CASE STUDIES

- Case studies are descriptions of real situations that provide a context for engineers to explore decision-making in the face of socio-technical issues.

- Case studies typically involve complex issues where there is no single correct answer.

- Most engineering case studies available related to engineering ethics.

- The process of analyzing a case study encourages several learning tasks:

- Exploring the nature of a problem and circumstances that affect a decision or solution.

- Sensitivity to ethical issues, sometimes called "developing a moral imagination," or the awareness of the needs of others and that there is

Specification Case Studies in RAISE Hung Dang Van,2002-02-08 This volume presents twelve case studies that use RAISE Rigorous Approach to Industrial Software Engineering to construct analyse develop and apply formal specifications The case studies cover a wide range of application areas including government finance case based reasoning multi language text processing object oriented design patterns component based software design and natural resource management By illustrating the variety of uses of formal specifications the case studies also raise questions about the creation purpose and scope of formal models before they are built Additional resources and complete specifications for all of the case studies and the RAISE tools used to process them are available on the World Wide Web This book will be of particular interest to software engineers especially those responsible for the initial stages of requirements engineering and software architecture and design It will also be of interest to academics and students on advanced formal methods courses Specification of Drug Substances and Products Christopher M. Riley,K. Lien Nguyen,2024-09-22 Specification of Drug Substances and Drug Products is a fully comprehensive reference on Specification Setting for Pharmaceuticals There have been several recent developments in the ICH Guidelines which were not captured in previous editions notably the new guideline on Development of Analytical Procedure and the revisions to the validation guidelines and the specification guidelines This edition contains chapters discussing the unique requirements for the universal critical quality attributes as well as the specific tests required to characterize and control different types of products ranging in complexity from small molecules in immediate release oral dosage forms to complex products such as drug antibody conjugates and mRNA based products This substantially expanded revision of the 2nd edition will serve as practical comprehensive reference for scientists managers educators and consultants involved in the development and regulation of pharmaceutical products Presents critical assessment potential impact and application of the recent revisions to ICH guidelines on method validation Q2 as well as the latest guideline on Analytical Method Development Q14 and the special regional requirements in non ICH regions Addresses comprehensive treatment of the development and validation of analytical methodologies used in the analysis control and specification of a variety of different types of dosage forms ranging from traditional oral solid dosage forms to proteins nRNA based drugs vaccines and gene therapy This book will also address drug device combinationproducts such as digital drug delivery systems transdermal systems and inhalation products Presents detailed treatment of latest statistical approaches including new approaches to the treatment of validation data method specification setting and shelf life prediction based on stability data ECOOP 2005 - Object-Oriented Programming Andrew Black,2005-07-18 The 19th Annual Meeting of the European Conference on Object Oriented Programming ECOOP 2005 took place during the last week of July in Glasgow Scotland UK This volume includes the refereed technical papers p sented at the conference and two invited papers It is traditional to preface a volume of proceedings such as this with a note that emphasizes the importance of the conference in its respective eld Although such

