

TYPES OF SELECTIVE CONTROL

- **Selective credit controls**

- Selective methods of credit control regulate the use of credit by discriminating between essential and non-essential purposes.
- * The central bank may prohibit or caution banks against particular type of securities.
- May prescribe margins against secured advances.

Selective credit control refers to the use of policy measures by central banks or other regulatory authorities to influence the availability and cost of credit for specific sectors or purposes. The aim is to promote desired economic outcomes, such as price stability, economic growth, or sectoral development.

There are several types of selective credit controls, which differ in terms of their target, scope, and instruments. Some of the most common types are:

1. **Quantitative credit controls:** These refer to the use of direct limits on the amount of credit that can be extended by banks or other financial institutions. Examples include credit ceilings, credit quotas, and credit freezes. The purpose of these controls is to restrain excessive credit growth and reduce the risk of inflation or financial instability. However, they may also lead to credit rationing, disintermediation, or distortion of market signals.
2. **Qualitative credit controls:** These refer to the use of indirect measures to regulate the quality, terms, or purpose of credit. Examples include margin requirements, loan-to-value ratios, collateral requirements, and credit rating standards. The purpose of these controls is to steer credit towards productive or priority sectors, discourage speculative or risky lending, or mitigate credit risk. However, they may also raise the cost of credit, reduce the efficiency of intermediation, or create unintended consequences.
