Students Memory:

Memory at Work in the Classroom: Strategies to Help Underachieving Students Francis Bailey, Ken Pransky, 2014-03-04 Why do some students struggle to understand and retain information while other students don't? The answer may well lie in the memory system which is the root of all learning. In Memory at Work in the Classroom Francis Bailey and Ken Pransky expertly guide you through the aspects of human memory most relevant to classroom teachers. Real classroom examples help to deepen your understanding of how memory systems play a central role in the learning process as well as how culture plays a sometimes surprising role in memory formation and use. The memory systems covered in the book are Working Memory the gateway to learning, Executive Function the cognitive skills children need to independently orchestrate their memory systems in service to learning, Semantic Memory the storehouse of a person's knowledge of the world including academic concepts and the part of the memory system most affected by culture, Episodic Memory rich multisensory personal memories of specific events, Autobiographical Memory one's sense of self tied directly to student motivation. Although the techniques described apply to all students, the authors concentrate on explaining the source of struggling students' academic challenges and provide effective strategies for helping students become better learners. Whether you're a new or a veteran teacher, this book will offer fresh insights into your students' learning difficulties and move you to explore classroom practices that align with the functioning of memory and the ways students learn.

Memory Bennett L. Schwartz, 2024-04-18 Memory Foundations and Applications covers key memory models, theories, and experiments and demonstrates how students can improve their own ability to learn and remember. The new Fifth Edition includes research updates throughout, attention to individual, cross-linguistic, and cross-cultural differences, and support with how to assess evidence while minimizing personal bias to help students evaluate claims.

The Memory and Processing Guide for Neurodiverse Learners Alison Patrick, 2020-06-18 Armed with the wealth of understanding and strategies in this guide, students will discover how they can learn best to make studying and revision more effective and less stressful. Packed with simple, tried, and tested strategies and workarounds, this study guide for supporting kids and teens who learn differently, such as those with ADHD, dyslexia, dyspraxia, or ASD, explains what memory and processing issues are and how to work around them. Written by a tutor and specialist with years of experience of working with students with learning differences, this book enables the student to understand the best ways they learn and the reasons behind this. Unpacking processing speed, sensory processing, metacognition, and executive functioning, including working memory, this uniquely relatable and empowering study guide will provide students with the self-understanding they need to manage exams and academic tasks at school with confidence and peace of mind.
