertwining which is illuminated by sensory perceptual conceptual and emotional experiences Illustrates with drawings plans and photographs projects in Japan Finland Germany Switzerland Holland Korea and Norway No index Annotation copyright by Book News Inc Portland OR Architecture and Spectacle: A Critique Gevork Hartoonian, 2016-12-05 Focusing on six leading contemporary architects Peter Eisenman Frank Gehry Bernard Tschumi Zaha Hadid Rem Koolhaas and Steven Holl this book puts forward a unique and insightful analysis of neo avant garde architecture It discusses the spectacle and excess which permeates contemporary architecture in reference to the present aesthetic tendency for image making but does so by applying the tectonic of theatricality discussed by the 19th century German architect Gottfried Semper In doing so it breaks new ground by opening up a dialogue between the study of the past and the design of the present The work of each discussed architect is seen as addressing a historiographical problem To this end and this is the second important aspect of this book the chosen buildings are discussed in terms of the thematic of the culture of building the tectonic of column and wall for example rather the formal and this through a discussion that is informed by the latest available theories Having set the aesthetic implication of the processes of the digitalization of architecture the book's conclusion highlights strategies by which architecture might postpone the full consequences of digitalization and thus the becoming of architecture as ornament on its own right *Steven Holl* Steven Holl, 2002 An overview of the built work of architect Steven Holl *Idea and Phenomena* focuses on the sculptural expression inherent in his designs material composition and use of light Apparent in such projects as his Makuhari Housing in Chiba Japan where he designed a new city block on dredged fill at the rim of Tokyo Bay Holl has devoted over 20 years of his professional life to exploring the use of movable walls for creating variety and what he calls spaces for individual life Even more essential to his oeuvre is what critic Herbert Muschamp has described as its astonishing sculptural presence created from the strikingly

assured interplay between windows and walls curves and grids voids and planes In his fine fibered use of materials Holl employs his principle of the stone and the feather juxtaposing thin sheets of zinc roofing with rough concrete walls along knife edged junctures The results as Idea and Phenomena clearly shows from the first sketch to the final construction are buildings alert to emotional needs the spiritual properties of space and the specifics of their own surroundings

Encyclopedia of Twentieth Century Architecture R. Stephen Sennott, 2004 For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedic of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries

The Material Imagination Matthew Mindrup, 2016-03-03 In recent years architectural discourse has witnessed a renewed interest in materiality under the guise of such familiar tropes as material honesty form finding or digital materiality Motivated in part by the development of new materials and an increasing integration of designers in fabricating architecture a proliferation of recent publications from both practice and academia explore the pragmatics of materiality and its role as a protagonist of architectural form Yet as the ethos of material pragmatism gains more popularity theorizations about the poetic imagination of architecture continue to recede Compared to an emphasis on the design of visual form in architectural practice the material imagination is employed when the architect thinks matter dreams in it lives in it or in other words materializes the imaginary As an alternative to a formal approach in architectural design this book challenges readers to rethink the reverie of materials in architecture through an examination of historical precedent architectural practice literary sources philosophical analyses and everyday experience Focusing on matter as the premise of an architect's imagination each chapter identifies and graphically illustrates how material imagination defines the conceptual premises for making architecture

The Architecture of the Facade Randall Korman, 2022-12-30 The Architecture of the Facade provides a comprehensive study of the facade as both a physical and cultural artifact highlighting its significance as a critical component of the civic realm and arguing for the restoration of the art of the facade as both a subject of study within academia and an aspiration within the profession at large As the principal surface of mediation contextualization and representation the facade carries the lion's share of responsibility for containing the internal environment and confronting the outer world And yet in recent decades the very question of what exactly a facade is has been raised by the dramatic changes in building technology advances of parametric design and the ubiquity of autonomous buildings The Architecture of the Facade addresses these and other related issues The book is organized into 12 chapters with each chapter focusing on a particular aspect of the phenomenon of the facade such as those of wall the frame transparency and the role of the facade in

civic space Korman also discusses proportional systems the language of composition the role of precedent the importance of context and much more Over 350 photos and diagrams provide readers with a variety of examples of artful facades throughout history Online teaching resources that accompany this book include a course syllabus a glossary and a Pinterest tack board of facades This book will be of great interest to students in architecture studios as well as instructors and professional architects interested in facade design Design Representation Gabriela Goldschmidt, William L.

