Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1972 *Immunology of Renal Disease* C.D. Pusey, 2012-12-06 Although it has been appreciated for many years that immune processes underlie most types of glomerulonephritis it is the recent explosion in knowledge of cellular and molecular immunology that has prompted another book on the subject The understanding of the mechanisms involved in renal injury requires the integration of information from in vitro cell culture systems experimental models of disease and clinical studies This volume draws on all of these sources in an attempt to explain current concepts of nephritis Increased emphasis is placed on autoimmune processes as opposed to the deposition of circulating immune complexes although it will be apparent that these may overlap in the area of in situ immune complex formation Of central importance in autoimmunity is the relationship between antigen presenting cells including B cells expressing MHC class II molecules autoantigenic peptides T helper lymphocytes and various effector cells The mechanisms by which the immune system may lead to tissue injury are also becoming better understood and consideration is given to the role of inflammatory cells the complement proteins and soluble factors such as cytokines and eicosanoids Paediatric Allergy and Clinical Immunology (As Applied to Atopic Disease) Cecil Collins-Williams, 1973-12-15 This is a practical reference volume for the student or practising physician to aid him in the investigation diagnosis and treatment of allergy in children It is based on procedures used at The Hospital for Sick Children in Toronto Canada In this new fourth edition material has been added and established treatments updated The allergies to which children are subject are discussed in clear straightforward language as are the basic principles of atopic disease There are sections on prophylaxis of allergy common mistakes in the care of the allergic patient the optimistic approach to the care of the allergic patient anaphylaxis in man and the immunoglobulins Each section is documented Four appendices offer various diets and discuss immunological deficiency diseases beta adrenergic blockade and the pathophysiology of asthma *New perspectives in clinical microbiology* W. Brumfitt, 2012-12-06 If the organizers of the excellent symposium on which this book is based had wanted to devise an appropriate dramatic opening they could not have done better than to have the first speaker fail to appear because he was incarcerated in his high security isolation unit caring for a patient suffering from green monkey disease In his consequently undelivered paper now published in this book he understandably dwells a little on the place both philosophical and physical of the laboratory in the investigation of highly transmissible infections and this subject characterizes the two themes that run through the chapters of this book the relative roles of microbiologist and clinician in the investigation and management of infected patients and the techniques management and diseases most recently to come under scrutiny In addition to some airing of the question which some of us regard as pressing as to what degree the microbiologist should be clinical and the clinician microbiological there is welcome attention by the clinical haematologist and immunologist to humoral and cellular factors in infection that are acknowledged to be crucial but relative
