Dielectric Elastomers as

Electromechanical Transducers Federico Carpi, Danilo De Rossi, Roy Kornbluh, Ronald Edward Pelrine, Peter Sommer-Larsen, 2011-09-06 Dielectric Elastomers as Electromechanical Transducers provides a comprehensive and updated insight into dielectric elastomers one of the most promising classes of polymer based smart materials and technologies This technology can be used in a very broad range of applications from robotics and automation to the biomedical field The need

for improved transducer performance has resulted in considerable efforts towards the development of devices relying on materials with intrinsic transduction properties. These materials, often termed as smart or intelligent, include improved piezoelectrics and magnetostrictive or shape memory materials. Emerging electromechanical transduction technologies based on so-called ElectroActive Polymers (EAP) have gained considerable attention. EAP offer the potential for performance exceeding other smart materials while retaining the cost and versatility inherent to polymer materials. Within the EAP family, dielectric elastomers are of particular interest as they show good overall performance, simplicity of structure, and robustness. Dielectric elastomer transducers are rapidly emerging as high performance pseudo-muscular actuators useful for different kinds of tasks. Further, in addition to actuation, dielectric elastomers have also been shown to offer unique possibilities for improved generator and sensing devices. Dielectric elastomer transduction is enabling an enormous range of new applications that were precluded to any other EAP or smart material technology until recently. This book provides a comprehensive and updated insight into dielectric elastomer transduction, covering all its fundamental aspects. The book deals with transduction principles, basic materials properties, design of efficient device architectures, material and device modelling, along with applications. Concise and comprehensive treatment for practitioners and academics. Guides the reader through the latest developments in electroactive polymer-based technology. Designed for ease of use, with sections on fundamentals, materials, devices, models, and applications.

Automatic Control in Aerospace 1992 D.B. DeBra, E. Gottzein, 2017-01-11. Space vehicles have become increasingly complex in recent years, and the number of missions has multiplied as a result of extending frontiers in the exploration of our planetary system and the universe beyond. The advancement of automatic control in aerospace reflects these developments. Key areas covered in these proceedings include the size and complexity of spacecrafts and the increasingly stringent performance requirements to be fulfilled in a harsh and unpredictable environment; the merger of space vehicles and airplanes into space planes to launch and retrieve payloads by reusable winged vehicles; and the demand to increase space automation and autonomy to reduce human involvement as much as possible in manned, man-tended, and unmanned missions. This volume covers not only the newly evolving key technologies but also the classical issues of guidance, navigation, and control.

Smart Structures Vinod K. Wadhawan, 2007-10-18. Smartness is often associated with living beings as they can adapt themselves to changing situations. Artificial smart structures are designed to mimic biological structures to a small or large extent. This book gives a comprehensive account of how this can be done. It will be of interest to students and professionals in science and engineering.

Optical Fiber Sensor Technology L.S. Grattan, B.T. Meggitt, 2013-03-09. Systems and Applications in Optical Fiber Sensor Technology. The essential technology which underpins developments in optical fiber sensors continues to expand and continues to be driven to a very large extent by advances in optoelectronics which have been produced for the ever-expanding optical communications systems and networks of the world. The steps forward in the

technology often accompanied by a reduction in the price of associated components have been and continue to be adapted for use in a wide variety of optical fiber sensor systems. These include for example the use of photoinduced gratings as fiber sensor components coupled with the wider availability of shorter wavelength lasers, bright luminescent sources and high sensitivity detectors which have opened up new possibilities for both novel fiber optic sensor applications and new sensing systems. This is to be welcomed at a time when coupled with integrated optic miniaturized devices and detectors, real possibilities of systems integration at lower cost and increased utility can be offered. The fiber laser and the expansions of the types and availability of the doped fiber on which it is based offer further examples of the integration of the essential components of advanced optical sensor systems fitted for a new range of applications. **Adaptronics and Smart**

Structures Hartmut Janocha, 2013-11-11 Adaptronics is the term encompassing technical fields that have become known internationally under the names smart materials, intelligent structures and smart structures. Adaptronics contributes to the optimisation of systems and products. It bridges the gap between material and system or product and incorporates the search for multi functional materials and elements and their integration in systems or structures. The authors of this book have taken on the task of displaying the current state of the art in this fascinating field. The system components, actuators, sensors and controllers, technical fundamentals, materials, design rules and practical solutions are all described. Selected sample applications are also presented and current development trends are demonstrated. *Measurement Technology and*

Intelligent Instruments VI Yongsheng Gao, Shuetfung Tse, Wei Gao, 2005-10-15 The requirements of high precision and of high quality components and devices in meeting the needs of modern industry and society in disciplines such as semiconductors, optics, nanotechnology, MEMS, manufacturing, biomedical and environmental engineering make measurement technology and intelligent instruments which sense, measure and report more important than ever and essential for the rapid development of information technology. Following the lead of the previous five publications (1989, 1993, 1996, 1998, 2001) in the series *Measurement Technology and Intelligent Instruments*, this book presents the most recent advances in this important field. In all 123 papers were contributed from many regions of the world including China, Taiwan, China, Japan, Russia, Hong Kong, China, Germany, Australia, Austria, Canada, Korea, Poland, Slovakia and the UK and US.