Porter, 2007-05-28 there is a global network of academics researchers and methodologists who will buy this book or want it in their institute libraries Prof John Harbraken As the field of human computer interaction grows this book is likely to be a basic resource Prof Chuck Eastman Design representation is necessary for all design activity You will gain a guide to both theory and practical application in this discussion of representation as it occurs during the process of design Goldschmidt and Porter give you perspectives on representational issues in design that are both informative and evocative of further inquiry The unique interdisciplinary approach brings a new dimension to the study of representation benefiting the global network of researchers students and practitioners in all areas of design Rather than addressing the larger framework directly a series of smaller case studies are presented each dealing with aspects of representation in architecture and engineering Binding together historical cultural cognitive social and technological perspectives eliminates the need for further reading Innovative research methods based on numerous well illustrated examples will leave you with new ideas to build on International contributors focus on worldwide research activities offering you more than just an expansion of a single viewpoint Design Representation delves into the common roots of representation in all design disciplines through case studies historical investigations theoretical constructs and programming If you are involved in any design activity this will be a truly exciting addition to your bookshelf **Steven Holl** Steven Holl, 1994 *House: Black Swan Theory* Steven Holl, 2007-03-29 Using

site as a starting point readers can follow Holl's entire creative process The text contains watercolours photographs renderings plans and sketches for houses in New York Arizona Texas Washington D C and Martha's Vineyard **Steven Holl, 1986-1996** Steven Holl, 1996 **Spaces** James McCown, 2005 Pictorial exploration of interior and exterior enclosures in both the public and private realms *The Architect and the Academy* Dean Hawkes, 2021-12-30 This book presents an expansive overview of the development of architectural and environmental research with authoritative essays spanning Dean Hawkes' impressive 50 year academic career The book considers the relationship between the technologies of the environment and wider historical and theoretical factors with chapters on topics ranging from the origins of modern building science in Renaissance England to technology and imagination in architecture It includes numerous architectural examples from renowned architects such as Christopher Wren Peter Zumthor Alvar Aalto Robert Venturi and Carlo Scarpa Aimed at students scholars and researchers in architecture and beyond this illustrated volume collates important and wide ranging essays tracing the definition scope and methodologies of architectural and environmental studies with a foreword by

Susannah Hagan **Basics Design Methods** Kari Jormakka, 2017-05-22 Architects often employ design methods to help them find more creative forms. These methods make it possible to break free of the traditional canon of forms and established paradigms. At the same time, there must be enough leeway for a functional systematic design conception to take shape. This volume focuses in depth on the design methods that have decisively shaped current architectural practice. Themes are Diagrammatic methods using drawings and schematic representations. Mimetic methods imitative. Parametric methods using a characteristic quantity. Automated and digital design methods of the contemporary avant garde e.g. scaling, datascares, folding and morphing.

Metaphoric Architecture Michael C. Abrams, 2025-07-14 *Metaphoric Architecture* focuses on a fundamental but often challenging part of the beginning design phases: how to take an abstract idea and transform it into a three-dimensional object, space, or building. Through media experimentation, analysis of innovative case studies, and hands-on exercises, Abrams guides the reader through the early stages of design, which include site and precedent analysis among other initial approaches. To comprehend design thinking, the visual arts, music, and film are examined in relation to architecture. Chapters demonstrate how abstract ideas inspired by paintings, music, and films can be utilized in the spatial design process and transformed into habitable spaces. There are 22 exercises that increase in complexity to strengthen students' abilities and promote the use of digital and manual representation in a back-and-forth motion. With 444 illustrations, this book demystifies the process of designing 3D form and space in a highly visual way. It will be the ideal studio companion for beginning and intermediate students of both architecture and interior design, with a wide range of architectural lessons that include abstraction, design fundamentals, concept development, building design, case study analysis, and site-to-building relationships.

Essays on the Intersection of Music and Architecture Mikesch W. Muecke, Miriam S. Zach, 2007 *Essays on the Intersection of Music and Architecture* is a collection of nine texts written by international scholars. Most of the essays were originally presented at the interdisciplinary conference *Architecture Music Acoustics* that took place in Toronto, Canada, in June 2006 at Ryerson University. The texts range from historiographical and theoretical explorations of the relations between music and architecture via translations of architectural spaces into music to analytical case studies of architectural spaces for musical performance. The book includes illustrations, author biographies, and an index.

The Grove Encyclopedia of American Art Joan M. Marter, 2011 Arranged in alphabetical order, these 5 volumes encompass the history of the cultural development of America with over 2300 entries.

Approaches to Drawing in Architectural and Urban Design Fabio Colonnese, Nuno Grancho, Robin Schaefferbeke, 2024-04-04 Architects draw for a variety of purposes: they draw to assimilate places and precedents to generate ideas; to develop a concept into a consistent project; in a team to communicate ideas and solutions to patrons and clients; and to guide building contractors during the construction stages as well as to produce further elaborations in order to publish their project in a treatise, a journal, or their own portfolio. Most importantly, architects draw to think and to manage complexity in a visual way. By taking into account innovative and interdisciplinary uses of architectural

drawing in the design process both historical and current the collection of chapters and interviews in this book frames a new critical perspective and a uniquely contextual appreciation of drawing as a way to encourage spatial thinking and practice in architecture and urbanism The authors take the discussion to a new level of philosophical sophistication while also considering drawing in relation to a series of specific engagements with urban development planning and architecture
