Cellular Organisation

GROWTH

- It is the increase in number, mass and size of cells.
- In plants, growth by cell division occurs continuously throughout their life span.
- In animals, growth is only up to a certain age. However, cell division occurs in certain tissues to replace lost cells.
- Non-living objects grow by accumulation of material on the surface. In living organisms, growth is from inside.

REPRODUCTION

- It is the production of progeny having features similar to those of parents.
- Organisms reproduce asexually and sexually.
- Growth is the increase in cell number or mass. Hence in unicellular organisms, growth & reproduction are same.
- Many organisms do not reproduce (e.g. mules, worker bees, infertile human couples, etc). Hence, reproduction is not a perfect defining characteristic of living organisms.
