Krantz, 2019-11-25 A companion to Mathematical Apocrypha published in 2002 this second volume of anecdotes stories quips and ruminations about mathematics and mathematicians is sure to please It differs from other books of its type in that many of the stories are from the twentieth century and many about currently living mathematicians A number of the best stories come from the author's first hand experience The writing is lively engaging and informative There are stories the reader may wish to share with students and colleagues friends and relatives The purpose of the book is to explore and to celebrate the many facets of mathematical life The stories reveal mathematicians as intense human and sympathetic They should resonate with readers everywhere This book will appeal to students from high school through graduate school to faculty and mathematical scientists of all stripes and also to physicists engineer and anyone interested in mathematics

Stories about Maxima and Minima Vladimir Mikhailovich Tikhomirov, 1990 Throughout the history of mathematics maximum and minimum problems have played an important role in the evolution of the field Many beautiful and important problems have appeared in a variety of branches of mathematics and physics as well as in other fields of sciences The greatest scientists of the past Euclid Archimedes Heron the Bernoullis Newton and many others took part in seeking solutions to these concrete problems The solutions stimulated the development of the theory and as a result techniques were elaborated that made possible the solution of a tremendous variety of problems by a single method This book copublished with the Mathematical Association of America MAA presents fifteen stories designed to acquaint readers with the central concepts of the theory of maxima and minima as well as with its illustrious history Unlike most AMS publications the book is

accessible to high school students and would likely be of interest to a wide variety of readers In Part One the author familiarizes readers with many concrete problems that lead to discussion of the work of some of the greatest mathematicians of all time Part Two introduces a method for solving maximum and minimum problems that originated with Lagrange While the content of this method has varied constantly its basic conception has endured for over two centuries The final story is addressed primarily to those who teach mathematics for it impinges on the question of how and why to teach Throughout the book the author strives to show how the analysis of diverse facts gives rise to a general idea how this idea is transformed how it is enriched by new content and how it remains the same in spite of these changes

Fields Medallists' Lectures

Michael Atiyah, Daniel Iagolnitzer, 1997-10-13 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with Nobel Prizes The restriction to 40 years is of marginal significance since most mathematicians have made their mark long before this age A list of Fields Medallists and their contributions provides a bird's eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from 22 Fields Medallists and so provides a highly interesting and varied picture The contributions themselves represent the choice of the individual Medallists In some cases the articles relate directly to the work for which the Fields Medals were awarded In other cases new articles have been produced which relate to more current interests of the Medallists This indicates that while Fields Medallists must be under 40 at the time of the award their mathematical development goes well past this age In fact the age limit of 40 was chosen so that young mathematicians would be encouraged in their future work The Fields Medallists Lectures is now available on CD ROM Sections can be accessed at the touch of a button and similar topics grouped together using advanced keyword searches
