Terrestrial Biospheric Carbon Fluxes Quantification of Sinks and Sources of CO₂ Joe Wisniewski, R. Neil Sampson, 2012-12-06 Towards the Balance and Management of the Carbon Budget of the Biosphere The current state of misunderstanding of the global C cycle and our failure to resolve an issue that has been debated for 100 years Jones and Henderson Sellers 1990 speaks loudly about the limitations of modern science when faced with the complexity of the biosphere Efforts to understand and balance the global C budget have gone through several phases First was a holistic view of the C budget as part of efforts to understand the geochemistry of the Earth e.g. Clarke 1908 Next came a period of data collection and synthesis which focused on the diversity of sectors of the biosphere This phase culminated in the early 1970s with the realization that humans were greatly impacting the global C cycle as measured at the Mauna Loa Observatory Keeling et al 1973 New syntheses of the global C budget emerged at this time Woodwell and Pacan 1973 Bolin et al 1979 The next phase was one of controversy and intense focus on particular sectors of the biosphere The controversy rested on discrepancies about the role of the terrestrial biota in the global C cycle and the failure to account for sufficient C sinks to absorb all the C emitted by land use change in the tropics Woodwell et al 1978 1983 Houghton et al 1983

Forest Ecosystems, Forest Management and the Global Carbon Cycle Michael J. Apps, David T. Price, 2013-06-29 Globally forest vegetation and soils are both major stores of terrestrial organic carbon and major

contributors to the annual cycling of carbon between the atmosphere and the biosphere Forests are also a renewable resource vital to the everyday existence of millions of people since they provide food shelter fuel raw materials and many other benefits The combined effects of an expanding global population and increasing consumption of resources however may be seriously endangering both the extent and future sustainability of the world's forests About thirty chapters cover four main themes the role of forests in the global carbon cycle effects of past present and future changes in forest land use the role of forest management products and biomass on carbon cycling and socio economic impacts *Global Environmental Change* National Research Council,Policy Division,Board on Sustainable Development,Committee on Global Change Research,1999-09-14 How can we understand and rise to the environmental challenges of global change One clear answer is to understand the science of global change not solely in terms of the processes that control changes in climate and the composition of the atmosphere but in how ecosystems and human society interact with these changes In the last two decades of the twentieth century a number of such research efforts supported by computer and satellite technology have been launched Yet many opportunities for integration remain unexploited and many fundamental questions remain about the earth's capacity to support a growing human population This volume encourages a renewed commitment to understanding global change and sets a direction for research in the decade ahead Through case studies the book explores what can be learned from the lessons of the past 20 years and what are the outstanding scientific questions Highlights include Research imperatives and strategies for investigators in the areas of atmospheric chemistry climate ecosystem studies and human dimensions of global change The context of climate change including lessons to be gleaned from paleoclimatology Human responses to and forcing of projected global change This book offers a comprehensive overview of global change research to date and provides a framework for answering urgent questions **Managing Forest Carbon in a Changing Climate**

Mark S. Ashton,Mary L. Tyrrell,Deborah Spalding,Bradford Gentry,2012-01-06 The aim of this book is to provide an accessible overview for advanced students resource professionals such as land managers and policy makers to acquaint themselves with the established science management practices and policies that facilitate sequestration and allow for the storage of carbon in forests The book has value to the reader to better understand a carbon science and management of forests and wood products b the underlying social mechanisms of deforestation and c the policy options in order to formulate a cohesive strategy for implementing forest carbon projects and ultimately reducing emissions from forest land use