self evaluations should always be taken with a large grain of salt ECOOP is undisputedly the pre inent conference on object orientation outside of the United States In its turn object orientationis today s principaltechnology not only for programming but also for design analysisand speci cation of softwaresystems As a consequence ECOOP has expanded far beyond its roots in programming to encompass all of these areas of research whichis why ECOOP has remained such an interesting conference But ECOOP is more than an interesting conference It is the nucleus of a technical and academic community a community whose goals are the creation and dissemination of new knowledge Chance meetings at ECOOP have helped to spawn collaborations that span the boundaries of our many subdisciplines bring together researchers and practitioners cross cultures and reach from one side of the world to the other The ubiquity of fast electronic communication has made maintaining these collaborations easier than we would have believed possible only a dozen years ago But the role of conferences like ECOOP in establishing collaborations has not diminished **Theories of Programming and Formal Methods** Jonathan P. Bowen,Qin Li,Qiwen Xu,2023-09-07 This Festschrift volume dedicated to Jifeng He on the occasion of his 80th birthday includes refereed papers by leading researchers many of them current and former colleagues presented at a dedicated celebration in the Shanghai Science Hall in September 2023 Jifeng was an important researcher on the European ESPRIT ProCoS project and the Working Group on Provably Correct Systems subsequently he collaborated with Tony Hoare on Unifying Theories of Programming Jifeng returned to China in 1998 first to the United Nations University in Macau and then to the East China Normal University in Shanghai He has since founded an Artificial Intelligence research institute that focuses on the application of technology in large scale industrial software systems His scientific contributions have been recognized through his election to membership of the Chinese Academy of Sciences The first paper in the volume provides an overview of Jifeng s research contributions especially in the area of formal methods and the following two papers detail developments in UTP and rCOS refinement calculus of object systems In the next two sections of the book the editors included papers by colleagues and coauthors of Jifeng while he was at the University of Oxford and engaged with the European ProCoS project The section that follows includes papers authored by colleagues from his later research in China and Europe The final section includes a paper related to Jifeng s recent roadmap for UTP *Models, Algebras and Logic of Engineering Software* Manfred Broy,Markus Pizka,2003 This volume focuses on the education of researchers teachers students and practitioners As usual in engineering a study and application of the relevant branches of mathematics is crucial both in education and practice **Transputers and Parallel Applications** John Hulskamp,David Jones,1992-11 Presents the proceedings of a Transputer and OCCAM User Group Conference held in Melbourne in November 1992 discussing recent developments in the field of transputers and parallel applications Solving Fault Diagnosis Problems Andreas Varga,2017-02-14 This book addresses fault detection and isolation topics from a computational perspective Unlike most existing literature it bridges the gap between the existing well developed theoretical results and the realm of reliable

computational synthesis procedures The model based approach to fault detection and diagnosis has been the subject of ongoing research for the past few decades While the theoretical aspects of fault diagnosis on the basis of linear models are well understood most of the computational methods proposed for the synthesis of fault detection and isolation filters are not satisfactory from a numerical standpoint Several features make this book unique in the fault detection literature Solution of standard synthesis problems in the most general setting for both continuous and discrete time systems regardless of whether they are proper or not consequently the proposed synthesis procedures can solve a specific problem whenever a solution exists Emphasis on the best numerical algorithms to solve the synthesis problems for linear systems in generalized state space form also known as descriptor systems Development of general synthesis procedures relying on new computational paradigms such as factorization based design based on filter updating techniques and nullspace based synthesis Availability of a comprehensive set of free accompanying software tools for descriptor systems which allows readers to easily implement all synthesis procedures presented in the book and ensures that all results are reproducible This book is primarily intended for researchers and advanced graduate students in the areas of fault diagnosis and fault tolerant control It will also appeal to mathematicians with an interest in control oriented numerics **Logics of Specification Languages** Dines Bjørner,Martin C. Henson,2007-12-05 This book presents comprehensive studies on nine specification languages and their logics of reasoning The editors and authors are authorities on these specification languages and their application In a unique feature the book closes with short commentaries on the specification languages written by researchers closely associated with their original development The book contains extensive references and pointers to future developments Attributed Algebraic Specifications Bernhard Bauer,1996 Programming Languages and Systems Chung-Kil Hur,2023-11-22 This book constitutes the refereed proceedings of the 21st Asian Symposium on Programming Languages and Systems APLAS 2023 held in Taipei Taiwan during November 26 29 2023 The 15 full papers included in this book are carefully reviewed and selected from 32 submissions They were organized in topical sections as follows semantics logics and foundational theory design of languages type systems and foundational calculi domain specific languages compilers interpreters and abstract machines program derivation synthesis and transformation program analysis verification and model checking logic constraint probabilistic and quantum programming software security concurrency and parallelism tools and environments for programming and implementation and applications of SAT SMT to programming and implementation *Encyclopedia of Information Science and Technology* Mehdi Khosrow-Pour,Mehdi Khosrowpour,2009 This set of books represents a detailed compendium of authoritative research based entries that define the contemporary state of knowledge on technology Provided by publisher **High-Integrity System Specification and Design** Jonathan P.
