Introductory Petrography of Fossils Alan S. Horowitz, Paul E. Potter, 2012-12-06 This is a book for beginners Not geological beginners because an introductory course in paleontology and some knowledge of the petrographic microscope is assumed but for beginners in the study of the petrography of fossil constituents in sedimentary rocks Fossils are studied for various reasons 1 to provide chron ologic time frameworks 2 to delineate rock units and ancient environments or 3 to understand the past development evolu tion of living plants and animals All of these uses may be at tained through petrographic studies of thin sections of fossils embedded in sedimentary rocks Some knowledge of the appear ance of fossils in thin section is also fundamental for general stratigraphic studies biofacies analyses and is even useful in studying some metamorphic rocks Commonly fossils are essen tial for the

delineation of carbonate rock types facies or bio facies We have written this book for sedimentary petrologists and stratigraphers who routinely encounter fossils as part of their studies but who are not specialists in paleontology and for students who are seeking a brief review and an introduction to the literature of the petrography of fossiliferous sedimentary rocks Although experienced paleontologists may be appalled by the many generalized statements on size shape and principal fossil characters recited herein we counter that we have had some success in introducing non paleontologically oriented geologists to the use and identification of fossil constituents without using excessive paleontological terminology and detailed systematics

Hansen, 2012-12-06 From the Foreword Predator prey interactions are among the most significant of all organism organism interactions It will only be by compiling and evaluating data on predator prey relations as they are recorded in the fossil record that we can hope to tease apart their role in the tangled web of evolutionary interaction over time This volume compiled by a group of expert specialists on the evidence of predator prey interactions in the fossil record is a pioneering effort to collate the information now accumulating in this important field It will be a standard reference on which future study of one of the central dynamics of ecology as seen in the fossil record will be built Richard K Bambach Professor Emeritus Virginia Tech Associate of the Botanical Museum Harvard University
