Singular Sets of Minimizers for the Mumford-Shah Functional Guy David, 2005-03-22 The Mumford Shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory The main object under scrutiny is a free boundary K where the minimizer may have jumps The book presents an extensive description of the known regularity properties of the singular sets K and the techniques to get them It is largely self contained and should be accessible to graduate students in analysis The core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way

Isomorphisms Between H^1 Spaces Paul F.X. Müller, 2005-04-20 This book gives a thorough and self contained presentation of H^1 its known isomorphic invariants and a complete classification of H^1 on spaces of homogeneous type The necessary background is developed from scratch This includes a detailed discussion of the Haar system together with the operators that can be built from it Complete proofs are given for the classical martingale inequalities and for large deviation inequalities Complex interpolation is treated Throughtout special attention is given to the combinatorial methods developed in the field An entire chapter is devoted to study the combinatorics of coloured dyadic Intervals
