Speech Science Technology:

Science, technology and art in the spoken expression of meaning Plinio Almeida Barbosa, Sandra Madureira, Åsa Abelin, 2023-08-31 **Speech Dynamics** Felicitas Kleber, Tamara Rathcke, 2024-10-07 The relationship between diachronic change and synchronic variation at the articulatory auditory acoustic and social level is one of the greatest puzzles in the study of language Even though plentiful examples exist to suggest that dynamics of synchronic variation and diachronic change are tightly interconnected a unified theory to account for language change in its relationship to all layers of synchronic variation remains a desideratum This volume compiles new evidence from articulatory acoustic auditory sociolinguistic and phonological analyses of segmental and prosodic data and computational modelling and offers a refreshing theoretical angle on the ongoing debates in language change The volume is divided into three sections each focusing on one aspect of speech dynamics the historical the emerging and the theoretical each making a step toward a unified view of speech dynamics at the interface of synchronic variation and diachronic change The large range of methodologies and theories represented in this book will appeal to scholars from a variety of linguistic fields with an interest in speech dynamics including phoneticians phonologists sociolinguists typologists computational and historical linguists

The

Construction of Words Geert Booij, 2018-04-13 This volume focuses on detailed studies of various aspects of Construction Morphology and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions that is pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms and they motivate the properties of existing complex words. Both schemas and individual words are stored and hence there is no strict separation of lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing and language change.
