medical researchers and physiologists *The Social Context of Coping* John Eckenrode, 2013-12-11 I am very pleased to have been asked to do a brief foreword to this second CRISP volume *The Social Context of Coping*. I know most of the participants and their work and respect them as first rate and influential research scholars whose research is at the cusp of current concerns in the field of stress and coping. Psychological stress is central to human adaptation. It is difficult to visualize the study of adaptation, health, illness, personal soundness and psychopathology without recognizing their dependence on how well people cope with the stresses of living. Since the editor John Eckenrode has portrayed the themes of each of the chapters in his introduction, I can limit myself to a few general comments about stress and coping. Stress research began as unexplored fields often do with very simple should I say simplistic ideas about how to define the concept. Early approaches were unidimensional and input/output in outlook modeled implicitly on Hooke's late 17th century engineering analysis in which external load was an environmental stressor, stress was the area over which the load acted and strain was the deformation of the structure such as a bridge or building.

A Research Primer for the Social and Behavioral Sciences Miriam Schapiro Grosof, Hyman Sardy, 2014-05-10 A Research Primer for the Social and Behavioral Sciences provides an introductory but comprehensive overview of the research process that primarily concerns human subjects. This book discusses the methods of acquiring knowledge, importance of a well chosen problem, review of the literature and relationship between theory building and hypothesis testing. The common sources of invalidity in practice, non experimental research types, Stevens classification of scales and estimation based on probabilistic sampling are also elaborated. This text likewise covers the role of computer in research techniques for analysis of data, univariate and bivariate statistics and assumptions underlying analysis of variance. Other topics include the canonical correlation analysis, non parametric analysis of variance, deterministic problem analysis techniques and common errors in presentation of findings. This publication is intended for novice investigators in the broad category of social and behavioral sciences.
